2013 International Conference on Intelligent Networking and Collaborative Systems

(INCoS 2013)

Xi’an, China
9-11 September 2013
# INCoS 2013

## Table of Contents

- INCoS 2013: Message from the Conference Chairs .......................................................... xviii
- INCoS 2013: Message from the Workshop Chairs ............................................................... xx
- INCoS 2013: Organizing Committee .................................................................................. xxi
- INCoS 2013: Reviewers ........................................................................................................ xxix
- INCoS 2013: Keynotes .......................................................................................................... xxxi
- INCoS 2013 Sponsors ............................................................................................................ xxxiv
- CNT 2013: Message from the Workshop Chairs ................................................................. xxxvi
- CNT 2013: Organizing Committee ...................................................................................... xxxvii
- CNT 2013: Reviewers ............................................................................................................ xxxviii
- ESN 2013: Message from the Workshop Chairs ................................................................. xxxix
- ESN 2013: Organizing Committee ...................................................................................... xl
- ESN 2013: Reviewers ............................................................................................................ xli
- FINCoS 2013: Message from the Workshop Chairs ............................................................ xlii
- FINCoS 2013: Organizing Committee ................................................................................ xliii
- FINCoS 2013: Reviewers ...................................................................................................... lxiv
- IPA 2013: Message from the Workshop Chairs ................................................................. xlv
- IPA 2013: Organizing Committee ....................................................................................... lxlvi
- IPA 2013: Reviewers ........................................................................................................... lxxvii
- IWCBS 2013: Message from the Workshop Chairs ............................................................ xlviii
- IWCBS 2013: Organizing Committee ................................................................................ xlvix
- IWCBS 2013: Reviewers ..................................................................................................... li
- SCC 2013: Message from the Workshop Chairs ................................................................. li
- SCC 2013: Organizing Committee ................................................................................... lili
- SCC 2013: Reviewers ......................................................................................................... llii
- WIND 2013: Message from the Workshop Chairs ............................................................ liv
- WIND 2013: Organizing Committee ................................................................................... lvi
INCoS 2013—Fifth IEEE International Conference on Intelligent Networking and Collaborative Systems

Session 1: Cloud Computing: Service, Storage, and Virtualization
Highly Flexible and Extensible Storage Scheme for Virtualization Platforms under Cloud Computing .......................................................... 1
  Di Lu, Jianfeng Ma, Yichuan Wang, and Ning Xi
V-MLR: A Multilevel Security Model for Virtualization ......................................................... 9
  Hui Zhu, Yingfang Xue, Yun Zhang, Xiaofeng Chen, Hui Li, and Ximeng Liu
RangeTree: A Feature Selection Algorithm for C4.5 Decision Tree ....................................... 17
  Hui Zhu, Siyu Chen, Lexiang Zhu, Hui Li, and Xiaofeng Chen
An Adaptive Feedback Load Balancing Algorithm in HDFS .......................................................... 23
  Kai Fan, Dayang Zhang, Hui Li, and Yintang Yang

Session 2: Encryption Techniques I
Secure Obfuscation of Conditional Re-encryption with Keyword Search ........................................ 30
  Rong Cheng and Fangguo Zhang
FDR-ABE: Attribute-Based Encryption with Flexible and Direct Revocation ........................................ 38
  Yinghui Zhang, Xiaofeng Chen, Jin Li, Hui Li, and Fenghua Li
Key Policy Attribute-Based Proxy Re-encryption with Matrix Access Structure ...................... 46
  Keying Li, Yinghui Zhang, and Hua Ma
Ciphertext-Policy Weighted Attribute Based Encryption for Fine-Grained Access Control ........... 51
  Ximeng Liu, Jianfeng Ma, Jinbo Xiong, Qi Li, and Jun Ma

Session 3: Machine Learning and Optimization Techniques
Simulation of the Adaptive Multivariate Exploration for Routes Guidance .............................. 58
  Walisa Romsaiyud
Prediction of Multi-class Industrial Data .............................................................................. 64
  Jan Platos and Pavel Kromer
Content Based Spam Text Classification: An Empirical Comparison between English and Chinese ........................................................................ 69
  Liumei Zhang, Jianfeng Ma, and Yichuan Wang
Performance Evaluation of WMN-GA for Wireless Mesh Networks Considering Mobile Mesh Clients ........................................................................... 77
  Tetsuya Oda, Shinji Sakamoto, Evjola Spaho, Makoto Ikeda, Fatos Xhafa, and Leonard Barolli
Game Optimization for Time-Critical Multicast Data Origin Authentication: Trade Off between Security and Efficiency ......................................... 85
  Yichuan Wang, Jianfeng Ma, Di Lu, Liumei Zhang, and Xiang Lu
Session 4: Encryption Techniques II
An Efficient Proof of Retrievability with Public Auditing in Cloud Computing ................................................................. 93
   Jin Li, Xiao Tan, Xiaofeng Chen, and Duncan S. Wong
Secure Cloud File System with Attribute Based Encryption .................................................................................................. 99
   Shuaishuai Zhu, Xiaoyuan Yang, and Xuguang Wu
Security Analysis of Gagne et al.’s Threshold Attribute-Based Signcryption Scheme ................................................................. 103
   Chang-Ji Wang, Jia-Sen Huang, Wen-Long Lin, and Hai-Tao Lin
Public Key Encryption with Ranked Multi-keyword Search .................................................................................................... 109
   Chengyu Hu and Pengtao Liu

Session 5: Clustering Techniques
An Efficient Pretopological Approach for Document Clustering .................................................................................................. 114
   Thanh Van Le, Trong Nghia Truong, Hong Nam Nguyen, and Tran Vu Pham
Towards the Modeling of Atomic and Molecular Clusters Energy by Support Vector Regression .......................................................................................................................... 121
   Aleš Vitek, Martin Stachon, Pavel Krömer, and Václav Snášel
The Contextual Group Recommendation ........................................................................................................................................ 127
   Jing Wang, Hui Li, and Hui Zhao
Latent Dirichlet Allocation Based Semantic Clustering of Heterogeneous Deep Web Sources ................................................................................................................................. 132
   Umara Noor, Ali Daud, and Ayesha Manzoor

Session 6: Security Techniques for Grid, Cloud, and Ubiquitous Computing Systems
Design of a Security Framework on MapReduce ................................................................................................................................. 139
   Zhen Guo, Xudong Zhu, Lijun Guo, and Si Kang
Deceptive Detection and Security Reinforcement in Grid Computing .................................................................................................. 146
   Jianhua Yu, Yue Luo, and Xueli Wang
An Auditing Mechanism for the Security of Service in Grid ........................................................................................................ 153
   Zhusong Liu, Sheng Sun, and Yunfa Li
An Energy-Aware Framework for Reliable and Secure End-to-End Ubiquitous Data Communications ................................................................................................................................. 157
   Arcangelo Castiglione, Alfredo De Santis, Aniello Castiglione, Francesco Palmieri, and Ugo Fiore

Session 7: Intelligent Computing, Data Integrity, and Privacy Techniques
Research on Polymorphism in Digital Text Watermarking ................................................................................................................. 166
   Yuanyuan Cheng, Jin Zhang, Xiaowei Liu, Qingcheng Li, and Zhenlu Chen
Efficient Data Integrity Verification Using Attribute Based Multi-signature Scheme in Wireless Network ........................................... 173
   Ximeng Liu, Tao Zhang, Jianfeng Ma, Hui Zhu, and Feng Cai
Towards Designing Privacy-Preserving Signature-Based IDS as a Service: A Study and Practice ................................................................. 181
Yuxin Meng, Wenjuan Li, Lam-For Kwok, and Yang Xiang

Short-Term Network Traffic Prediction with ACD and Particle Filter ......................................................... 189
Gaoyu Zhang and Duying Huang

Information Entropy Model for Anonymity Measurement ........................................................................... 192
Jun Ye, Yong Ding, and Xin-Guo Li

Session 8: Intelligent Computing and Networking
Randomness and Chaos in Genetic Algorithms and Differential Evolution ............................................. 196
Pavel Krömer, Václav Snášel, and Ivan Zelinka

Wavelet Packet Variance Methods for Multi-period Analysis of Signal ................................................. 202
Ruhua Cai

Numerical Approach for Automatic Theorem Proving in Plane Geometry ............................................. 207
Siwen Guo

RGTE: A Reputation-Based Global Trust Establishment in VANETs ...................................................... 210
Xiaoqing Li, Jicheng Liu, Xuejun Li, and Weiying Sun

GRTR: A Geocasting Routing Based Target Region for VANET ................................................................. 215
Xiaoqing Li, Weiying Sun, Xuejun Li, and Jichen Liu

Session 9: Security and Authentication Techniques
Fully Secure Decentralized Key-Policy Attribute-Based Encryption ...................................................... 220
Qi Li, Jianfeng Ma, Jinbo Xiong, Tao Zhang, and Ximeng Liu

On Design of Nonlinear Operations and Round Functions of Block Ciphers with Resistance to ASCAs ................................................................. 226
Tang Ming, Sun Weijin, Gao Si, Wu Yuan, Peng Hongbo, Qiu Zhenlong, and Wang Xin

Efficient Client-to-Client Password Authenticated Key Exchange Based on RSA ........................................... 233
Ma Chuangui, Wei Fushan, and Gao Fengxiu

A Secure Document Self-Destruction Scheme with Identity Based Encryption ........................................... 239
Jinbo Xiong, Zhiqiang Yao, Jianfeng Ma, Ximeng Liu, and Qi Li

Session 10: Intelligent Networking, Architectures, and Visualization
Network Layout Visualization Based on Sammon’s Projection ................................................................. 244
Martin Radvanský, Miloš Kudélka, Zdeněk Horák, and Václav Snášel

Local Dependency in Networks .................................................................................................................. 250
Sarka Zehnalova, Zdeněk Horák, Miloš Kudélka, and Václav Snášel

Research of Space Robot Autonomous Operation Architecture ............................................................... 255
Hang Yin, Yongming Gao, Guoqiang Zeng, and Chao Wang

A Combined Predictor for Item-Based Collaborative Filtering ................................................................. 261
Zhonghuo Wu, Jun Zheng, Su Wang, and Hongfeng Feng
Session 11: Intelligent Collaborative Systems for Work and Learning
Context and the Virtual Campus: Collaboration in Tertiary Education .................................................................266
   Philip Moore, Andrew Thomas, Fatos Xhafa, and Leonard Barolli
A Social Semantic Repository for Special Needs Education ..........................................................................................273
   Vincenza Benigno, Nicola Capuano, Giuseppina Rita Mangione, and Saverio Salerno
Building Intelligent Emotion Awareness for Improving Collaborative E-Learning .......................................................281
   Thanasis Daradoumis, Marta Arguedas, and Fatos Xhafa

Session 12: Online Collaborative Systems and Virtual Campuses
Providing Information Security to MOOC: Towards Effective Student Authentication ..................................................289
   Jorge Miguel, Santi Caballé, and Josep Prieto
Analysis of P2P Communications in Online Collaborative Teamwork Settings ...........................................................293
   Vladi Kolici, Fatos Xhafa, and Leonard Barolli
University Network-Design Based on Cloud Computing ............................................................................................300
   He Xueni

Session 13: Security and Identity Schemes
On Obfuscating Set-Membership Predicate Functions .................................................................................................304
   Rong Cheng, Feng Diao, and Fangguo Zhang
Fair Computation with Tit-for-Tat Strategy ................................................................................................................309
   Yilei Wang, Qiuliang Xu, and Zhe Liu
Improved Efficient Priority-and-Activity-Based QoS MAC Protocol ............................................................................315
   Xiaoyu Li, Nan Chen, Changhua Zhu, and Changxing Pei

Session 14: Encryption and Authentication Algorithms and Protocols
On Security Model of One-Round Authenticated Key Exchange ..................................................................................319
   Haibo Tian
Private Set Intersection via Public Key Encryption with Multiple Keywords Search ....................................................323
   Zhizhi Shao, Bo Yang, and Yong Yu
A New Privacy-Preserving Broadcast Encryption Scheme from DPVS .........................................................................329
   Hao Wang, Zhihua Zheng, and Yilei Wang
IDPKC-to-TPKC Construction of Multi-receiver Signcryption ....................................................................................335
   Xiaotong Fu, Xiaowei Li, and Wen Liu

Session 15: Next-Generation Network Protocols and Components
Efficient Algorithm for Detecting Firewall Rule Conflict ..............................................................................................340
   Xu Yan, Wei Zhaoxia, and Tang Qingrong
The Research on Algorithm for Congestion Control Based on Video Transmission .................................................344
   Hao Yujie and Fang Wei
Impact of Channel Estimation Error on Time Division Broadcast Protocol in Bidirectional Relaying Systems .......................................................................................................................................................................................... 348
  Mingying Wu, Jing Li, Jianhua Ge, Chensi Zhang, and Florin Pop

Guaranteed QoS Resource Scheduling Scheme Based on Improved Electromagnetism-Like Mechanism Algorithm in Cloud Environment ............................................................................................................................................... 353
  Shang Yun

Session 16: Privacy and Signatures

Privacy-Preserving Cooperative Downloading for Value-Added Services in VANETs .......................................................... 358
  Wujun Zhang, Shunrong Jiang, Xiaoyan Zhu, and Yumin Wang

Revocable Identity-Based Signature without Pairing ........................................ 363
  Yinxia Sun, Futai Zhang, Limin Shen, and Robert Deng

Fixing the Sender-Equivocable Encryption Scheme in Eurocrypt 2010 .................. 366
  Zhengan Huang, Shengli Liu, Baodong Qin, and Kefei Chen

Session 17: Intelligent Techniques

Application of Evolutionary Neural Network in Infrared Nondestructive Test .......................................................... 373
  Zi-Jun Wang, Jing-Min Dai, and Zhao-Xuan Zhu

Cloud Model-Based Multi-objective Estimation of Distribution Algorithm with Preference Order Ranking .................................................. 376
  Ying Gao and Waixi Liu

BDI Goal Recognition for Agent Program Learning ................................................ 380
  Hongyun Xu, Youqun Shi, and Qiying Cao

Session 18: Signature Models and Schemes

A New Construction of Proxy Signature Using Chameleon Hash Function .......................................................... 388
  Yannan Li, Qi Xia, Jianbing Ni, and Yong Yu

General Certificateless Strong Designated Verifier Signature Schemes .......................................................... 392
  Haibo Tian

Efficient Implementation of Tate Pairing with Montgomery Ladder Method .......................................................... 398
  Yulong Tian, Dawu Gu, and Haihua Gu

Blind Signature Scheme Based on Quartic Residues .......................................................... 403
  Jianhua Yu, Kun Wang, Pingzhi Yuan, and Xueli Wang

Session 19: Software Engineering, Ontologies, and Semantics

A Similarity Measure for the Description Logic EL with Unfoldable Terminologies .......................................................... 408
  Boontawee Suntisrivaraporn

ProNet Framework: Network Management Using Semantics and Collaboration .......................................................... 414
  Luciana Pereira Oliveira and Djamel F. Hadj Sadok
Towards Software Infrastructure for the Systematic Virtualization of Collaborative Learning Sessions ................................................................. 422

David Gañán, Santi Caballé, and Jordi Conesa

Session 20: Digital Signatures

Yet Another Way to Construct Digital Signature in the Standard Model .................................................. 430

Jindan Zhang and Xu An Wang

New Construction of PVPKE Scheme Based on Signed Quadratic Residues ........................................ 434

Jindan Zhang and Xu An Wang

Efficient Predicate Encryption Supporting Construction of Fine-Grained Searchable Encryption .................. 438

Minqing Zhang, Xu An Wang, Xiaoyuan Yang, and Weiyi Cai

Constructing Connected Dominating Set Based on Crossed Cube in WSN ......................................... 443

Jing Zhang, Li Xu, Shu-Ming Zhou, and Wei Wu

Session 21: Mobile and Sensor Networks

A Delay Sensitive Time Slots Scheduling in Vehicular Sensor Networks ............................................. 448

Chen Chen, Xiaolu Wei, Yanan Jin, and Shengjin Ge

Methods for Determining the Restoration Order of Base Nodes in the Virtual Segment Network .................. 456

Hiroshi Tsuji, Akihiro Fujihara, and Hiroyoshi Miwa

Efficient Data Gathering in Intermittent Connected Mobile Sensor Networks ........................................ 462

Yongping Xiong, Shizhong Wu, Tao Zhang, Yubo Deng, and Shiwu Chen

Session 22: Security and Cryptography

A Secure and Efficient E-Cheque Protocol from Chameleon Hash Function ...................................... 470

Ying Sun, Jiwen Chai, Huihui Liang, Jianbing Ni, and Yong Yu

Research on the Degeneration Problem of Key Sequence Based on Chaos ........................................ 476

Jing-Jing Wang, Ping Wei, and Jia-Yong Chen

Secure Multi-party Confidential Protocol of Matrix Factorization ...................................................... 480

Haiyan Xiao and Xiaoyuan Yang

ID-Based Signcryption with Restrictive Unsigncryption ............................................................... 485

Fei Tang, Changlu Lin, and Hongda Li

Session 23: Security Resilience and Signatures

Ternary Method in Elliptic Curve Scalar Multiplication ............................................................... 490

Ning Zhang and Xiaotong Fu

Leakage-Resilient Proxy Signatures ........................................................................................................ 495

Fei Tang, Hongda Li, Qihua Niu, and Bei Liang

A Server-Aided Aggregate Verification Signature Scheme from Bilinear Pairing ................................ 503

Huai Wu, Chunxiang Xu, and Jiang Deng
Elliptic Curve Scalar Multiplication Based on Fibonacci Number ................................................................. 507
Ning Zhang and Shichong Tan

**Session 24: Trust and Sharing**
Proactive Secret Sharing without a Trusted Party .................................................................................................. 511
Xiuqun Wang, Changlu Lin, and Yong Li

Fault and Intrusion Tolerance of Complex Networks: A Controllability View ................................................. 516
Yuehua Zhou, Yong Zeng, Zhihong Liu, Nan Li, Jianfeng Ma, and Lihua Dong

Fully Secure Attribute-Based Encryption with Non-monotonic Access Structures .......................................... 521
Xiaoyuan Yang, Weidon Du, Xuan Wang, and Liqiang Wang

Dynamic Trust Threshold Value Based on Market Theory in Cognitive Radio Networks ............................... 528
Qingqi Pei, Conglin Wang, and Zi Li

**Session 25: Encryption, Information Storage, and Retrieval**
RLWE-Based Homomorphic Encryption and Private Information Retrieval ...................................................... 535
Wei Zhang, Shuguang Liu, and Yang Xiaoyuan

A Secure Cloud Storage System from Threshold Encryption ............................................................................. 541
Chuan Yao, Li Xu, and Xinyi Huang

Outsourcing of Verifiable Composite Modular Exponentiations ....................................................................... 546
Jie Liu, Bo Yang, and Zhiguo Du

A Ciphertext-Policy Attribute-Based Proxy Re-encryption with Chosen-Ciphertext Security .......................... 552
Kaitai Liang, Liming Fang, Willy Susilo, and Duncan S. Wong

**Session 26: Signature Models and Schemes**
Anonymous Single Sign-On Schemes Transformed from Group Signatures ..................................................... 560
Jingquan Wang, Guilin Wang, and Willy Susilo

Lattice-Based Multi-party Concurrent Signatures Scheme ............................................................................... 568
Shangping Wang, Lihua Liu, Juanjuan Chen, Jin Sun, Xinwen Zhang, and Yaling Zhang

Attribute-Based Signatures with Efficient Revocation ...................................................................................... 573
Yanling Lian, Li Xu, and Xinyi Huang

Post-quantum Strongly Unforgeable Identity-Based Signature Scheme from Lattices without Random Oracles ................................................................................................................................. 578
Zhenhua Liu, Xiangsong Zhang, and Tsuyoshi Takagi
FINCoS 2013—Second International Workshop on Frontiers in Intelligent Networking and Collaborative Systems

Session 1: Security, Encryption, and Authentication Services
Public Verifiable Key Encapsulation Mechanism under Factoring .................................................................586
Zhen Liu and Xiao Yuan Yang
Provably-Secure Certificateless Proxy Re-signature Scheme ...............................................................591
Haiyan Xiao and Mingqing Zhang
Research on Cloud Computing Based Data Processing for Financial Terminal Equipment .................................................................595
Zhou Zhizhao
Intelligent Network Course Platform Based on Agent ........................................................................599
Zhong Yangjing and Li Xiangyang

Session 2: Intelligent Data Processing, Optimization, and Analysis
The Permanent Magnet Synchronous Linear Motor Position Control Based on Fuzzy Neural Network .................................................................602
Li Cailin and Wang Dongmei
Low-Complexity Resource Allocation in Rate-Constrained OFDMA Downlink Systems ........................................607
Xiao-Mao Chen and Ou-Yang Shan
Design of Array Signal Processing System Based on TMS320C6678 .........................................................611
Li Xiangyang
An Approach for Regression Test Case Selection Using Object Dependency Graph ........................................617
Adipat Larprattanakul and Taratip Suwannasart

CNT 2013—International Workshop on Communications and Network Theory

Session 1: Communication Theory and Tools
Optimal Design of the Joint Network LDPC Codes for Half-Duplex Cooperative Multi-access Relay Channel .................................................................622
Jingyi Wang, Shuling Che, Ying Li, and Junlong Wang
Distributed SR-LDPC Codes over Multiple-Access Relay Channel .................................................................626
Rong Sun and Jingwei Liu
Research on Optimization for Cooperative Spectrum Sensing Based on Double Threshold Energy Detection .................................................................629
Huiqin Liu, Shubin Wang, Fei Li, and Shaowen Zhan
An Ultrahigh Speed AES Processor Method Based on FPGA .................................................................633
Xin Cai, Rong Sun, and Jingwei Liu
An Efficient and Lightweight Certificateless Authentication Protocol for Wireless Body Area Networks .................................................................637
Lu Zhang, Jingwei Liu, and Rong Sun
Session 2: Cipher Theory and Analysis

Linear Complexity of Binary Generalized Cyclotomic Sequences of Order 6 over $\mathbb{Z}_{pq}$ ........................................640

Tongjiang Yan and Yanyan Liu

A New Polyphase Generalized Sequence of Length $pq$ and Its Linear Complexity ...............................................645

Tongjiang Yan and Pan Xu

$(t, n)$ Threshold Digital Signature Scheme with Traceable Signers against Conspiracy Attacks .........................................................649

Lin-Sen Zhao and Jing-Mei Liu

Lagrange Interpolation Attack against 6 Rounds of Rijndael-128 ........................................................................652

Jingmei Liu, Shaopeng Chen, and Linsen Zhao

ESN 2013—First International Workshop on Evolution of Social Networks

Session 1: Networks

Empirical Analysis and Evolution Modeling of Network Topological Structure in Microblog .......................................................656

Weiguo Yuan and Yun Liu

Visualization of Large Graphs Using GPU Computing ........................................................................................................662

Tomáš Ježowicz, Miloš Kudělka, Jan Platoš, and Václav Snášel

Evolution of Scale-Freeness in a Co-authorship Network ..........................................................................................668

Pavel Krömer, Miloš Kudělka, Zdeněk Horák, and Václav Snášel

Session 2: Theoretical Background

A Color Digital Watermarking in Nonsampled Contourlet Domain Using Generic Algorithm .........................................................673

Peng Luo, Ping Wei, and Yi-Qun Liu

Toward Construction of PVPKE in the Standard Model Based on Factoring Assumption ..................................................677

Xu An Wang, Jinting Nie, Yi Ding, and Junru Hu

An Improved Secure Unidirectional Proxy Re-encryption Scheme ................................................................................681

Ping Wei and Shuaishuai Zhu

IPA 2013—International Workshop on Image Processing and Applications

Session 1: Image Processing and Applications

Texture Image Denoising Algorithm Based on Structure Tensor and Total Variation .........................................................685

Caixia Li, Chanjuan Liu, and Yilei Wang

A Learning-Based Framework for Image Segmentation Evaluation ..........................................................................................691

Jian Lin, Bo Peng, Tianrui Li, and Qin Chen

Face Recognition Based on Shearlets Transform and Principle Component Analysis .........................................................697

Zhiyong Zeng and Jianqiang Hu
Moving Object Tracking and 3D Measurement Using Two PTZ Cameras .................................................................702
Guang Zheng, Shunichiro Oe, and Zengguo Sun

Session 2: Security Processing and Machine Learning Applications
A Hybrid Encryption Scheme for Scalable Video Coding Based on H.264 .................................................................708
Jianlong Zhang and Xinbo Gao
A Real-Time Template Generation Algorithm to Identify RMB Crest Number .............................................................712
Gaoyu Zhang and Yingying Wang
Tensor Missing Value Recovery with Tucker Thresholding Method .............................................................................716
Junxiu Zhou, Shigang Liu, Guoyong Qiu, Fengmin Zhang, and Jiancheng Sun
A Spatially Varying Mean and Variance Active Contour Model ...............................................................................721
Yali Peng, Shigang Liu, Hong Fan, Jiamei Gao, and Jiancheng Sun

Session 3: Intelligent Processing and Applications
Pedestrian Classification Based on Improved Support Vector Machines .................................................................726
Hongmin Xue and Zhijing Liu
Fast 3D Ear Recognition Based on Local Surface Matching and ICP Registration ....................................................731
Heng Liu
Image Decomposition Using Bregman-GTV and Meyer’s G-Norm ........................................................................736
Lu Chengwu and Zhou Daoqing
Facial Emotion Recognition Using PHOG and a Hierarchical Expression Model .....................................................741
Zhao Zhong, Gang Shen, and Wenhu Chen
Design and Implementation of Android Contacts Synchronization System Based on the SyncML Protocol .................747
Hao Yujie and Yan Chao

IWCBFS 2013—International Workshop for Collaborative e-Business Systems

Session 1: E-Business, E-Commerce, and Supply Chains
Creation of Customer Evaluation Model in the Catering Industry Supply Chain Ecosystem ........................................751
Kai Wei, Juanqiong Gou, Rui Chai, and Wei Dai
A Collective Knowledge System for Business Partner Co-operation ........................................................................757
Matteo Gaeta, Francesco Orciuoli, Pierluigi Ritrovato, Giuseppe D’Aniello, and Alfonso De Vivo
Framework for Real-Time Process Modeling of Supply Chains .............................................................................763
Paul Moynihan and Wei Dai
On Three-Dimensional Digital Earth Application Development Framework and Its Applications ................................769
Zenghui Zhao, Jingnong Weng, Huaizhou Wang, Junyi Zhao, Jingui Li, and Anda Li
An Improved Database Inspection System for E-commerce Companies Based on Web
Data Mining ................................................................................................................................................... 775
   Fuzhi Chu, Runtong Zhang, Rongqian Ni, and Wei Dai

SCC 2013—International Workshop on Secure Cloud Computing

Session 1: Secure Cloud Computing
Finding Key Leakage in Hierarchical Distribution of Encrypted Data ................................................................. 780
   Hua Deng, Bo Qin, Ruiying Du, Huaguo Zhang, Lina Wang, Jianwei Liu, and Jian Mao
An Effective Fuzzy Keyword Search Scheme in Cloud Computing ........................................................................... 786
   He Tuo and Ma Wenping
BaitAlarm: Detecting Phishing Sites Using Similarity in Fundamental Visual Features ........................................... 790
   Jian Mao, Pei Li, Kun Li, Tao Wei, and Zhenkai Liang
Attribute-Based Signcryption Scheme with Non-monotonic Access Structure ......................................................... 796
   Yiliang Han, Wanyi Lu, and Xiaoyuan Yang

Session 2: Secure Data Storage and Networking
Secure Distributed Key Generation on Vector Space Access Structures in Bilinear Groups ........................................ 803
   Jie Zhang and Futai Zhang
An Improved Identity-Based Batch Verification Scheme for VANETs ........................................................................ 809
   Bao Liu and Lei Zhang
A Multi-user Searchable Symmetric Encryption Scheme for Cloud Storage System .................................................... 815
   Zhang Yaling, Jia Zhipeng, and Wang Shangping
A Hybrid System for Authentication Service ........................................................................................................... 821
   Yongqiang Zhang, Qiang Liu, and Haibo Tian

WIND 2013—Fifth International Workshop on Information Network Design

Session 1: Keynote Talk
Networking Technology Trend in Japan, Toward Earth-Friendly Infrastructure ..................................................... 827
   Akira Arutaki

Session 2: Information Network Design
Network Design Problem by Link Protection to Keep Small Increase of Path Length during Link Failures ...................... 829
   Kohei Nishida and Hiroyoshi Miwa
Delivering a File by Multipath-Multicast on OpenFlow Networks ............................................................................. 835
   Akira Nagata, Yoshiaki Tsukiji, and Masato Tsuru
Multi-Jain Fairness Index of Per-Entity Allocation Features for Fair and Efficient Allocation of Network Resources ............................................................................. 841
   Mario Köppen, Kei Ohnishi, and Masato Tsuru
