2013 IEEE Symposium on Computational Intelligence in Control and Automation

(CICA 2013)

Singapore
16-19 April 2013
## TABLE OF CONTENTS

Enhanced Monitoring using PCA-based GLR Fault Detection and Multiscale Filtering ................................................................. 1  
Fouzi Harrou, Mohamed N. Nounou, Hazem N. Nounou

A Robust Fault Detection Scheme with an Application to Mobile Robots by using Adaptive Thresholds Generated with Locally Linear Models ................................................................................................................................. 9  
Farzad Baghernejhad, K. Khorasani

Fault Diagnosis of Induction Motor Using CWT and Rough-Set Theory .......................................................................................... 17  
Pratyay Konar, Moumita Saha, Jaya Sil, Paramita Chattopadhyay

A New Eye Gaze Detection Algorithm Using PCA Features and Recurrent Neural Networks ......................................................... 24  
Thai-Hoang Huynh

Path Planning of a Data Mule in Wireless Sensor Network Using an Improved Implementation of Clustering-Based Genetic Algorithm ................................................................................................. 30  
Jing-Sin Liu, Shao-You Wu, Ko-Ming Chiu

Study on a Combined Scheme by Using T-S Fuzzy and TSMC Approaches .................................................................................. 38  
Sendren Sheng-Dong Xu, Yew-Wen Liang, Kuo-Chin Wang, Chih-Chiang Chen

Robust Output Feedback Control of T-S Fuzzy Time-delay Systems ............................................................................................ 45  
Chian-Song Chiu, Wen-Tsung Yang, Tung-Sheng Chiang

Output Tracking of Fractional-Order Nonlinear Systems via TS-FCMAC .............................................................................................. 51  
Tung-Sheng Chiang, Chian-Song Chiu

Optimization of Fuzzy Logic Controllers with Rule Base Size Reduction using Genetic Algorithms .......................................................... 57  
Pintu Chandra Shill, Yoichiro Maeda, Kazuyuki Murase

Local Stability and Stabilization of Discrete-Time Takagi–Sugeno Fuzzy Systems using Bounded Variation Rates of the Membership Functions ................................................................................................. 65  
Dong Hwan Lee

Enhanced Modeling of Distillation Columns using Integrated Multiscale Latent Variable Regression .................................................. 73  
Muddu Madakyaru, Mohamed N. Nounou, Hazem N. Nounou

Nonlinear Latent Variable Regression ............................................................................................................................................. 81  
Muddu Madakyaru, Mohamed N. Nounou, Hazem N. Nounou

Modeling and Analyzing Technical Systems as Complex Networks: Detecting Inverse Response ............................................................ 89  
Andreas Geiger, Andreas Kroll

Mobile Augmented Reality Based Interactive Teaching & Learning System with Low Computation Approach ............................................. 97  
Shitala Prasad, Sateesh K. Peddoju, Debashis Ghosh

Optimal Formation of Robots by Convex Hull and Particle Swarm Optimization ............................................................................. 104  
Jun Liu, Hongbin Ma, Xuemei Ren, Mengyin Fu

Minimal Overshoot Direct Torque Control for Permanent Magnet Synchronous Motors Using Hybrid Bacteria Foraging-Particle Swarm Optimization .................................................................................. 112  
Ehab H. E. Bayoumi

Fixed-Order H∞ Loop-Shaping Synthesis: A Time Domain Approach ............................................................................................... 120  
Philippe Feyel, Gilles Duc, Guillaume Sandou

An Effective Shuffled Frog-leaping Algorithm for the Flexible Job-shop Scheduling Problem ................................................................. 128  
Ye Xu, Ling Wang, Shengyao Wang

Adaptive Control and Synchronization of a Class of Chaotic Systems in Which All Parameters are Unknown ............................................. 135  
Chyan-Chau Fuh, Hsun-Heng Tsai

Application of Delay-Dependent Adaptive Control to a Continuous Stirred Tank Reactor ........................................................................... 140  
Hazem N. Nounou, Mohamed N. Nounou

Discrete Direct Adaptive ELM Controller for Seismically Excited Non-linear base-Isolated Buildings .......................................................... 148  
R. Sabasri, A. M. Natarajan, S. Suresh

Modelling of a 4WS4WD Vehicle and its Control for Path Tracking ................................................................................................. 155  
Michael R. Woods, Jay Katupitiya

Temperature Optimal Control of the Casting Billet Induction Heating Process Based on the BP Prediction Model ........................................................................................................................................ 163  
Xu Zhe, Pan Sanqiang

Design and Implementation of Fuzzy-Logic based Obstacle-Avoidance and Target-reaching Algorithms on NI’s Embedded-FPGA Robotic Platform ........................................................................................................ 168  
Muhammad Mysorewala, Khaled Alshehri, Eyad Alkhayat, Adnan Al-Ghusain, Omar Al-Yagoub
