18th Australasian Weeds Conference 2012

Developing Solutions to Evolving Weed Problems

Melbourne, Victoria, Australia
8-11 October 2012

Editors:

Valerie Eldershaw

ISBN: 978-1-62993-288-0
Some format issues inherent in the e-media version may also appear in this print version.
Contents

MONDAY 8TH OCTOBER

SOURCES AND SPREAD OF NEW WEEDS

In the footsteps of cows. Using technology to predict new weed incursions
Scott Charlton, Robyn Henderson and Michael Michelmore

Predicting the dispersal of hawkweeds \textit{(Hieracium aurantiacum} and \textit{H. praealtum}) in the Australian Alps
Roger Cousens, Felix Heydel, Katherine Giljohann, Oliver Tackenberg, Mohsen Mesgaran and Nicholas Williams

Weeds of tropical Australia: how do they get here?
Barbara M. Waterhouse and Andrew A. Mitchell

Parthenium incident in the Pilbara, Western Australia: how is this ‘a good news story’?
Anna-Marie Penna and Martin MacFarlane

\textit{Mikania micrantha} H.B.K. – a potential and economical threat to global biodiversity with special emphasis on Indian context
Achyut Kumar Banerjee and Anjana Dewanji

WEED MANAGEMENT IN AQUATIC SYSTEMS

Ecology of the submersed aquatic weed \textit{Cabomba caroliniana} in Australia
Tobias O. Bickel

Rotorua lakes weed cordons – a freshwater biosecurity tool
Hamish Lass

Herbicide control of submerged bog moss \textit{(Mayaca fluviatilis} Aubl.)
Barbara A. Madigan and Joseph S. Vitelli

Surveying salvinia \textit{(Salvinia molesta)} and para grass \textit{(Urochloa mutica)} on a floodplain system in Northern Australia
Daniel McIntyre

Water hyacinth \textit{(Eichhornia crassipes} (Mart.) Solms) seed longevity and the implications for management
Paul R. Sullivan and Rod Wood

Potential new herbicides for submerged aquatic weeds in Victoria
Tony M. Dugdale, Trevor D. Hunt, Daniel Clements and Kym Butler
WEED MANAGEMENT FOR BIODIVERSITY CONSERVATION

Manipulating shrub cover on Victorian fuelbreaks to reduce weed invasion
Robin J Adair and Kym L. Butler

Spatial prioritisation for management of gamba grass (Andropogon gayanus) invasions: accounting for social, economic and environmental values
Vanessa M. Adams and Samantha Setterfield

Chasing the lion’s tail. The value of program review: a case study from the management of Leonotis nepetifolia (L.) R.Br. in Rinyirru (Lakefield) National Park
John R. Clarkson, A. (Tony) C. Grice and Colin Dollery

Control of wards weed (Carrichtera annua) on rare species translocation sites at Westonia in the eastern wheatbelt of Western Australia
Bob Dixon

Managing native grasslands to minimise invasion by Chilean needle grass (Nassella neesiana)
Ian G. Faithfull, Colin Hocking and David A. McLaren

Management of orange hawkweed in New South Wales
Jo Caldwell, Mark A. Hamilton, Peter J. Turner, Stephen B. Johnson and Genevieve Wright

Thomson Aberfeldy Demonstration Site – a strategic weed project. Implementing Victoria’s biosecurity approach to pest management on public land
Penny Gillespie, Rebecca James and Sally Lambourne

Growth and control of Chilean flame creeper (Tropaeolum speciosum)
Trevor K. James, Clayson Howell and Anis Rahman

Management recommendations for invasive Scotch broom (Cytisus scoparius L.) in Australia and USA depend on invasion stage, demographic targets and management cost
Natalie Z. Kerr, Peter W.J. Baxter and Yvonne M. Buckley

Identification of the invasive weeds, camel melon, prickly paddy melon and colocynth in Australia – a morphological and molecular approach
Razia S. Shaik, David Gopurenko, Geoffrey E. Burrows, Nigel A.R. Urwin, Brendan J. Lepschi, Shane M. Hildebrand and Leslie A. Weston

Invasive weed control in grassy ecosystems
Steve Taylor

Wildfire stimulates boneseed germination 8.5 years after adult plants cleared
Keith Briden and Kate G. McAlpine

White weeping broom (Retama raetam) control on Yorke Peninsula
Ken Rudd
A publication that summarises the 56 weeds-related research projects undertaken as part of the National Weeds and Productivity Research Program.

Available now in hard copy or electronic format at www.rirdc.gov.au
EVALUATION OF WEED MANAGEMENT OUTCOMES

An annual cycle of review and planning for weed management by a mining company in Northern Australia 84

Cherie Gellert

Spread, specificity and initial impact of the white-smut fungus Entyloma ageratinae on mistflower in Australia 88

Louise Morin, Melissa Piper, Andrew White and Shon Schooler

Managing a Weed of National Significance for the conservation of a Critically Endangered Species: challenges and trade-offs 91

Paul O. Downey, Justin Hurley Ley, Nicole Sykes, and William B. Sea

Eradication: lessons learnt from 17 years of the National Siam Weed Eradication Program 92

Mick Jeffery

NEW TECHNOLOGY

Gorse control using ultra low volumes of herbicides and unmanned aerial vehicles 96

John Moore

The Weed Seed Wizard: have we got a solution for you! 99

Sally C. Peltzer, Alex Douglas, Art Diggle, George Wyatt and Michael Renton

The design and the development of a hyperspectral unmanned aircraft mapping system for the detection of invasive plants 103

Remy L. Dehaan, Leslie A. Weston and Rod Rumbachs

A new method for assessing herbicide damage in weeds 108

William B. Sea, Nicole Sykes and Paul O. Downey

Development of a custom weed mapping application for annual weed surveys by a mining company in the Northern Territory of Australia 112

Daniel McIntyre

WEED MANAGEMENT FOR BIODIVERSITY CONSERVATION

Let’s get strategic: an invasive plant prioritisation process for DEC WA 116

Kellie Passeretto and Nisha Powell

Implementation of strategic weed management for biodiversity conservation in protected areas of New South Wales 120

Peter J. Turner, Leonie K. Whiffen, Ruth Armstrong and Mark A. Hamilton

Metsulfuron-methyl impact on native vegetation in the Daintree lowlands, far-north Queensland, Australia 122

Hugh J. Spencer

Rotoroa Island – Integrated weed management for biodiversity outcomes 127

Jo Ritchie
DECLINES AND ROTS

A preliminary investigation of prickly acacia dieback (*Acacia nilotica* ssp. *indica*)
Ahsanul Haque, Victor Galea, Ken Goulter, Andrew Bissett and Rieks D. van Klinken

Bulb rot in live *Allium triquetrum* by *Pectobacterium carotovorum* subsp. *carotovorum*
Parsa Tehranchian, Robin Adair and Ann C. Lawrie

Effect of season on the efficacy of artificial inoculation of *Nigrospora oryzae* in *Sporobolus fertilis*
David Officer, Sethu Ramasamy and Ann C. Lawrie

Get more beef from your pastures
The practical tools you need to build a more profitable enterprise

The producer's manual can be downloaded by individual modules at www.mla.com.au/morebeef

Making More From Sheep
Is a best management practice program to help sheep producers do what they do, even better

The Making More From Sheep manual can be downloaded in full or by individual modules at www.makingmorefromsheep.com.au/module-index

www.mla.com.au
The gateway to all your on-farm information needs
For all the latest news, analysis and information on the red meat industry in Australia and around the world, www.mla.com.au is the place to find it.
Blackberry decline: a major disease of *Rubus anglocandicans* in south-west Australia

*Sonia Aghighi, Lee Fontanini, Paul B. Yeoh, Giles E. St.J. Hardy, Treena I. Burgess and John K. Scott*

Investigations into natural serrated tussock (*Nassella trichotoma*) die-back events observed in Tasmania and NSW

*David McLaren and Julio Bonilla*

---

**TUESDAY 9TH OCTOBER**

**KEYNOTE**

Weed management to optimise seabird habitat in the Phillip Island Nature Park

*Jarvis Weston*

---

**WEED MANAGEMENT IN GRAZING SYSTEMS**

Alternative herbicides for flupropanate resistant serrated tussock

*Charles Grech, Tamara Threlfall, Masha Fridman and David McLaren*

Effect of 10 years of organic dairy farming on weed populations

*Kerry C. Harrington, Mark A. Osborne and Peter D. Kemp*

Hymenachne headaches: addressing management issues associated with a conflict species

*Craig C. Magnussen*

Putting fireweed on the front burner: improving management and understanding impact

*Brian M. Sindel, Michael J. Coleman and Ian J. Reeve*

Improving regional adoption of weed control: a case study

*Peter J. Berney, Brian M. Sindel, Michael J. Coleman, Graham R. Marshall, Ian J. Reeve and Paul E. Kristiansen*

Allelopathic effect of canola on annual ryegrass

*M. Asaduzzaman, Min An, James E. Pratley, David J. Luckett and Deirdre Lemerle*

Assessment of flupropanate tank mixtures: compatibility with other herbicides

*Charles Grech, Tamara Threlfall and David McLaren*

Allelopathic potential of *Amaranthus viridis* L. against annual ryegrass

*Shamima Sultana and M. Asaduzzaman*

**GLYPHOSATE RESISTANCE SYMPOSIUM**

Management of glyphosate resistant weeds in non-agricultural areas

*Jenna Malone, Anthony Cook, Hanwen Wu, Abul Hashem and Christopher Preston*
Biosecurity

What is biosecurity?
Biosecurity is the protection of the economy, the environment, social amenity or human health from negative impacts associated with the entry, establishment or spread of animal or plant pests and disease, or invasive plant and animal species.

Why is biosecurity important?
Biosecurity is fundamental to the health, well-being and prosperity of all Victorians. Victoria has a strong record of identifying and managing biosecurity risks for the agricultural production sector but it is time to look to the future. Our natural environment and primary industries face new and emerging biosecurity threats which bring new challenges and require new solutions.

DPI develops policy, standards, delivery systems and services that reduce the threat of invasive plants and animals to agriculture and the natural environment, protect animals and plants from pests and diseases, enhance food safety, ensure minimal and effective chemical use, protect the welfare of animals and preserve and expand market access for Victoria’s primary industries.

Our purpose is to:
- Minimise the impact of pests, diseases, invasive plants and animals, chemical use and residues, and animal welfare incidents upon market access, and the environment and production systems, while ensuring food safety and public health.
- Maximise the adoption of best practice in animal welfare, chemical use and residues, and biosecurity (control of pests and diseases and invasive plants and animals either naturally occurring or deliberately introduced).

As a leading government agency, DPI provides high level scientific, policy and operational expertise within Victoria, at the national level and at times in the global market.

For more information, visit www.dpi.vic.gov.au or call 136 186.
Aligning policy and practice – managing WoNS in the South Australian context  
Shauna Potter, Greg Patrick and Justine Drew

Environmental impact on biocontrol agents and secondary chemistry of Paterson’s curse  
(Echium plantagineum)  
Paul A. Weston, Leslie A. Weston and Shane Hildebrand

Buffel grass in South Australia – development of pest plant policy  
Tim Reynolds

WEED MANAGEMENT IN GRAZING SYSTEMS

Management of flaxleaf fleabane (Conyza bonariensis) in lucerne pastures  
H. Wu and E. Koetz

Control options for annual grass weeds in New Zealand high country pastures  
Katherine Tozer, Catherine Cameron and Grant Edwards

Silage for managing weed seeds  
Rex Stanton, John Piltz, Craig Rodham and Hanwen Wu

Finding needles in a haystack: an investigation of a non-destructive method to detect the seeds of Chilean needle grass (Nassella neesiana (Trin. & Rupr.) Barkworth) in round hay bales  
Sandra Weller, Singarayer Florentine, Graeme Ambrose, Charles Grech and David McLaren

WEED MANAGEMENT IN CROPPING SYSTEMS

Herbicide cross resistance in Bromus diandrus and B. rigidus populations across south-eastern Australia  
Peter Boutsalis, Christopher Preston and Gurjeet Gill

The risks of resistance evolving to glyphosate in Australian non-agricultural weed management systems  
Andrew Storrie, John Cameron and Mark Congreve

Modelling the effectiveness of glyphosate resistance prevention strategies in Australian sub-tropical farming systems  
David Thornby, Jeff Werth and Steve Walker

Glyphosate resistance in barnyard grass (Echinochloa colona)  
Hoan Nguyen Thai, Jenna Malone, Peter Boutsalis and Christopher Preston

Weed species present in cereal crops in southern New South Wales  
John C. Broster, Eric A. Koetz and Hanwen Wu

Weed detecting technology: an excellent opportunity for advanced glyphosate resistance management  
Tony Cook

Strategic tillage reduces emergence of key sub-tropical weeds  
Andrew R. McLean, Michael J. Widderick and Steven R. Walker
LOCAL GOVERNMENT’S ROLE IN WEED MANAGEMENT

Yarra Ranges Council: creating partnerships that really work
Gaye Gadsden

Local government is a vital cog in the weed management engine: lessons learnt in New South Wales
Stephen B. Johnson, Heather Apps, Paula Bosse, Doug Campbell, Ann Herbert, Geoff Hudson, Rosanna Luca, Reece Luxton, Megan Power, Terry Schmitzer and Wendy Thorsborne

Occurrence of glyphosate resistant annual ryegrass (Lolium rigidum) on fence lines of South Australian cropping fields
Patricia Adu-Yeboah, Christopher Preston, Peter Boutsalis and Gurjeet Gill

ERADICATION THEORY AND PRACTICE

Rapid response to the discovery of olive hymenachne (Hymenachne amplexicaulis (Rudge) Nees) on Rinyirru (Lakefield) National Park
John R. Clarkson, A. (Tony) C. Grice and Lisa A. Still

Overcoming weed eradication challenges in the Indian Ocean Territories
Jonathan Dodd and Andrew W. Reeves

Designing a detection experiment: tricks and trade-offs
Cindy E. Hauser, Joslin L. Moore, Katherine M. Giljohann, Georgia E. Garrard and Michael A. McCarthy

---

Crusader ™
HERBICIDE

- Registered for use in Wheat, Triticale and Cereal Rye
- Phalaris, Wild oats, Ryegrass, Brome grass
- Wild radish, Capeweed, Volunteer legumes
- Short plantbacks
- Enhanced compatibility

For more information contact your local Dow AgroSciences representative on 1800 700 096 or visit www.cropsolutions.com.au
Does the tolerance of weeds to herbicide change with elevated levels of CO2?
Paul O. Downey, Tanya I. Lenz, William B. Sea, William Higgisson, Guillaume Lavier, P. Waryszak and Michelle R. Lieshman

WEED MANAGEMENT IN CROPPING SYSTEMS

Modelling the effects of ecology, management and genetics on the evolution of herbicide resistance with PERTH
Michael Renton, Ken Flower, Roberto Busi, David Thornby, Michael Airey, Sudheesh Manalil, Art Diggle and Stephen Powles

Non-chemical options for managing the seed bank of glyphosate resistant weeds
Michael J. Widderick, Andrew R. McLean and Steven R. Walker

Effects of stress on efficacy of pinoxaden on oats
Trevor Klein, Garth Wickson and Paul Chatfield

COMMUNITY INVOLVEMENT

Landscape sustainability through blackberry management: emerging roles for the Community-Led Approach and the Victorian Blackberry Taskforce?
Lyn Coulston, Michael Reid and Brian Furze

Using a local management zoning framework to foster a management continuum. Is the ‘big four’ a defeatist mindset and are there alternatives at a local and regional level?
Travis Sydes

Why don’t they manage their weeds? ‘Behaviour Change’ research
Karen Alexander, Julie Thompson, Marianne Sawyer and Rosalie Cooper

A Community Led Approach for the management of widespread pests in Victoria
Shane Herbertson

THURSDAY 11TH OCTOBER

KEYNOTE

Messages and metaphors: is it time to end the ‘war on weeds’?
John Dwyer

Food security for a 9 billion population: more R&D for weed control will be critical
Rachel E.C. McFadyen

CAWS Oration: Sustained control of plant invaders requires our sustained public outreach
Richard N. Mack
WEED R&D ISSUES

Further development of the National Weed Risk Management Protocol
Bruce Auld, Stephen Johnson, Nigel Ainsworth, Sarah Brunel, Steve Csurhes, Paul Downey, Keith Ferdinands, Martin Hannan-Jones, Bertie Henneke, Paul Keese, Darren Kriticos, David Low, Christine Munday, F. Dane Panetta, Andrea Robold, Samantha Setterfield, Jackie Steele, Karen Stewart and John Virtue

Containment: the state of play
A.C. Grice, J.R. Clarkson, M.H. Friedel, H.T. Murphy, C.S. Fletcher and D.A. Westcott

Genetic risk assessment to complement weed risk assessment in the selection and management of perennial species for agricultural systems in southern Australia
Christine Munday, Karen Bettink, Margaret Byrne and Lynley Stone

The impact of emergence time on silverleaf nightshade (Solanum elaeagnifolium) development and growth
Xiaocheng Zhu, Hanwen Wu, Rex Stanton, Harsh Raman, Deirdre Lemerle and Geoffrey Burrows

CLASSICAL BIOLOGICAL CONTROL

Effects of pine oil, sugar and covers on germination of serrated tussock (Nassella trichotoma) and kangaroo grass (Themeda triandra) in a Pot Trial
David A. McLaren, Masha Fridman and Julio Bonilla

The viability, pathogenicity and potential impact of the lantana rust Prospodium tuberculatum
Natasha Riding, Elizabeth L. Snow and Michael D. Day

The release of Plectonycha correntina, a leaf feeding beetle for the biological control of Madeira vine
Elizabeth L. Snow, William A. Palmer and K.A.D. Wilmot Senaratne

Variation in Septocyta ruborum and its potential for biological control of European blackberry
Robin J. Adair, Janita Baguant and Ann C. Lawrie

Biological control agents are observed on Mimosa pigra six and 12 years after their release in the Northern Territory, Australia
Natasha Burrows and Bertrand Lukitsch

The establishment of the clearwing moth for horehound control in South Australia
Susan Ivory

Observations on the distribution of the spear thistle gall fly Urophora stylata and thistle receptacle weevil Rhinocyllus conicus in southern Australia
Tom Morley

Attempts to establish the boneseed leaf buckle mite in Australia for the biological control of boneseed
Tom Morley, John Ireson and Susan Ivory

Preliminary investigations of the Mimosa pigra dieback phenomenon
Aniline Sacdalan, Victor Galea, Ken Goulter, Louis Elliot and Rieks D. van Klinken
Prioritising Victorian government investment into weed biocontrol 359
Greg Lefoe and Nigel Ainsworth

Biological control of crofton weed on Lord Howe Island 361
Louise Morin, Ruth Aveyard and Sue Bower

UNDERSTANDING WEED DISTRIBUTIONS

A spatial and temporal explicit model to compare the effectiveness and cost of serrated tussock (Nassella trichotoma) management on public land 362
Ratnapriya Gajaweera, Jackie Steel, Franz Mahr, Rodney Jones, Charles Grech and Jean-Phillippe Aurambout

Potential distribution of Chloris truncata (windmill grass) in relation to climate and soils 363
Pippa J. Michael, Paul B. Yeoh and John K. Scott

Mimosa pigra seed bank remains significant 10 years after stand removal: further investigation on a floodplain in northern Australia 364
Bertrand Lukitsch and Louis Elliott

Emergence of four weed species in response to rainfall and temperature 367
Michelle Keenan and Jeff Werth

Potential distribution of Rapistrum rugosum (turnip weed) 369
Pippa J. Michael, Paul B. Yeoh and John K. Scott

Genetic variation in invasive populations of sea rocket (Cakile maritima) in southern coastal habitats of Australia 373
Sara Ohadi, Peter K. Ades, Roger D. Cousens and Rebecca Ford

Sea spurge, Euphorbia paralias, ecological assessment and testing of potential biological control agents 375
John K. Scott, Mireille Jourdan, Louise Morin, Bruce L. Webber, Paul B. Yeoh, Susan K. Ebeling and Roger Cousens
