2013 18th International Conference on Engineering of Complex Computer Systems

(ICECCS 2013)

Singapore
17-19 July 2013
Keynotes

Expressiveness of Notations for Reasoning about Concurrency ........................................1
   Cliff Jones

Hybrid Relation Calculus ........................................................................................................2
   Jifeng He

Goal Model Elaboration for Software Evolution .................................................................3
   Shinichi Honiden

System Modeling and Verification 1

Modeling and Verifying Real-Time Properties of Reactive Systems ....................................14
   Fenglin Han, Peter Herrmann, and Hien Le

Knowledge-Based Verification of Service Compositions—An SMT Approach .......................24
   Sven Walther and Heike Wehrheim

CosyVerif: An Open Source Extensible Verification Environment .......................................33
   Étienne André, Yousra Lembachar, Laure Petrucci, Francis Hulin-Hubard,
   Alban Linard, Lom Hillah, and Fabrice Kordon
System Evaluation
Measurements for Adaptation Level and Efficiency of Adaptive Software Systems ..............................................................37
  Wenpin Jiao

Network Performance Evaluation for Distributed Embedded Systems Using Feature Models .................................................46
  Martin Manderscheid and Christian Prehofer

A Model-Driven Approach for Evaluating System of Systems ..........................................................................................56
  Xiaokai Xia, Ji Wu, Chao Liu, and Luo Xu

Logic and Algorithm
An Adequate Logic for Heterogeneous Systems ..........................................................65
  Marc Aiguier, Boris Golden, and Daniel Krob

A Refinement Calculus for Promela ...........................................................................75
  Asankhaya Sharma

Reusing Search Tree for Incremental SAT Solving of Temporal Induction .................................................................85
  Liangze Yin, Fei He, Min Zhou, and Ming Gu

System Modeling and Verification 2
Formal Modelling and Analysis of AODV ..............................................................93
  Xiaofeng Wu, J.W. Sanders, and Huibiao Zhu

Spatio-temporal Properties Analysis for Cyber-physical Systems .................................................................101
  Zhucheng Shao, Jing Liu, Zuohua Ding, Mingsong Chen, and Ningkang Jiang

Using Bounded Fairness to Specify and Verify Ordered Asynchronous Multi-agent Systems ........................................111
  Qin Li and Graeme Smith

Automatic Analysis of TiMo Systems in PAT ...........................................................121
  Gabriel Ciobanu and Manchun Zheng

Real-Time Systems
Observer Patterns for Real-Time Systems ............................................................125
  Étienne André

Model-Based Verification of Energy-Aware Real-Time Automotive Systems .........................................................135
  Eun-Young Kang, Gilles Perrouin, and Pierre-Yves Schobbens

Tool Support for the Analysis of TADL2 Timing Constraints Using TimeSquare ....................................................145
  Arda Goknil, Julien DeAntoni, Marie-Agnès Peraldi-Frati, and Frédéric Mallet
Model-Driven Performance Prediction of Distributed Real-Time Embedded Defense Systems ................................................................. 155
Katrina Falkner, Vanea Chiprianov, Nickolas Falkner, Claudia Szabo,
James Hill, Gavin Puddy, Dan Fraser, Adrian Johnston, Marianne Rieckmann,
and Andrew Wallis

Short Papers Session 1
Web Services Testing via Goal and Mutation ................................................................................................................................. 159
M. Shaban Jokhio, Gillian Dobbie, Jing Sun, and Tianming Hu
GUI Ferret: GUI Test Tool to Analyze Complex Behavior of Multi-window Applications .................................................................................................................................................. 163
Hajime Nakajima, Takeshi Masuda, and Ikuya Takahashi
Merging Test Models ............................................................................................................................. 167
Mohamed Mussa and Ferhat Khendek
History-Based Test Case Prioritization with Software Version Awareness ................................................................. 171
Chu-Ti Lin, Cheng-Ding Chen, Chang-Shi Tsai, and Gregory M. Kapfhammer
Exploiting Concurrency for the ESB Architecture .................................................................................. 173
Ridha Benosman, Kamel Barkaoui, and Yves Albrieux

Non-functional Property Analysis: Security and Reliability
A Comprehensive Client-Side Behavior Model for Diagnosing Attacks in Ajax Applications ......................................................................................................................... 177
Xinshu Dong, Kailas Patil, Jian Mao, and Zhenkai Liang
Protecting Web Browser Extensions from JavaScript Injection Attacks ................................................................................. 188
Anton Barua, Mohammad Zulkernine, and Komminist Weldemariam
Automated Analysis of Reliability Architectures ...................................................................................... 198
Marco Bozzano, Alessandro Cimatti, and Cristian Mattarei
A Software Environment for Confining Malicious Android Applications via Resource Virtualization .................................................................................................................. 208
Xiaolei Li, Guangdong Bai, Zhenkai Liang, and Heng Yin

Software Engineering
How Do Developers Use APIs? A Case Study in Concurrency .................................................................................................... 212
Stefan Blom, Joseph Kiniry, and Marieke Huisman
Software Internationalization and Localization: An Industrial Experience ........................................................................ 222
Xin Xia, David Lo, Feng Zhu, Xinyu Wang, and Bo Zhou
Runtime Prediction of Failure Modes from System Error Logs .................................................................................................... 232
Atef Shalan and Mohammad Zulkernine
Orion: A Software Project Search Engine with Integrated Diverse Software Artifacts .......................................................................................................................................................................................242

   Tegawendé F. Bissyandé, Ferdian Thung, David Lo, Lingxiao Jiang,
   and Laurent Réveillère

Short Papers Session 2

Rigorous Analysis of Temporal Access Control Properties in Mobile Systems ........................................246

   Mustafa Al-Lail, Ramadan Abdunabi, Robert B. France, and Indrakshi Ray

CARE: A Platform for Reliable Comparison and Analysis
of Reverse-Engineering Techniques ........................................................................................................252

   Sylvain Lamprier, Nicolas Baskiotis, Tewfik Ziadi, and Lom Messan Hillah

Resilient Architecture for Complex Computing Systems ............................................................................256

   Ichiro Satoh

Linking Algebraic Semantics and Operational Semantics for Web Services
Using Maude ...............................................................................................................................................260

   Peng Liu, Huibiao Zhu, Shengchao Qin, Phillip J. Brooke, and Xi Wu

Game-Based Monitors for Scenario-Based Specification .............................................................................264

   Pengcheng Zhang, Jun Yu, Wenrui Li, and Hareton Leung

Author Index ..................................................................................................................................................268
