## TABLE OF CONTENTS

**Proceedings of Materials Science & Technology 2013**

**Advanced Materials, Processes and Applications for Additive Manufacturing**

**Symposium Organizers**

Modeling of Processes for Additive Manufacturing

- **Prediction of Material Thermal Properties and Beam-Particle Interaction in Meso-Scale During Electron Beam Additive Manufacturing**
  - Page 2

- **Process Simulation of Ultrasonic Additive Manufacturing and the Prediction of Interface Bonding**
  - J. Cheng, A. Chaudhary, S. Babu, M. Norfolk, D. Foster, and D. Boone
  - Page 9

**Laser Beam Powder Bed Processes**

- **The Influence of Process Parameters and Scanning Strategy on the Texture in Ti6Al4V Parts Produced by Selective Laser Melting**
  - L. Thijs, B. Vrancken, J. Kruth, and J. Van Humbeeck
  - Page 21

- **Thermomechanical Treatment of TiAl6V4 Alloy Fabricated by Selective Laser Melting: Optimization of Microstructure and Fatigue Properties**
  - G. Kasperovich and J. Hausmann
  - Page 29

- **Fiber Laser Deposition of INCONEL 718 Using Powders**
  - Y. Zhang, X. Cao, P. Wanjara, and M. Medraj
  - Page 37

**Microstructure and Properties in Additive Manufacturing**

- **Lubricants in Deposition and Machining of Wire and Arc Additive Manufactured Structures**
  - A. Adebayo, J. Stephen, and O. Akindele
  - Page 50

**Additive Manufacturing in Practice**

- **Solid-State Additive Manufacturing of Aluminum and Magnesium Alloys**
  - K. Kandasamy, L. Renaghan, J. Calvert, K. Creehan, and J. Schultz
  - Page 59
Advanced Materials, Processes and Evaluation Methods for Aerospace and Defense Applications

Symposium Organizers ...............................................................................................................................................70

Alloy Development: Superalloys, Shape Memory Alloys, and Design for Corrosion Protection II

The Microstructure and High-Temperature Erosion Behavior of an Aluminide-Coated Turbine Blade ............71
L Zhao and P. Au

Structural Materials Performance

Microstructural Changes and Thermomechanical Fatigue Behaviour of CMSX-4 Under In-Phase (IP) Condition in the Temperature Range of 500–1100°C .................................................................82
D. Seo, S. Yandt, and D. Kim

Processing and Manufacturing

On Residual Stress Changes after Orthogonal Machining of Induction Hardened AISI 4340 Steel ..................94
W. Jomaa, V. Songmene, and P. Bocher

Alloy Development: Design Approaches and Intermetallics

Microstructure and Hardness Properties of a Diffusion Brazed Powder Metallurgy Beta Gamma Alloy Using a TINI Eutectic Braze Foil ..................................................................................................................104
T. Sawatzky, D. Seo, J. Hong, and H. Saari

Light Metals

Nanoparticles in Magnesium Alloys: Novel Nanoscale Phenomena to Significant Macroscale Effects ..........116
M. Paramsothy and M. Gupta

Mathematical Modeling and Prediction of the Heat-Treated Mechanical Properties of Aluminum Alloy Castings ........................................................................................................................................126
C. Wu and M. Makhlof

Computer Modeling of Age Hardening Processes for 7075 Aluminum Components ................................134
B. Ferguson, A. Freborg, D. Schwam, and J. McGuffin-Cawley

Data Development for Modeling Heat Treatment of 7075 Aluminum Alloy Components .........................143
D. Schwam, J. McGuffin-Cawley, B. Ferguson, and A. Freborg

Poster Session

Phase Equilibria and Tie-Line Components of the $\sigma$ and ($\gamma$, $\gamma'$, $\beta$) Phases in the Ni-Al-Re-Cr System at 1150 °C .................................................................................................................................153
S. Saito, T. Takashima, K. Miyama, K. Kurokawa, and T. Narita

Study of Liquation-Induced Crack Formation in a High-Temperature Fe-Ni Alloy during Hot Rolling ........161
S. Kuo, M. Li, and Y. Pan
Advanced Steel Metallurgy: Design, Processing, and Technological Exploitation

Symposium Organizers ..............................................................................................................................168

Advanced High Strength Steels and Sheet I

Fatigue Properties of Nitrogen Added Ultra High-Strength Low Alloy TRIP-Aided Steels .......................169
T. Hojo, J. Kobayashi, and K. Sugimoto

Advanced High Strength Steels and Sheet II

Development of Microalloyed High Strength Dual Phase Steels ..............................................................177
X. Liang, Y. Gong, M. Hua, and A. DeArdo

Functionally Graded Material: Carbon Gradient on IF Steel .................................................................185
E. Cantergiani, B. Lawrence, C. Sinclair, A. Weck, X. Sauvage, A. Fillon, M. Perez, and C. Scott

Static and Dynamic Property Relationship of Medium Mn Steels .........................................................192
H. Aydin, E. Essadiqi, and S. Yue

Effects of Microstructure on Stretch-Flange-Formability of Dual-Phase Type Cold-rolled Steel Sheets ....201
K. Takashima, Y. Toji, and K. Hasegawa

TRIP-Aided Bainitic-Ferritic Sheet Steel: A Critical Assessment of Alloy Design and Heat Treatment ...209
K. Hausmann, D. Krizan, A. Pichler, and E. Werner

Advanced High Strength Steels and Sheet III

Hot Galvanized Steel for Direct Hot Press Forming Process .................................................................219
J. Park, I. Sohn, and D. Kim

Evaluation of Recovery and Recrystallization in Cold Rolled Low Carbon Steel by Magnetic Hysteresis
Loop Measurements .................................................................................................................................225
A. Ansaripour, H. Monajatizadeh, P. Bocher, and D. Asefi

Hot Deformation Behavior of Ti-Containing Steel CP800 during Hot Rolling Simulation Tests ..............234
M. Zhang, C. Huang, Y. Zhu, X. Zhao, W. Zeng, R. Fu, and L. Li

Influence of Sheared Edge on Hydrogen Embrittlement Resistance in Ultra-High Strength Steel Sheets ....240
M. Yoshino, Y. Toji, S. Takagi, and K. Hasegawa

The Effect of C on the Hardenability of a 1.2 Mn - 0.25 Si - 0.20 Cr - 0.0030 B Steel ...............................248
L. Garza-Martinez and G. Thomas

The Influence of Specimen Fabrication Method on the Measured Tensile Properties of Press Hardened
Steel ............................................................................................................................................................258
L. Garza-Martinez, B. Hance, and D. Scherrer

Effect of Time Gap between Roughing and Finishing Stages on Mean Flow Stress (MFS) for HSLA
Steels during Hot Strip Rolling ..................................................................................................................269
F. Alghamdi and S. Yue
Effect of Ti on Mechanical Properties and Microstructure in Nb-Bearing Dual Phase High Strength Sheet Steels .......................................................... 276
O. Girina, R. Mohanty, N. Fonstein, H. Jun, D. Bhattacharya, and S. Jansto

Plate, Bar, and Structural Steels I

Homogenous Quality Differentiates in Challenging Steel Markets .......................................................... 285
H. Peintinger

Phase Field Simulation of the Dependence of Cementite Spheroidization on Alloy Elements ......................... 298
T. Kohtake, H. Sawada, and K. Kawakami

Research on Microstructures and Properties of 780MPa Grade Super High Strength Engineering Machinery Steel .......................................................... 306
L. Xu, Z. Kaihua, Y. Xiaoyu, and Z. Jun

Plate, Bar, and Structural Steels II

Heterogeneity and Microstructural Features Intervening in the Ductile-Brittle Transition of Ferrite-Pearlite Steels .......................................................... 313
R. Zubialde, P. Uranga, B. Lopez, and J. Rodriguez-Ibabe

Comparative Evaluation of Properties of a Traditional Quenched and Tempered Steel and a New, Microalloyed Bainitic Steel as Well as Processing Concepts for Forged Components ........................................... 321
D. Schwerdt, B. Kaiser, U. Wuttke, H. Hoche, M. Oeschnner, C. Berger, and T. Rekersdrees

Rolling-Sliding Contact Fatigue of Gear Steels Subject to Various Carburizing Treatments .................................. 329
P. Kramer, J. Speer, and K. Findley

Plate, Bar, and Structural Steels III

Microstructural Changes of a Construction Steel Caused by Hot Deformation ................................................. 337
J. Verdeja, M. Quintana, R. Gonzalez, and L. Verdeja

Influence of Hot-Strip Coiling Temperature on Microstructure and Properties of Ultra-Low C Ti-Bearing Enamel Steel Produced by Ultra-Fast Continuous Annealing .......................................................... 346
F. Dong, L. Du, X. Liu, and F. Xue

Predicting Combined Operational and Residual Stress Fields and Critical and Allowable Flaw Size Distributions as Well as Their Variations Due to Roll Reregrinding in Backup Rolls of Hot Strip Mills .............. 352
Y. Liu, H. Zhang, B. Somers, K. Marsden, and A. Freborg

Effects of Carbon and Niobium on Microstructure and Mechanical Properties of High Strength Steel ............ 369
F. Ji, C. Li, J. Chen, S. Tang, and G. Wang

Design and Development of a Four-Cavity Die Mould for the Production of Motor-Cycle Piston in Sedi-Enugu Nigeria .......................................................................................................................... 375
C. Ilochonwu and E. Nwonye
Stainless and High Alloy Steels I

Development of High Chromium Ferritic Steels Strengthened by Intermetallic Phases ........................................ 386

Stainless and High Alloy Steels II

Deep Cryogenic Treatment of H11 Hot Working Tool Steel ................................................................................. 400
P. Suchmann, D. Jandova, and J. Niznanska

Microstructure Phase Characterization of MMFX2 Steel Alloy by Electron Backscatter Diffraction (EBSD) ........................................................................................................................................ 409
D. Dennies, M. Pompay, A. Lupia, and J. Martinez

Stainless Steel Plate Flaws Testing and Its Metallurgical Physical Chemistry Analysis ....................................... 417
S. Liu, J. Hu, X. Zhengqi, and G. Liangliang

Study on the Evolution of Nonmetallic Inclusions in 12Cr1MoVG Steel during RH Refining Process ................. 425
L. An, J. Li, L. Wang, L. Sun, and C. Liu

Steelmaking and Casting I

Surface Microstructure Control during Continuous Casting of Micro-Alloyed Steel ............................................. 433
M. Luckl, S. Ilie, J. Six, and E. Kozeschnik

Steelmaking and Casting II

Analysis of Residence Time Distribution (RTD) of Fluid in a Four Strand Delta-Shaped Tundish, Operating under Isothermal and Non-Isothermal Conditions ........................................................................ 439
A. Hamid, M. Isac, and R. Guthrie

Mathematical Modeling for Multiport Nozzle Optimization in a Round Billet Mold ........................................... 448

Turbulent and Transitory Flows through SEN Ports and Its Effects on the Integral Flow Patterns inside the Slab Mold ................................................................................................................................. 461
I. Ramos, R. Morales, A. Huerta, and Y. Montiel

Flow Control of Liquid Steel through Design Ladle Shroud ................................................................................. 470
A. Huerta, R. Morales, and I. Calderon

Process Research of Ladle Free-Opening Rate for High Aluminum Steel in Continuous Casting .................... 478
J. Liu, T. Zhou, and H. Luo

Study on Fluid Flow in a Twelve-Strand Tundish under the Operation of Strand Closing ............................. 483
J. Zhang, J. Li, X. Li, C. Liu, and S. Yang

Water-Simulation for Optimizing Inner Structure of Special-Shape Tundish with Gas Curtain, Retaining Wall and Retaining Dam ........................................................................................................ 491
H. Yang, J. Li, and J. Zhang
Steelmaking and Casting III

Spinel (MgAl2O4) Reactivity in Molten Steel .................................................................499
N. Dogan, R. Longbottom, M. Reid, M. Chapman, P. Wilson, L. Moore, and B. Monaghan

The Dynamic Wetting Characteristics of Ladle Slags on Spinel ......................................507
H. Abdeyazdan, N. Dogan, M. Rhamdhani, M. Chapman, and B. Monaghan

Electric Arc Furnace Operation with Electromagnetic Stirring and Hot Heel ..................515
X. Zhang, J. Eriksson, and O. Widlund

Mathematical Modeling of Burden Distribution in a Blast Furnace ..................................525
D. Fu, Y. Chen, and C. Zhou

Development and Practice of Blast Furnace Hearth Deadman Core Temperature Calculation Model Based on the New Theoretical Combustion Temperature Calculation Model ..................................................533
B. Dai, J. Zhang, C. Wang, and Z. Jiang

Iron Works Advance 1750-1910 in Central Canada, Constrasted with Those in Scotland and U.S.A. .................................................................541
H. McQueen

Characteristics of Stamp Charging Cokes with Different Reactivity to CO2 ............................552
B. Gao, J. Zhang, H. Zuo, Y. Rong, and F. Li

Experimental Research on the Scale and Corrosion Inhibition of the General Prescription for BF Cooling ............................................................558
K. Jiao, J. Zhang, H. Zuo, Q. Tang, Q. Li, and F. Li

Investigation on the Dual Influence of Pansteel Pulverized Coal Combustion Process by Coal Quality and Particle Size ........................................566
F. Li, J. Zhang, C. Qi, Q. Pang, J. Rao, and C. Ma

Damage Reason Analysis of Copper Stave ......................................................................574
H. Zuo, J. Zhang, F. Li, C. Qi, and Y. Chai

Steelmaking and Casting IV

A Study of Inclusion Modification with Different Calcium Sources in Grade J55 (API 5CT) ........................................................582
S. Nafisi, J. Burns, C. D'Souza, and L. Collins

Thermodynamic Analysis for Developing Strategies for the Production of Low Phosphorous Steel Grades ..........................................................590
K. Chattopadhyay, S. Kumar, and S. Mostaghel

Modification of Steelmaking Slag by Additions of Salts from Aluminum Production and Calcium Carbide ..............................................................602
A. Spencer, G. Kipouros, S. Ferency, and A. Bader

Phosphorus Distribution Ratio between Red Mud Based Fluxes and Hot Metal ......................610
A. Danaei, Y. Yang, M. Barati, C. Ravindran, and A. McLean

Low Alloy Steel Materials Parsed New Technology-Spark Spectroscopy Analysis of Oxide Inclusions ........................................................619
B. Xu

Optimizing the Process of Desulfurization by Powder Injection in RH by Commercial Test .................................................627
H. Yang, J. Li, Z. Gao, and S. Yang
Research on Manganese Distribution between Slag and Hot Metal ................................................................. 635
   H. Zuo, C. Xu, J. Zhang, and T. Zhang

Poster Session

Study on Burden Distribution during Charging in Bell-Less Top Blast Furnace by Discrete Element Method ................................................................. 642
   J. Zhang, J. Qiu, H. Sun, G. Wang, Z. Wang, and H. Xie

Study on Lump Ores Decrepitation Behavior Mechanism ................................................................................. 650
   Z. Wang, J. Zhang, R. Wang, T. Yu, and B. Gao

Thermogravimetric Kinetic Analysis of Pulverized Coal Combustion in Oxygen-Enriched Condition .................. 658
   G. Wang, J. Zhang, T. Xu, J. Shao, H. Sun, and J. Qiu

Advances in Hydroelectric Turbine Manufacturing and Repair

Symposium Organizers ........................................................................................................................................... 667

Novel Technologies

Rubber Fiber-Reinforced Composite Materials for Hydraulic Turbine ................................................................. 668
   A. Favre, E. Fotsing, E. Ruiz, and M. Levesque

Residual Stresses / Numerical Simulation

Modeling and Simulation of Hot Radial-Axial Ring Rolling Process for Producing Power Plant Parts ............ 677
   Z. Feng and H. Champliaud

Microstructure and Properties / Manufacturing Technologies

Investigation of CA6NM Runner Failure Based on Standard Tests ................................................................. 687
   S. Prigent

Development of an Inverse Method for Material Characterization ................................................................. 694
   M. Saboori, J. Gholipour, H. Champliaud, A. Gakwaya, J. Savoie, and P. Wanjara

Fracture Toughness of 13Cr4NiMo High-Strength Steels Used in Hydraulic Turbine Runners ....................... 702
   J. Chen, Y. Verreman, F. Foroozmehr, and J. Lanteigne

Modeling and Experimental Work on Robotic Grinding Tool Profiling through Tool Orientation Control for Repair of High Curvature Surfaces ........................................................................... 712
   S. Agnard, Z. Liu, and B. Hazel

Characteristics of Electron Beam Welded CA6NM ............................................................................................... 720
   S. Sarafan, P. Wanjara, H. Champliaud, L. Mathieu, and J. Lanteigne

Study on Cold Cracking Test Methods for Low Carbon Soft-Martensitic Stainless Steel Flux Cored Arc Welding ................................................................................................................... 733
   M. Paquin, D. Thibault, P. Bocher, and Y. Verreman
Metallographic Model to Evaluate the Cavitation Resistance in Austenitic Steels and Mn Based Electrodes for Repairing Hydraulic Turbines

S. Carrizo and C. Bello

Heat Treatment

On-Site Post-Weld Heat Treatment of Welds Made of 410NiMo Steel

S. Godin, E. Boudreault, J. Levesque, and B. Hazel

Temperature Profile Optimization in a New Robotic Local Induction Heat Treatment Process

M. Gendron, E. Boudreault, B. Hazel, H. Champliaud, and X. Pham

Strain Variations of AISI 4340 Steel Undergoing Metallurgical Transformations during Induction Hardening Heat Treatment

R. Kassab, H. Champliaud, P. Bocher, J. Lanteigne, and V. Le

Cavitation Erosion

Cavitation Erosion of Francis Turbines: Follow-Up of Degradation with Vibratory Detection

F. Lafleur

Exploratory Work on the Statistical Modeling of Cavitation Erosion within the Operation Parameters of a Hydraulic Turbine

P. Bodson-Clermont, F. Lafleur, L. Perreault, J. Angers, and D. Thibault

Poster Session

Cavitation Resistance of ASP Coatings, Ultrasonic Testings and Francis Runner Field Performance Comparison

A. Pukasiewicz, A. Capra, and R. Vaz

Advances in Metal Casting Technologies

Symposium Organizers

Advances in Metal Casting Technologies - Aluminum

Main Factors Influencing the Qualitative Properties of Casts in the Process of Die Casting

S. Gaspar, J. Pasko, and S. Pavlenko

Optimizing the Squeeze Casting Process of Carbon Fiber Reinforced Aluminium Matrix Composites

M. Alam and M. Nganbe

Experimental Study on Macro Segregation Behavior in Short and Wide Range Solidification of Different Aluminum Alloys

B. Zadeh, E. Salehi, H. Nejad, and S. Zadeh

Effect of Electromagnetic Stirring on the Structure of Cast Al-4.5%Cu Alloy

M. Heyen and N. El-Kaddah

Effect of Stirring Speed and Flow Pattern on the Microstructure of a Rheocast Al-Mg Alloy

P. Melali, P. Ashtijoo, B. Niroomand, and M. Sanayei
ND in Materials Science and Technology II

Metallurgical Studies with the HIPPO Beam-line at LANSCE .................................................................942
S. Vogel

Neutron Imaging of Hydrogen in Steels .................................................................................................................945
A. Griesche, E. Dabah, A. Hilger, N. Kardjilov, I. Manke, and T. Kannengiesser

Quantitative Analysis of Elastic and Plastic Response of Advanced Mg Alloys during Creep at 170°C
Using Neutron Diffraction Techniques ..................................................................................................................951
W. Threlfall, L. Bichler, and D. Sediako

Solidification and Residual Stresses / Deformation Behavior

Effect of Heat Treatment on the Residual Strain Levels in Welded AR200 Steel Joints ........................................962
V. Neykov, L. Bichler, and D. Sediako

Solidification Analysis of an Al-5 wt% Cu Alloy Using In-Situ Neutron Diffraction .....................................964
F. D'Elia, C. Ravindran, D. Sediako, and R. Donaberger

Solidification of Mg-9Al Alloy Using In-Situ Neutron Diffraction .....................................................................972
A. Elsayed, D. Sediako, and C. Ravindran

Analysis of the Stress-Free Interplanar Spacing during Solution Heat Treatment of 319 Al Alloy Engine
Blocks via In-Situ Neutron Diffraction ..................................................................................................................980
A. Lombardi, D. Sediako, C. Ravindran, and R. MacKay

In Situ Neutron Diffraction Measurements of the Shear Modul GHKL for 12L14 Steel .................................989
C. Hubbard, J. Bunn, R. Woracek, D. Penumadu, and P. Cornwell

Hydrogen Storage

In-situ Chemistry Mapping of Hydrogen Storage Materials by Neutron Diffraction .....................................996
E. Payzant, R. Bowman Jr., T. Johnson, and S. Jorgensen

In-Situ Neutron Powder Diffraction on TiF₃-Catalyzed Magnesium for Hydrogen Storage Applications ..........1004
R. Flacau, X. Tan, M. Danaie, H. Fritzsche, and D. Mitlin

Interdiffusion of Fe and Mg Layers during Annealing and Deuterium Absorption ...........................................1010
H. Fritzsche, S. Bilodeau, R. Flacau, P. Jain, J. Huot, W. Kalisvaart, and D. Mitlin

Neutron Powder Diffraction of the Mg₉Pd and Mg₉Pd + Fe Hydrogen Storage System .................................1018
J. Lang, J. Roquefere, J. Dufour, A. Yonkeu, and J. Huot

Ensuring Safety in Academic and Industrial Lab Settings

Symposium Organizers ........................................................................................................................................1027
Ensuring Safety in Academic and Industrial Lab Settings

Chemical Exposure in University of Arizona Laboratory Spaces ................................................................. 1028
B. Tobin and P. Vandiver

Green Composite Materials: Development, Manufacturing and Testing

Symposium Organizers .................................................................................................................................. 1035

Green Composite Materials

Electrospinning Composite Fibres of Cellulose Nanofibrils ................................................................. 1036
H. Gopalakrishna and J. Youngblood

Using Fly Ash to Improve Natural Fiber's Durability in Cement Based Composite ................................. 1044
J. Wei and C. Meyer

Poster Session

Morphological and Microstructural Characterization of Bio-Coke as Potential Anode Raw Material for Aluminum Industry ................................................................. 1057
X. Huang, D. Kocaefe, D. Bhattacharyay, and Y. Kocaefe

Light Metals for Transportation

Symposium Organizers .................................................................................................................................. 1065

Primary Metals Processing

Primary Aluminum Processing in Quebec & Canada ................................................................................ 1066
G. Jacques

Low Cost Solutions for HF Emission Reduction: A Success Story for Rio Tinto Alcan Smelters .............. 1070
J. Bernier and M. Dion

Pot-to-Pot Busbars Thermoelectric Model ........................................................................................................... 1077
S. Guerard and D. Ouillon

Process Modelling and Simulations

Mathematical Modelling of Microshrinkage Formation during Solidification of A356 Alloy Castings .......... 1086
A. Patel and L. Nastac

Further Improvement of Aluminium Reduction Cell Resistance Slope Calculation .................................. 1094
M. Dupuis

Practical Use of Fluid Flow and Solidification Modeling in the Shape Casting of Light Metals (Al, Mg, Ti) .......................................................................................................................................................... 1106
F. Chiesa, B. Duchesne, and B. Tougas
Mathematical Modeling and Validation of an Al-Mg-Sc-Zr Alloy Strip, Produced Using Horizontal Single Belt Casting (HSBC) ................................................................. 1113
  S. Ge, M. Celikin, M. Isaac, and R. Guthrie

Modelling of Magnesium DC Casting Process Using a 3D Turbulent CFD Model ......................................................... 1124
  M. Hasan and L. Begum

Numerical Approach for Development of High Elastic Casting Aluminum Alloys ......................................................... 1134
  K. Lee, H. Lee, H. Park, J. Lee, and H. Park

Numerical Simulation of Flow, Temperature and Composition Variation in the Snout and Sink Roll Region of Continuous Galvanizing Baths ......................................................... 1145
  F. Ajersch, F. Ilinca, and F. Goodwin

Quantification of Primary Dendritic and Secondary Eutectic Undercoolings of Rapidly Solidified Al-Cu Droplets ....................................................................................................................... 1153
  A. Bogno, P. Khatibi, H. Henein, and C. Gandin

**Alloy Development and Casting Techniques I**

Titanium: Rethinking the Value of Non-Traditional Light Metals for Transportation ....................................................... 1161
  W. MacDonald and Y. Kosaka

**Session III: Alloy Development and Casting Techniques I**

Factors Influencing Alpha Case Thickness with Calcia Stabilized Zirconia Face Coat Shelling System for Investment Casting of Ti 6Al-4V ....................................................................................................................... 1164
  G. Morin, G. Marin, M. Parr, and L. Forget

**Alloy Development and Casting Techniques I**

Alpha Case Thickness: A Comparative Study of Evaluation Techniques and the Relation Between Them ...... 1171
  A. Bois-Brochu, M. Parr, G. Morin, J. Carignan, and G. Marin

Titanium Cast Valves Repair with GTAW Process ....................................................................................................................... 1179
  T. Ouellet, B. Tougas, G. Marin, and O. Jacob

Characterization of Fir-Tree Zone in AA1050 DC Cast Ingot ................................................................................................. 1187
  Z. Zhang, G. Li, and X. Chen

Different Effects of Neodymium and Strontium on the High Temperature Oxidation and Ignition Resistance of Pure Magnesium ................................................................................................. 1195
  D. Aydin and M. Pekguleryuz

Effect of Fe and Sr in the Evolution of Iron Based Intermetallic Phases in Al-Si Hypoeutectic Alloys ............... 1203
  A. Gorny, J. Manickaraj, and S. Shankar

Grain Refinement of Magnesium Alloys Using Ti-B, Ti-C and Al-B Based Additions: A Review ............... 1212
  A. Elsayed, S. Sin, and C. Ravindran

The Effects of Mg, Mo and Cr on the Microstructure and Elevated Temperature Mechanical Properties of an Al-Si-Cu-Mg Alloy ....................................................................................................................... 1220
  A. Farkoosh, X. Chen, and M. Pekguleryuz
Advanced Manufacturing I

Mechanical Strength at the Interface of a Steel Axle Inserted in an Aluminum Permanent Mold Casting ..........J. Grenier, F. Chiesa, N. Giguere, and F. Lanicot

SEED Rheocasting: A Reliable Route to Premium Grade Semi-Solid Feedstock ............................................1236
P. Cote and G. Pucella

Continuous Casting and Product Characterization of Al-Mg-Se-Zr Alloys Strips Produced via Horizontal Single Belt Casting (HSBC) ..........................................................1243
M. Celikin, S. Ge, D. Li, L. Calzado, M. Isac, and R. Guthrie

Grain Structure Evolution in Aluminium to Steel Ultrasonic Spot Welding ..................................................1252
F. Haddadi and P. Prangnell

R. Ghiaasiaan, X. Zeng, and S. Shankar

Fabrication and Materials Characterization I

Meso-Scale Modelling on Ridging or Roping of Aluminium Alloys .................................................................1274
L. Qin, M. Seefeldt, and P. Van Houtte

Synthesis of Al-TiB2 Nanocomposite Using High Frequency Induction Melting ..............................................1284
A. Nabawy, Z. Zhang, and X. Chen

Deep Drawing of Aluminum; J.W. Lengdridge (ALCAN 1948–49, The Tool Engineer) ...................................1294
H. McQueen

Advanced Manufacturing II/Alloy Development and Casting Techniques II

The Effect of Temperature on the Formability of a High Strength Aluminium Automotive Alloy ....................1304
R. Nolan, M. Kulas, P. Prangnell, and J. da Fonseca

Classification of Papers Published in Canadian Metallurgical Quarterly (CMQ): Topic Distributions in the First 50 Years (1962 Vol.1 to 2011 Vol. 50) .................................................................1312
H. McQueen and N. Kilingi

Influence of Nickel Addition on Cast Microstructure of a Niobium Rich Titanium Aluminide .........................1323
B. Tougas and F. Chiesa

Microstructure and Natural Hardening of AlMg5Si2Mn Casting Alloy ............................................................1331
V. Boyko, T. Link, N. Korzhova, and K. Mykhalenko

Effect of Silicon on Thermal Conductivity of Al-Si Alloys ..............................................................................1339
N. Tang, J. Chen, and H. Hung

Fabrication and Materials Characterization II

Effects of Post-Weld Heat Treatment on the Mechanical Properties of AA6061 Friction Stir Welded Joints .........1344
P. Wanjara, S. Larose, J. Gholipour, and M. Brochu
A New and Versatile Method to Produce Aluminum Multi-Layer Clad Product ...............................................................................1352
A. Larouche and D. Bernard

Understanding the Effect of Welding Parameters in Laser-GMA Hybrid Welding of an Aluminum Alloy Using Full Factorial Design..................................................................................................................1363
O. Ola and F. Doern

Frequency Modulation Effect on the Solidification of Alloy 718 Fusion Zone ........................................................................1375
S. Manikandan, D. Sivakumar, D. Karthikesan, K. Rao, and M. Kamaraj

Poster Session

Development of Mechanical Properties in High-Elastic Aluminum Alloys ..................................................................................1383
H. Lee, K. Lee, H. Park, T. Lee, and J. Lee

Fabrication and Characterization of Al-Based In Situ Composites Reinforced by Al₃V Intermetallic Compounds .................................................................1389
A. Omran

Magnesium Technology

Symposium Organizers .................................................................................................................................................................1401

New Alloy and Microstructure I

Structure and Properties of Twin-Roll Cast Mg Alloy Sheets ........................................................................................................1402
S. Park, J. Bae, B. Suh, M. Shim, D. Kim, and N. Kim

Promotion of Texture Weakening in Magnesium by Alloying and Thermomechanical Processing ........................................1405

Study of Mg-Y-Zn Rod Produced by ECAP Powder Compaction .................................................................................................1414
R. Lapovok, H. Ng, J. Nie, Y. Estrin, and S. Mathaudhu

Effect of β-Distribution on the Strength and Ductility of TTMP AZ61L Sheet ................................................................................1423
T. Berman, W. Donlon, R. Decker, T. Pollock, and J. Jones

New Alloy and Microstructure II / Forming

Enhancing the Plasticity of Magnesium Alloys .................................................................................................................................1426
R. Mishra, Q. Yu, and A. Minor

Influence of Initial Texture on Mechanical Response of AZ31B and ZEK100 Mg Sheets .................................................................1437
S. Kurukuri, M. Worswick, R. Mishra, and J. Carter

Anisotropy of Mechanical Behaviour of WE43 Magnesium Alloy Sheet Under Compressive Shock Loading ........................................1441
H. Asgari, J. Szpunar, and A. Odeshi
Deformation I

Alloying Effects on Non-Basal Slips in Magnesium Single Crystals ................................................................. 1449
S. Ando, A. Kodera, T. Yagi, M. Tsushida, and H. Kitahara

Creep of Pure Magnesium during High-temperature Microindentation ............................................................... 1455
M. Haghshenas, V. Bhakhri, and R. Klassen

Deformation Behavior of Pure Mg Single Crystals through ECAP Die .............................................................. 1459
H. Kitahara, F. Maruno, M. Tsushida, and S. Ando

In Situ Damage Examination during Room Temperature Deformation of Commercially Pure Magnesium
Using X-Ray Micro-Computed Tomography ....................................................................................................... 1461
M. Nemcko and D. Wilkinson

Corrosion and Bio-application

Corrosion Behaviour of Friction Stir Welded Mg Alloy Joints for Automotive Applications ............................ 1466

Examination of Microstructural Liquid Phase Behavior during Heat Treatments of Doped-PbTe Thermoelectric Materials ................................................................................................................................................. 2616
S. Langan and D. Birnie

Mechanical Properties of PbTe Processed by HPT (High-Pressure Torsion) ..................................................... 2623
J. Santamaria, J. Alkorta, and J. Sevillano
Metal and Polymer Matrix Composites

Metal Matrix Composites III

Solid State Diffusion Bonded Ti/Al-6081 Alloy Based Multilayer Composites.................................................................2630
Y. Fouad and B. Rabeeh

Polymer Matrix Composites

A Combined Analytical, Numerical, and Experimental Study of Dynamic Response for Orthotropic Laminated Composite Helical Spring (OLCHS) Due to Impact Load.................................................................................................2638
M. Taufiq and F. Al Shamaa

Multifunctional Oxides

Multifunctional Oxides: Synthesis and Characterization II

Growth and Physical Properties of Highly (111) Oriented LBCO Thin Films on Si Substrates.........................2648
D. Hong, M. Gao, Y. Zhang, B. Zeng, W. Liang, B. Wu, and Y. Lin

Poster Session

Manufacturing, Structure and Properties of PZT Coatings Produced by Electrophoretic Deposition on Different Sample Layers........................................................................................................2656
N. Korobova, S. Timoshenkov, and V. Vodopyanov

Nanostructured Magnetoelectrics & Multiferroics

Engineered Anisotropy in Magnetoelectrics

Magnetoelectric Switching in Multiferroic Nano-Heterostructures .................................................................2663
W. Kleemann, P. Borisov, and C. Schmitz-Antoniak

Optical and X-ray Imaging Techniques for Material Characterization

Material Characterization with X-ray Techniques II

Photoemission Study of Zircaloy-4 Oxide Structure via Synchrotron Radiation.........................................................2671
H. Akhiani, X. Cui, and J. Szpunar

Poster Session

Measurement of Magnetic Quadrupole-Electric Dipole Mixing Ratios and Angular Distribution Parameters in Atomic Inner-Shell Transitions ..................................................................................2679
R. Durak, M. Kacal, F. Akman, F. Akdemir, O. Aksakal, and M. Turhan
Optical Nanomaterials for Photonics/Biophotonics

Rare Earth Based Nanomaterials

The Synthesis of Catalytic-upconversion Nanoparticles and Their Teragnostic Applications .................................2687
A. Dulda, C. Yavuz, M. Yavuz, and N. Kocak

Metal and Plasmonic Nanostructures

Sharp Gold Based Nanoprobes for Cell Imaging through Dark-Field Microscopy .............................................2695
F. Lerouge, J. Navarro, D. Manchon, É. Cottancin, F. Chaput, M. Charreyre, A. Favier,
and S. Parola

Particulate Composites

Particulate Composites I

Structure and Properties of AA 7075 Reinforced with Nanometric ZrO2 Obtained by Ball-Milling ..................2703
S. Martinez, J. Hernandez-Rivera, J. Garcia-Rocha, L. Hernandez-Hernandez, C. Elias-Alfaro,
R. Martinez-Sanchez, and J. Cruz-Rivera

Particulate Composites II

Characterization of Petroleum Coke and Butts Used in Anode Manufacturing in Aluminum Industry ..........2710
A. Sarkar, D. Kocaefe, Y. Kocaefe, D. Bhattacharyay, B. Morais, and M. Pouliot

Pb-free Solders and Advanced Interconnecting Materials

Interconnecting Methods

Urgent Need for Lead Free Solder Alloy .................................................................2721
M. Metkhail and M. Kamal

Electromigration and Whiskers

Metallurgical and Statistical Analysis of Whisker Growth in Electronic Assemblies .................................2729
A. Delhaise, P. Snugovsky, S. Meschter, Z. Bagheri, E. Kosiba, and D. Perovic

Mechanical Behavior

Intermixing Reactions in Nanometric Cu/Sn and Cu/Ni/Sn/Ni Multilayer Interconnects .................................2737
P. Chia and A. Haseeb
Phase Stability, Diffusion, Kinetics and Their Applications (PSDK-VIII)

Gibbs Award Honorary Session I: Celebrating Peter Voorhees

Coarsening in Solid-Liquid Mixtures: Overview of Experiments on Shuttle and ISS ......................................................... 2745
  W. Duval, R. Haweraat, T. Lorik, J. Thompson, E. Gulsoy, and P. Voorhees

Microstructure Evolution: Modeling and Experiments

A Phase Field Model for Stress Induced Martensitic Phase Transformation in Zirconia ..................................................... 2753
  M. Mamivand, M. Zaeem, and H. El Kadiri

Predicting and Combating Corrosion and Degradation of New Coating and Material Technologies

Corrosion Testing of New Coating Technologies

Biofilm Leading to Corrosion on Materials Surfaces and the Moderation by Alternative Electro-magnetic Field ................................................................. 2761
  H. Kanematsu, N. Hirai, Y. Miura, H. Itoh, D. Kuroda, and S. Umeki

Recent Advances in Low-temperature Processes for the Development of RF, EO, Magnetic and Electronic Bulk and Thin Film Crystals

RF, EO and Microelectronic Materials

Numerical Characterization of the Computational Domains for Crystals Grown by Bridgman Technique ......2768
  S. Maris

On the Impurity Distribution Induced by Surface Tension Gradients: Aluminum-Doped Silicon Cylindrical Bars Grown from a Melt by the EFG Method ........................................................................................................ 2774
  T. George and L. Braescu

Development of Novel Wide Bandgap Crystal: Growth and Characterization of β-Ga2O3 ................................................. 2782
  T. Raja, V. Razdan, B. Arnold, D. Thomson, N. Prasad, R. Rai, and N. Singh

Effect of Impurities on the Dielectric and Resistivity of CaCu3Ti4O12 Capacitor Material ................................................. 2788
  M. Gillan, V. Razdan, R. Yanamaddi, D. House, B. Arnold, D. Machuga, and N. Singh

Numerical Study of the Influence of Solid on the Fluid Flow and Interface Deflection in Case of Crystals Grown by Bridgman Technique ................................................................................................................ 2793
  S. Maris

Optimization of Parameters for the Growth of Large Crystals from Melt ................................................................. 2799
Recent Approaches and Challenges in Smart Coatings

Nanostructured Superhydrophobic Surfaces

Nanostructured Superhydrophobic ZnO Surface Layer on Al-Substrate ............................................................. 2804
D. De, D. Sarkar, and D. Kocaeffe

Smart multi-functional Coatings

Corrosion Resistant Chemical Conversion Coatings of Automatic Healing Properties for Magnesium Alloys ................................................................................................................................................................... 2810
A. Makhlouf

Scanning Probe Techniques for Functional Materials

Surface Potential and Laser Scanning Techniques

Atomic Force Microscopy and Kelvin Probe Force Microscopy to Study Alzheimer's Disease .........................2817
F. Hane, E. Drolle, Y. Choi, S. Attwood, R. Gaikwad, and Z. Leonenko

Optical Near Field Techniques

Nanoindentation Studies on Lithium Disilicate Glass Ceramics ............................................................................. 2825
C. Smith and L. Yin

Sintering and Related Powder Processing Science & Technologies

Powder Metallurgy

Study on the Bond Mechanism of Vanadium Titano-Magnetite Pellets Mixed with Coal Powder .........................2832
X. Xing, J. Zhang, Z. Liu, Z. Wang, X. Liu, and S. Ren

Fundamental Research of Ore Matching Optimization on the Basis of Ore Dressing Operation .........................2840
C. Liu, J. Li, Y. Gao, and H. Tang

Fundamental Research on Ore Matching Optimization by Experiment ............................................................... 2849
Y. Gao, J. Li, C. Liu, and H. Tang

Advances on Sintering II

3D Numerical Investigation of Doping and Multi-Materials Effect on Microstructural Evolution of a Granular Packing by Surface and Volume Diffusion ........................................................................................................... 2858
H. Tossoukpe, F. Valdivieso, J. Bruchon, and S. Drapier

Reaction Synthesis of (V, Nb)C Particle Reinforced Iron Matrix Composites by In-Situ Powder Sintering ......2867
Y. Xian, Y. Wang, Z. Sun, and Q. Zhai
Poster Session

Practice of Producing Acid Sinter and Study on Its Metallurgical Properties ...................................................... 2875
H. Zuo, T. Zhang, and J. Zhang

The Application of Nickel Laterites Ores in Sintering ........................................................................................ 2884
H. Zuo, T. Zhang, and J. Zhang

Surface and Microscopic Characterization of Manufactured Nanostructured Materials

Surface and Microscopic Characterization of Manufactured Nanostructured Materials

H. Niakan, Q. Yang, C. Zhang, and J. Szpunar

Substrate Temperature Effects on Adhesion and Particle Size of Magnetron Sputtered Deposited Gold Nano Thin Films on Fluoroethylene Polymer ......................................................................................... 2898
A. Boardman and A. Tiwari

Analysis of Copper Oxide Nanofibers Synthesized via Electrospinning .............................................................. 2906
A. Khalil, R. Hashaikeh, and M. Khraisheh

Surface Protection for Enhanced Materials Performance: Science, Technology, and Application

Poster Session

Influence of Pack Cementation Parameters on the Alumina Formation on Ni Based Alloys ........................................ 2914
R. da Silva and A. D'Oliveira

Oxidation Behavior of Ceramic Coatings Synthesized In-Situ by Plasma Transferred Arc ........................................ 2920
E. Takano, S. Pianaro, and A. D'Oliveira

Synthesis and Structural and Functional Characterization of Thin Films and Self-assembled Nanostructures

Nanostructure Growth II

Synthesis of Mesoporous Anatase Y/TiO₂ Nanosheets with Exposed {116} Facets from Waste Tricolor Fluorescent Powder and Related Photocatalytic Properties ................................................................. 2926
Y. Wu, Q. Zhang, X. Yin, M. Zhou, and T. Zuo

Nanostructure Growth III

Chemical Synthesis and Structural Analysis of Gd₂O₃ Nanoparticles for Optical Applications .................................. 2934
E. Avila-Davila, F. Carrillo-Romo, H. Dorantes-Rosas, M. Perez-Labra, V. Lopez-Hirata, and J. Hernandez-Avila
Synthesis of ZnO Nanoparticles and Nanoparticulate Thin Film by Sol-Gel Method ................................................................. 2941
   M. Amirmaleki, J. Samei, and M. Vaezi

Optoelectronics & Photonics

Ilmenite-hematite Solid Solution Thin Films with Atomically Smooth Surface Grown on C-plane Sapphire Substrates .......................................................... 2949
   T. Matoba, K. Fujita, S. Murai, and K. Tanaka

Poster Session

Fabrication of 3D Micro-vascular Network Based Carbon Nanotube Materials by the Direct-write Microfluidic Infiltration Approach for Self Healing Applications .......................................................... 2957
   B. Aissa, H. Hena-Zamal, M. Asgar-Khan, E. Haddad, D. Therriault, and F. Rosei

A Study on CuInSe2 Thin Films Deposited by Spray Pyrolysis Technique .................................................................................................................. 2964
   M. Saglam, B. Guzeldir, R. Durak, and A. Ates

The Properties of the ZnInSe Thin Film Grown by Silar Method .......................................................................................... 2970
   R. Durak, S. Aktas, B. Guzeldir, and M. Saglam

Titanium and Titanium Alloys:
Processing, Deformation Behavior, Properties and Applications

Mechanical Behavior

Development of a New Alpha/Beta Titanium Alloy for Gas Turbine Aerofoils ........................................................................ 2975
   P. Davies, M. Whittaker, and M. Thomas

Deformation Mechanisms and Surface Measurements

Assessment of the Surface Chemistry of Titanium and Titanium Alloys ........................................................................ 2983
   J. Bonini and A. Brown

Optimization of Cr and O Contents in Beta-Type Ti-Cr-O Alloys for Obtaining Both Larger Changeable Young's Modulus during Deformation and Higher Strength for Use in Spinal Fixation Applications ........................................... 2991
   M. Nakai, M. Niinomi, J. Hieda, K. Cho, K. Narita, and H. Liu

Densification, Forming, and Heat Treatment Processes

Effect of Heat Treatment Processes on the Corrosion Behavior of NiTi Shape Memory Alloy Material in Chloride and Acidic Media ........................................................................ 2998
   S. Oladele, A. Samuel, and B. Ikotun

Pure Titanium with High Strength and Excellent Ductility by Solid Solute Oxygen Strengthening via Powder Metallurgy Route ........................................................................ 3004
   K. Kondoh, S. Li, S. Bin, T. Mimoto, H. Imai, and J. Umeda

Investigation of Powder Metallurgy Titanium Matrix Composites by Planetary Ball-Milling of Ti Powder Dispersed with Vapour Grown Carbon Nanofibers ........................................................................ 3009
   S. Li, K. Kondoh, B. Sun, H. Imai, and J. Umeda
