2013 Seventh International Conference on Software Security and Reliability Companion

SERE-C 2013

Table of Contents

Message from the Steering Committee Chairs ...................................................................................................................... ix
Message from the General Chair ................................................................................................................................................. x
Message from the Program Chair .............................................................................................................................................. xi
Message from the TC Workshop Chairs ................................................................................................................................. xii
Message from the IA Workshop Chair .................................................................................................................................... xiii
SERE 2013 Steering Committee ............................................................................................................................................... xiv
SERE 2013 Organizing Committee ........................................................................................................................................... xv
SERE 2013 TC Workshop Committee ..................................................................................................................................... xvi
SERE 2013 SSCPS Workshop Committee ............................................................................................................................ xvii

Workshop on Trustworthy Computing (TC 2013)

TC Workshop I – Mobile Security

Mobile Application Protection Solution Based on 3G Security Architecture and OpenID ......................................................... 1
   Xiang Feng, Yonghe Wu, and Xueqiang Yan

Designing an Enterprise Security Strategy for Mobile Intranet Access .................................................................................. 8
   Matthias Trojahn and Frank Ortmeier

On a High-Performance and Balanced Method of Hardware Implementation for AES ........................................................... 16
   Xiaotao Zhang, Hui Li, Shouwen Yang, and Shuangshuang Han

TC Workshop II – Fault Monitoring and Handling

PHP+MySQL Based Online Examination System with Power Failure Handling and Dropbox Capability ........................................ 21
   Afzaal Ahmad, Noor Ullah Khan, and Arbab Waseem Abbas

HyperVerify: A VM-assisted Architecture for Monitoring Hypervisor Non-control Data ...................................................... 26
   Baozeng Ding, Yeping He, Yanjun Wu, and Yuqi Lin

Verification of Secure Inter-operation Properties in Multi-domain RBAC Systems ................................................................. 35
   Antonios Gouglidis, Ioannis Mavridis, and Vincent C. Hu
TC Workshop III – Communication Reliability and Software Security
Robust and Efficient Covert Channel Communications in Operating Systems: Design, Implementation and Evaluation .................................................................45
Yuqi Lin, Liping Ding, Jingzheng Wu, Yalong Xie, and Yongji Wang
A Concept for Language-Oriented Security Testing .............................................................53
Philipp Zech, Michael Felderer, Matthias Farwick, and Ruth Breu

TC Workshop IV – Data Communication and Malware Classification
Hierarchical Identity Based Socket for Datacenters ......................................................................63
Tarun Sen and Sateesh K. Peddoju
Evaluation of Random Projection for Malware Classification .........................................................68
Stanislav Ponomarev, Jan Durand, Nathan Wallace, and Travis Atkison

TC Workshop V – Privacy Preservation
An Approach for Isolating the Sources of Information Leakage Exploited in Cache-Based Side-Channel Attacks ........................................................................74
Ali Can Atici, Cemal Yilmaz, and Erkay Savas
Preserving User Privacy in Pervasive Environments with a Collaborative Model ..................................84
Farzana Rahman, Md. Endadul Hoque, Sheikh I. Ahamed, and Mohammad Arif Ul Alam

Workshop on Information Assurance (IA 2013)
IA Workshop I – Security Testing and Availability Analysis
Automating Service Availability Analysis: An Application to a Highly Available Media-Streaming Service .............................................................................94
A. Kanso, M. Toeroe, and F. Khendek
A New Security Metric for SOA Implementations ........................................................................102
Dave Larson and Jigang Liu
Modeling Embedded Software Test Requirement Based on MARTE .............................................109
Wang Yichen, Lan Xinheng, and Wang Yikun

IA Workshop II – Fault Detection and Verification
The Time/State-based Software-Intensive Systems Failure Mode Researches ..................................116
Xuan Hu, Chunhui Yang, Dong Li, Yi Zhu, and Mengyue Liu
Multiple-Bug Oriented Fault Localization: A Parameter-Based Combination Approach ........................125
Zheng Wei and Bai Han
A Study on Airborne Software Safety Requirements Patterns ....................................................131
Chang Wei, Bao Xiaohong, and Li Xuefei
IA Workshop III – Software Analysis

Application of Software Safety Analysis Using Event-B ...............................................................................................................137
  Zhang Hong and Xu Lili

Dependability and Software Reuse — Coupling Them by an Industrial Standard .................................................................145
  Fevzi Belli

Reliability Models Applied to Mobile Applications ..................................................................................................................155
  Sonia Meskini, Ali Bou Nassif, and Luiz Fernando Capretz

IA Workshop IV — Data Analysis and Software Reliability

Of Massive Static Analysis Data ...................................................................................................................................................163
  Aurelien Delaitre, Vadim Okun, and Elizabeth Fong

A Categorical Approach for Modeling and Verifying Dynamic Software Architecture ..........................................................168
  Xiang Ling

Student Doctoral Program

hGuard: A Framework to Measure Hypervisor Critical Files .......................................................................................................176
  Baozeng Ding, Yeping He, Qiming Zhou, Yanjun Wu, and Jingzheng Wu

Behavioral Analysis of Android Applications Using Automated Instrumentation ..............................................................182
  Mohammad Karami, Mohamed Elsabagh, Parnian Najafiborzñjani, and Angelos Stavrou

Forced-Path Execution for Android Applications on x86 Platforms ..................................................................................188
  Ryan Johnson and Angelos Stavrou

SSCPS Workshop – Software Assurance and Reliable Communication Application

A High Reliable Communication Technology in Electric Vehicle Charging Station ..............................................................198
  Xiaona Wu, Yunwei Dong, Yongqi Ge, and Hongbin Zhao

Data Race Detection for Interrupt-Driven Programs via Bounded Model Checking ..........................................................204
  Xueguang Wu, Yanjun Wen, Liqian Chen, Wei Dong, and Ji Wang

Supporting Automatic Code Review via Design ...........................................................................................................................211
  Jiantao He, Linzhang Wang, and Jianhua Zhao

Stability of Software Trustworthiness Measurements Models ..................................................................................................219
  Lewen Zhang, Yong Zhou, Yixiang Chen, Min Zhang, and Juyang Zhang

Fast Abstracts

Vulcloud: Scalable and Hybrid Vulnerability Detection in Cloud Computing ........................................................................225
  Jingzheng Wu, Yanjun Wu, Zhifei Wu, Mutian Yang, and Yongji Wang

Policykeeper: Recommending Proper Security Mechanisms Based on the Severity of Vulnerability Considering User Experience ......................................................................................................................................227
  Mutian Yang, Jingzheng Wu, Yanjun Wu, and Zhifei Wu
   Amiangshu Bosu and Jeffrey C. Carver

A Practical Model for Rating Software Security ..................................................................................................................231
   Haiyun Xu, Jeroen Heijmans, and Joost Visser

Author Index ............................................................................................................................................................................233
