# TABLE OF CONTENTS

Developing Strategies To Address The Top Five ATM Safety Priorities ................................................................. 1  
T. Blajev, E. Pooley  

Shared Skies: Safe Integration of Remotely Piloted Aircraft: Challenges for Safely Operating in the  
National Airspace System ................................................................................................................................. 8  
S. Cassidy  

Smoke, Fire and Fumes in Transport Aircraft: Past History, Current Risk and Recommended Mitigations .......... 14  

Elevating the Governance of Safety to the Corporate Level through Enterprise Risk Management .......................... 80  
D. Deveau  

Why Are Unstable Approaches Continued? A Qualitative Analysis Of The Cognitive Human Factors Behind The Flight Data ........................................................................................................................................... 90  
E. Hiltermann  

LOSA and TEM: Insights Gained from 100 LOSA Projects and 20,000 Observations ........................................ 95  
J. Klinect, P. Murray, H. Webbon  

Training Interventions for Managing Startle During Unexpected Critical Events ............................................... 116  
W. Martin, P. Murray  

A Practical Look at the Road to Safety Culture ...................................................................................................... 126  
R. Sumwalt III  

Comparing Runway Excursion Factors .............................................................................................................. 138  

Fatigue Risk Management System (FRMS) - A Pilot's Perspective ................................................................. 157  
D. Wykoff  

The Research of One Engine Inoperation for RNP .............................................................................................. 167  
Z. Wang, Y. He
