13th IFAC Symposium on Large Scale Complex Systems 2013

Theory and Applications

Shanghai, China
7-10 July 2013

Editor:

Yugeng Xi

# TABLE OF CONTENTS

Localizability and Distributed Localization of Sensor Networks Using Relative Position Measurements ................................................................. 1
Yingfei Diao, Zhiyun Lin, Minyue Fu, Huanshui Zhang

Cluster Synchronization in Networks of Partial-State Coupled Linear Systems Via Pinning Control Technique ................................................................. 7
Jiahu Qin, Changbin Yu

Distributed Leader-Following Swarm of Heterogeneous Multi-Agent Systems ................................................................................................................. 13
Huili Liang, Housheng Su, Xiaofan Wang, Michael Z. Q. Chen

Distributed Output Regulation for Multi-Agent Systems in Output Feedback Form with Parametric-Uncertain Leaders ........................................................................ 19
Xinghu Wang, Yiguang Hong, Haibo Ji

Experiments on Flocking of Multi-Robots in a Bounded Plane ................................................................................................................................. 25
Mingcan Fan, Haitao Zhang, Zhiyou Chen

Decentralized Stabilization of Complex Systems with Delayed Feedback .................................................................................................................. 31
Lubomir Bakov, Manuel De La Sen, Martin Papik, Branislav Rehák

Decentralized Robust Control of Systems Interconnected Over Networks ........................................................................................................... 37
Altug Iftar

Decentralized Parametric Stabilization of Quantized Interconnected Systems with Application to Coupled Inverted Pendulums ........................................................................................................ 43
Ning Chen, Guisheng Zhai, Yuqian Guo, Weihua Gui, Xiaoyu Shen

Decentralized Mixed Delay-Dependent/Delay-Independent Stabilization of Interconnected Time-Delay Systems .................................................................................................................. 51
Sandip Ghosh, Sakti K. Das, Govindadas Ray

Decentralized State Feedback Consensus of Linear Multi-Agent Systems with Input Saturation ................................................................................ 57
Bo Liu, Ning Chen, Guisheng Zhai, Weihua Gui

A Necessary and Sufficient Condition for the Stabilization of Decentralized Time-Delay Systems by Time-Delay Controllers .................................................. 62
H. Ersin Erol, Altug Iftar

Pulse-Based Magnitude-Varying Iterative Learning Control for Large-Scale Systems with Initial State Shifts ............................................................................ 68
Xiaoe Ruan, Jianyong Zhao, Jianling Cui, Bai-Wu Wan

Iterative Learning Based Control and Optimization for Large Scale Systems ........................................................................................................... 74
Jian-Xin Xu, Shiping Yang

Model Based Control and MFAC, Which Is Better in Simulation? .................................................................................................................................. 82
Zhongsheng Hou, Yuanming Zhu

Decentralized Model-Free Adaptive Control for Signalized Intersections Network ........................................................................................................ 88
Yongqiang Li, Zhongsheng Hou, Jiangan Hao

Functional Units in Complex Networks: Beyond Cohesive Modules ................................................................................................................................. 94
Qing-Ju Jiao, Xio Fan Wang, Hong-Bin Shen

Boundary Feedback Stabilization and Control of Star-Shaped Open Canal ................................................................................................. 100
Lihui Cen, Yungeng Xi, Dewei Li

Robust Monitoring of Water Quality in Drinking Water Distribution System ........................................................................................................ 105
Krzysztof Arminski, Mietek Brydys

Hybrid Modelling of Distributed Water Supply Networks ................................................................................................................................. 111
Dongming Liu, Jing Wu, Ning Li, Shaoxuan Li

Two Time-Scale Hierarchical Control of Integrated Quantity and Quality in Drinking Water Distribution Systems ........................................................................ 117
Mietek Brydys, Xinyuan Huang, Yi Lei

Multiprocessor Implementation of Parallel Multiobjective Genetic Algorithm for Optimized Allocation of Chlorination Stations in Drinking Water Distribution System - A New Water Quality Model Approach ........................................................................................................ 123
Grzegorz Ewold, Tomasz Zubowicz, Mietek Brydys

Motion Planning for Multi-Robot Coordination ................................................................................................................................. 129
Ruihui Chai, Jianbo Su

TWGS: A Tree Decomposition Based Indoor Pursuit-Evasion Game for Robotic Networks ...................................................................................... 135
Shichao Mi, Shanying Zhu, Cailian Chen, Xinping Guan
Position/Velocity Consensus in Formation Flying of Multiple Spacecraft ................................................................. 141
Hanlei Wang
Hierarchical Consensus of Multi-Agent Systems Based on Community Decomposition ........................................... 147
Man Tang, Xiaoli Li, Shuangwan Zhao, Yuying Liu
Experimental Verification of a Multi-Robot Distributed Control Algorithm with Containment and
Croup Dispersion Behaviors: The Case of Dynamic Leaders ................................................................................... 153
Hyein Zhang, Zhiyan Zhao, Ziyang Meng, Zongli Lin
Static Output Feedback Controller Synthesis for a Class of Large Scale Systems Application to Power Systems ................................................................. 159
Neila Bedioui, Mekki Ksouri
Neighbourhood Optimization Enhanced Networked MPC with One-Step Delay Communication for
Large-Scale Systems ................................................................................................................................................. 166
Yan Zhang, Chunqiang Bao, Cheng Xu
Impulsive Formation Control Algorithms for Leader-Following Second-Order Nonlinear Multi-Agent Systems ................................................................................................................................................. 172
Wen Qin, Zhongxin Liu, Zengjiang Chen
Observer Based Terminal Sliding Mode Control ........................................................................................................... 178
Dongya Zhao, Shaoyuan Li, Quanmin Zhu, Ge Zhao
The Stabilization of Coordinated Distributed Model Predictive Control ....................................................................... 182
Zheng Yi, Shaoyuan Li
Evaluation and Comparison of Kalman-Filter-Based Distributed State Estimators for Large-Scale Systems ................................................................................................................................................. 188
Mario Giraldo, Felipe Valencia, Jairo Espinosa, Jose David Lopez
Decomposition and Projection Methods for Distributed Robustness Analysis of Interconnected Uncertain Systems ................................................................................................................................................. 194
Sina Khoshfetrat Pakzad, Martin S. Andersen, Anders Hansson, Anders Rantzer
Softly Switched Robustly Feasible Model Predictive Control for Nonlinear Network Systems ........................................... 200
Mietek Brydys, Vu Nam Tran
Global Asymptotical Synchronization of Delayed Complex Dynamical Networks with Switching Topology ................................................................................................................................................. 206
Junguo Lu, Junyao Chen, Weidong Chen
Stability Analysis for Uncertain Multiple-Delay System with Unknown Actuator Parameters ................................... 212
Yiwei Feng, Jazhi Zhang, Jian Luo
Impact of the Network Structure on Transmission Dynamics in Complex Networks ................................................... 218
Chao Yuan, Yi Chai, Penghua Li, Yifei Yang
Robust Non-Negative Matrix Projection Method for Process Monitoring with Incomplete Data ...................................... 224
Xianghao Li, Weidong Qu, Yupu Yang
Simplified Design of H2-Suboptimal Reduced-Order Filters ...................................................................................... 230
Hans Aalto
Large Scale Socio-Economic System Control under Limits of Global Growth .................................................................. 236
Vladimir Tsyganov
Robust Disturbance Observer Based Control for Multi-Variable Systems ................................................................. 242
Zhe Yu, Jianbo Su
Robust Resilient Controllers Synthesis for Uncertain Fractional Order Large-Scale Interconnected System in the Case of 1< α <2 ................................................................................................................................................. 248
Jianyu Lin
Distributed Receding Horizon Control for Dynamically Coupled Large Scale Systems .................................................. 254
Peng Wang, Baocang Ding
Robust Decentralized PI Controller Design Based on Subsystem Pole Placement ..................................................... 260
Ivan Holc, Dunia Rosinova, Vojtech Vesely
A Unified Frequency Domain Method for Designing Robust Decentralized Controllers ....................................... 266
Alena Kozakova, Vojtech Vesely
Frame Synchronization of High-Speed Vision Sensors with Temporally Modulated Illumination in
Highly Dynamic Scenes ................................................................................................................................................. 272
Lei Hou
Research Platform for Monitoring, Control and Security of Critical Infrastructure Systems ..................................... 278
Grzegorz Ewald, Tomasz Zubowicz, Mietek Brydys
Integrated Control in High-Speed Networks Using Constrained Model Predictive Control ....................................... 284
Sekela Margaret Mwandosya, Mietek Brydys
Hybrid Approach to Networked Control System ......................................................................................................... 290
Grzegorz Ewald, Mietek Brydys
Performance Analysis for Remote State Estimation Via Measurement Combination .................................................. 296
Lidong He, Xiaofan Wang
Linear Model Predictive Control for Hammerstein System with Unknown Nonlinearities .............................................. 302
Haokun Wang, Jun Zhao, Zuhua Xu, Zhijiang Shao
Criterion of the Relative Degree Applied to Design of Multivariable Systems .......................................................... 307
Ryszard Geising
Multi-period Planning of Refinery Crude Oil Scheduling Problem with Fluctuating Demands ........................................... 313
Qian Qian Duan, Gen-Ke Yang, Chang-Chun Pan
Robust Fault Detection with Missing Data Via Sparse Decomposition ........................................................................ 321
Nan Li, Yupu Yang
Hybrid-Data-Driven Fuzzy Recognition of Operator Cognitive State in Human-Machine Cooperative Control System ............................................................................................................................... 327
Jianhua Zhang, Joerg Raisch
Collaborative Filtering Recommendation Algorithm Based on Two Stages of Similarity Learning and Its Optimization ......................................................................................................................................................... 335
Jian Shen, Yan Wei, Yupu Yang
Active Learning from Mistakes in Class Imbalance Problems ................................................................................ 341
Chunjiang Fu, Weidong Qu, Yupu Yang
Prediction of Hard Rock TBM Penetration Rate Using Least Square Support Vector Machine ........................................... 347
Yang Ge, Jingcheng Wang, Kang Li
Identifying Changes in Human Operator Mental Workload by Locally Linear Embedding and Support Vector Clustering Approaches ................................................................................................................................. 353
Zhong Yin, Jianhua Zhang
Adaptive Control of Continuous Time-Varying Bioprocesses Using Recursive Kernel Learning Controller with Polynomial Form ......................................................................................................................... 359
Yi Liu, Kun Chen
An Incremental Approach to TS Fuzzy Modeling ........................................................................................................ 365
Rui Ji, Weidong Qu, Yupu Yang
Artificial Neural Network Based Predictive Modeling of Operator Functional State .......................................................... 371
Shaoyang Yang, Jianhua Zhang
An Ontology-Based Emergency Domain Knowledge Model for HTN Planning ................................................................. 377
Dian Liu, Hong-Wei Wang, Kuang-Tu Liu, Jian Wang
On Estimating Spatial Epidemic Parameters of a Simplified Metapopulation Model ............................................................... 383
Jian-Bo Wang, Lang Cao, Xiang Li
An Improved Localization and Navigation Method for Intelligent Wheelchair in Narrow and Crowded Environments ................................................................................................................................. 389
Jingchuan Wang, Weidong Chen, Wenlong Liao
Parameters' Optimization of Resources in a Container Terminal ................................................................................ 395
Hongchang Zhang, Simon Collart-Dutilleul, Khalel Mechkouri
Decentralized Gain-Scheduling Controller Design: Polytopic System Approach ................................................................. 401
Vojtech Vesely, Danica Rosinova, Adrian Ilka
Robust H∞ Control for a Class of Distributed Parameter Switched Systems with Neumann Boundary Conditions ............................................................................................................................................ 407
Xueping Dong, Min Gan
Application of Reinforcement Learning to Switched Control of Hybrid Systems ................................................................. 413
Jiajun Xia, Jianhua Zhang
Hierarchical Distributed Control for Interconnected Systems ........................................................................................... 419
Martin Jilg, Olaf Stursberg
Robust Parameter Estimation and Output Prediction for Reactive Carrier-Load Nonlinear Dynamic Networks ......................................................................................................................................................... 426
Mietek Brdys, Tomasz Zubowiec, Krzysztof Arminski
Support Vector Regression Based 3-D Fuzzy Logic Controller Design for Spatially Distributed Systems ....................... 432
Xianxia Zhang, Ye Jiang, Baili Su
Hierarchical Control of Large Scale Systems: A Zone Control Approach ......................................................................... 438
Alejandro Marquez, Jairo Espinosa, Pablo Deossa, Cesar Augusto Gomez Perez
Gain-scheduling Distributed MPC for Polytopic Uncertain Systems subject to Actuator Saturation ........................................... 444
Langwen Zhang, Jingcheng Wang, Kang Li
A Modified Artificial Immune Algorithm for Fuzzy Resource-Constrained Project Scheduling Problem .............................................................. 450
Hexia Meng, Bing Wang
