2013 IEEE Radiation Effects Data Workshop

(REDW 2013)

In conjunction with NSREC 2013

San Francisco, California, USA
8 – 12 July 2013
2013 REDW List of Papers

Guide to the 2012 IEEE Radiation Effects Data Workshop Record 1
David M. Hiemstra

Compendium of Recent Total Ionizing Dose and Displacement Damage 7 for Candidate Spacecraft Electronics for NASA
Alvin J. Boutte, Donna J. Cochran, Dakai Chen, Michael J. Campola, Jonathan A. Pellish, Raymond L. Ladbury, Edward P. Wilcox, Jean-Marie Lauenstein, Robert A. Gigliuto, Kenneth A. LaBel and Martha V. O'Bryan

Compendium of TID, Neutron, Proton and Heavy Ion Testing of Satellite Electronics 16 for Los Alamos National Laboratory
Tom Fairbanks, Heather Quinn, Justin Tripp, John Michel, Adam Warniment and Nick Dallmann

Compendium of Recent Single Event Effects for Candidate Spacecraft Electronics for NASA 22

Compilation of Electronic Components SEE Test Results 30

Compendium of Radiation-Induced Effects for Candidate Particle Accelerator Electronics 33

SEE and TID Test Results of Candidate Electronics for LHC Power Converter Control 40
Slawosz Uznanski, Benjamin Todd, Arend Dinius, Quentin King, Karol Motala, Markus Brugger, Giovanni Spiezia and Evangelia Gousiou

Compendium of Total Ionizing Dose, Displacement Damage and Single Event Transient 45 Test Data of Various Optocouplers for ESA

TID Tolerance of Popular CubeSat Components 51

TID Test Results for 4th Generation iPad™ 55
S. M. Guerlin, G. R. Allen, S. S. McClure and K. A. LaBel

Cosmic Ray Effects on Personal Entertainment Applications for Smartphones 61
Yuyuan Chen

Qualification of an Automotive-Grade, State-of-the-Art ASIC 65 for Natural Space Applications
L. Hoffmann and V. Lam
Single Event Upset Characterization of the Spartan-6 Field Programmable Gate Array Using Proton Irradiation
David M. Hiemstra and Valeri Kirischian

Single Event Effect Rate Analysis and Upset Characterization of FPGA Digital Signal Processors
Roberto Monreal, Gary Swift, Y. C. Wang, Michael Wirthlin and Brent Nelson

Static, Dynamic, and Application-Level SEE Results for a 49-Core RHBD Processor
B. Wie, M. K. Plante, A. Berkley, S. M. Guertin and R. J. Nejad

The Reliability of Software Algorithms and Software-Based Mitigation Techniques in Digital Signal Processors
Heather Quinn, Tom Fairbanks, Justin L. Tripp and Andrea Manuzzato

Characterization and Mitigation of the MGT-Based Aurora Protocol in a Radiation Environment
Alexander Harding, Kevin Ellsworth, Brent Nelson and Michael Wirthlin

VCSEL and Photodiode Proton Test Results for an Optical Communications Link
Steven A. Rogacki, Jonathan A. Pellish, Steven Persyn, Paul W. Marshall and John Stone

Single Event Effect and Total Ionizing Dose Results of Highly Scaled Flash Memories
Farokh Irom, Duc N. Nguyen and Gregory R. Allen

Single Event Response of the Samsung 16G NAND Flash
Timothy R. Oldham, Edward P. Wilcox and Mark R. Friendlich

Total Dose and Single Event Effects Testing of the Intersil ISL70444SEH Hardened Operational Amplifier
N. W. van Vonno, B. Williams, R. Hood, E. J. Thomson and S. K. Bernard

Radiation Testing Results for the Intersil ISL71590SEH Temperature Sensor

Radiation Tolerant MESFET-CMOS Low Dropout Linear Regulator for Integrated Power Management at the 45nm Node
Trevor J. Thornton, William Lepkowski, Seth J. Wilk, Michael Goryll, Bo Chen, Jason Kam, Berta Bakkaloglu and Keith Holbert

Single Event Transient (SET) Susceptibility of the Texas Instruments LM139 Quad Comparator under Proton Irradiation
Razvan Gaza and Jaime Cooper

Single Event Effects Sensitivity of 180 and 350 nm SiGe HBT Microcircuits
R. Koga, C. Paul, D. Romeo, V. Petrosyan and J. George

Effects of Ion Energy on Single Event Effect Performance of LM139 and AD9042
Stephen E. Stone, Alexander L. Bogorad, Justin J. Likar, Robert E. Lombardi and Roman Herschitz

Total Ionizing Dose Characterization of the Calibration Circuit of Texas Instruments’ ADC12D1600CCMLS, 12b, 3.2 GSPS Analog-to-Digital Converter
Kirby Kruckmeyer, Thang Trinh and Linton Park
Single Event Characterization of a Family of Voltage Supervisors Designed in a 0.35-µm Triple-Well CMOS Technology
David B. Kerwin, Younes Lotfi, Alfio Zanchi, Ken Merkel, Anthony Wilson and Craig Hafer

Dose Rate Effects on Bipolar Components
F. Toscano, A. Ouellet, F. Tilhac and T. Lagarrigue

Single Event Burnout Observed in Schottky Diodes
Jeffrey S. George, Rocky Koga, Robert M. Moision and Arturo Arroyo

Specific Characterization for Destructive Single Event Effects on GaAs Power P-HEMT MMIC
R. Marec, A. Bensoussan, J. L. Muraro, L. Portal, P. Calvel, C. Barillot, M. G. Perichaud, L. Marchand and G. Vignon

Radiation Effects of High Voltage MESFETs at the 45nm Node
Seth J. Wilk, William Lepkowski, Bo Chen, Jason Kam, Michael Goryll, Keith Holbert and Trevor J. Thornton

Recent Radiation Test Results for Power MOSFETs
Jean-Marie Lauenstein, Alyson D. Topper, Megan C. Casey, Edward P. Wilcox, Anthony M. Phan, Hak S. Kim and Kenneth A. LaBel

Characterization and Analyses of RadHard-by-Design CMOS Quad Operational Amplifiers
Ray Benson, Paul Resch and Randall Milanowski

Hardness Assurance for Total Dose and Dose Rate Testing of a State-of-the-Art Off-Shore 32 nm CMOS Processor
Kenneth A. LaBel, Robert A. Gigliuto, Carl M. Szabo Jr., Martin A. Carts, Matthew Kay, Timothy Sinclair, Matthew Gadlage, Adam Duncan and Dave Ingalls

In-Situ TID Test of 4-Gbit DDR3 SDRAM Devices
Martin Herrmann, Kai Grürmann, Fritz Gliem, Hagen Schmidt and Véronique Ferlet-Cavrois

In-Situ, Low Dose Rate, TID Test of the Power Supply Block of RadEx, a CubeSat Class Radiation Experiment Module
Jiri Hofman

Single-Event Effect Qualification of 24 Bit Analog-to-Digital Converters
Leif Z. Scheick, Greg R. Allen and Larry D. Edmonds

Compendium of Single Event Effects Radiation Test Results from Ball Aerospace & Technologies Corp.
