74th European Association of Geoscientists and Engineers Conference and Exhibition 2012 (Workshops)

Incorporating SPE EUROPEC 2012

Copenhagen, Denmark
4-7 June 2012
# TABLE OF CONTENTS

Exploration and Development of the North Sea Chalk Low Permeability System .................................................. 1  
Joan Megson  
The Dynamic Chalk Sea: The Depositional Effects of a Collapsed Shelf-break Front, Erosional Contour Current Systems and Dry Borderlands ......................................................... 2  
Finn Surlyk  
Ecology of Lower Cretaceous Chalk .............................................................................................................................. 7  
Jörg Mutterlose  
Chalk As a Reservoir .......................................................................................................................................................... 8  
Ida Fabricius  
Facies Change and Sequence Expression Along a Proximal to Distal Transect in the Lower Cretaceous Chalk of the Tuxen and Sola Formations (Danish Sector North Sea Basin) ........................................... 9  
Frans Van Buchem, Maiwenn Herpe, M. Simpson, Jörg Mutterlose, John Ineson  
Reservoir Facies Variation in the Upper Cretaceous and Danian Chalk of the Danish Central Graben ...................... 10  
Govert Buijs, Ulla Hoffman  
Upper Campanian - Maastrichtian Holostratigraphy of the Stevns-1 Core, Denmark ................................................. 11  
Susanne Lil Rasmussen, Finn Surlyk, Lars Stemmerik, Nicolas Thibault, Kresten Anderskov  
A Redeposited Chalk Reservoir (Upper Maastrichtian–Danian) in the Oseberg Field, Northern North Sea .................. 13  
Ali Jahanpanah, Jon Ineson  
The Chalk of the Ekofisk Field, Norwegian North Sea – An Example from the Cores of Well 2/4-X 32 ............... 15  
M. Gennaro  
Comparing Core Facies with Image Log Data, a Tool to Better Understand the Fractures Distribution in the Reservoir - An Example from the Wells 2/7-B9A and 217B 7A in the Eldfisk Field, North Sea ........................................... 18  
Fernando De Miguel  
Advanced Microseismic Data Analysis and Its Application to Unconventional Reservoir Characterization .............. 20  
Peter M. Duncan  
Novel Workflow for Shale Gas Reservoir Characterization .......................................................................................... 25  
Lars Sonneland, Geir V. Dahl, Martin Haage, Hilde Borgos  
Comparison of Fracturing Techniques for Unconventional Reservoirs ................................................................. 28  
Klaas Van Gijzenbeek, Mark Van Domelen  
Geomechanics for Unconventional Resources .................................................................................................................. 33  
Roberto Suarez-Rivera  
Reservoir Simulation for Unconventional Reservoirs – Advances and Future Challenges ........................................ 38  
A. (Tony) Settari  
Developments in Strategic Decision-Making for Water Management in Unconventional Gas Plays ....................... 43  
Melinda G. Truskowski  
DS3 Recording for Faster Seismic Acquisition Rate without Data Compromise ................................................. 46  
S. Mahrooqi, S. Rawahi, S. Yarubi, S. Abri, A. Yahyai, K. Hunt, F. Cloow  
Broadband Full-Azimuth 3D Land Seismic Acquisition – Managing 100,000 Channels, Over 20,000 Vibrator Source Points, and 24 Terabytes of Uncorrelated Data Per Day ................................................................. 48  
Peter I. Pechols, John Kigley  
Acquisition and Processing of Dithered Vibroseis Data: A Case History ................................................................. 50  
Claudio Bagagaini, Mark Daly, Ian Moore  
Simultaneous Shooting, Today and Tomorrow .................. 52  
Ray Abma, Jim Keggin  
Lessons Learned from Commercialization of Marine Simultaneous Source Acquisition ........................................... 55  
Craig J. Beasley  
A Synthetic Simultaneous Source Wide-Azimuth Acquisition Study Over A Complex Marine Environment ...................................... 57  
Constantine Tsingas, Shoudong Huo, Gary Lorentz, Mingxing Wang, Michael Jervis, James Musser, Panos Kelamis  
An Inversion Approach to Separating Sources in Marine Simultaneous Shooting Acquisition ................................ 60  
Roald Van Borselen, Rolf Baardman, Bedanta Goswami, Eivind Fromyr  
Compressive Sensing in Marine Acquisition and Beyond ............................................................................................... 64  
Felix J. Herrmann, Haneet Wason
Seismic Full-Waveform Inversion Using a Source-Receiver Compression Scheme ........................................... 67
Aria Abubakar, Tarek M. Habashy, Guangdong Pan

A Land Example of Full Waveform Inversion and Distance Separated Simultaneous Sweeping ......................... 70
R-E. Plessix, G. Baeten, J. W. De Maag, F. Ten Kroode, R. J. Zhang

Multisource Least-Squares Migration of Marine Streamer Data with Frequency-Division Encoding .................. 75
Yousong Huang, Gerard T. Schuster

On the Relation Between Seismic Interferometry and the Simultaneous-Source Method ................................. 80
Kees Wapenaar, Joost Van Der Neut, Jan Thorbecke

Blended Acquisition with Optimized Dispersed Source Arrays ................................................................. 84
Guas Berkhour, Gerrit Blacquière

Analysis of a Coherency-Constrained Inversion for the Separation of Blended Data: Discovering the Leakage Subspace .................................................................................................................. 86
Panagiotis Doudgeris, Kenneth Bube, Gary Hampson, Gerrit Blacquière

Separation of Multiple Interfering Sources in Wireless Communications from a Geophysical Perspective................................. 88
U. Spagnolini

Submarine Slope Instabilities – Key Questions and Natural Field Laboratories .................................................. 90
Maarten Vanneste

Seismic Characterization of Landslides and the Emergence of Seismic Monitoring ........................................... 95
Stéphane Garambois, Denis Jongmans, Agnès Helmstetter

Geotechnical Characterisation of Submarine Slope Movements, Example from the Area Off the Nice Airport (SE France). ................................................................. 100
Sébastien Garziglia, Nabil Sultan

Electrical Imaging for Landslide Monitoring: State-of-the-Art and Future Challenges ...................................... 105
Vincenzo Lapenna, Angela Perrone, Sabatino Piscitelli

Marine Drilling/Construction Hazard Site Investigations - Current Practices and Techniques in the Oil E&P Industry ................................................................. 110
Palle J. Jensen

The Role of Sediment Composition in the Flow Behaviour of Submarine Landslides ........................................ 113
Dieter Issler

Assessment of Unstable Slopes in Mountain Regions Using Geophysical Methods ........................................... 114
Hansruedi Maurer, Christian Hauck, Thomas Spillmann

Seismic Full-Waveform Inversion and Data Fusion on Clayey Landslides ......................................................... 119
Gilles Grandjean, Anouard Romdhane, Adnand Bitri

Characterization of Clayey Landslides Using Multidisciplinary and Multiscale Dataset .................................... 124
Grégory Bièvre, Denis Jongmans

Quantifying the Effect of Fluids and Mechanical Weakening of Fractures and the Implications for the Rupture of Large Landslides ................................................................. 129
Benoit Derode, Frédéric Cappa, Yves Guégelmi

Geophysical and Geotechnical Investigation of a Complex Offshore Foundation Ground Affected by Glacial/Postglacial Sedimentation Processes (German North Sea) ............................................................. 134
Wenfang Fan, Hanno Keil, Stefan Kreiter, Volkhart Spieß, Daniel Hepp, Tobias Mörz

Monitoring the Åknes Rock Instability, Norway ................................................................................................. 139
Lene Kristensen, Lars Harald Blikra

A Monitoring System for Time-Lapse Electrical Resistivity Tomography (ERT) and Time Domain Reflectometry (TDR) Measurements ................................................................. 144
Raffaele Luongo, Angela Perrone, Sabatino Piscitelli, Antonio Satriani, Antonio Loperte

Geophysical Characterization of the Furggwanghorn Rock Glacier, Switzerland ............................................... 149
Kaspár Merz, Lasse Rabenstein, Thomas Buchli, Hansruedi Maurer

Quick-Clay Landslide-Prone Grounds in Norway and Sweden: A Complex Problem Requiring a Combined Geophysical and Geotechnical Approach ................................................................. 154
Guillaume Sauvin, Isabelle Lecomte, Sara Bazin, Jean-Sébastien L’Heureux, Alireza Malehmir

A Multidisciplinary Study of Near-Shore Landslides in the Trondheim Harbour, Mid Norway ............................... 159
Jean-Sébastien L’Heureux, Louise Hansen, Oddvar Longva, Guillaume Sauvin, Maarten Vanneste

Ray Based Approaches for Velocity Model Building: Past Present and Future .................................................. 164
Gilles Lambaré

Waveform Inversion Overview: Where Are We? and What Are the Challenges .................................................. 166
R-E. Plessix

Objective Functions for Full Waveform Inversion ............................................................................................... 172
William Symes

Challenges and Value of Applying FWI to Depth Imaging Projects ....................................................................... 174
Laurent Sirgue, Bertrand Denel, Fuchun Gao
A Study of Geomechanical Effects on Time-Lapse Seismics................................................................. 233
G. Cassiani, A. Brovelli, G. Vignoli, B. Plischke

Drilling in Depleted Fields – From Surprises to Surprises?................................................................. 237
F. J. Santarelli, F. Sanfilippo

Workflow for Coupled Geomechanical and Reservoir Problems – Recent Experiences.................. 239
A. (Tony) Settari

Solutions for 3D Coupled Geomechanical and HF Modelling in UG Reservoirs............................... 243
V. De Gemmaro

Microseismic Geomechanics – Complexity Simplified ................................................................. 245
Alexander Drozginine, Joel Iia, Steve Oates

An Acquisition System Using Complementary Components to Achieve Robust Broadband Seismic........ 247
Stian Hegna, Gregg Parkes

Deep Interpolated Streamer Coverage - Broadband Seismic Data Offshore South Africa.................. 249
Stephen McHugo, Andrew Dippenaar, John Bacon, Shona Joyce, Roger Dowdney

What to Expect from Variable-Depth Streamer Data .................................................................. 252
Dechun Lin, Yves Lafet, Ronan Sablon

Increasing Spatial and Temporal Bandwidth with Multi-Component Streamer Data.......................... 255

Increased Temporal Bandwidth Using Hydrophone Only Recording and Conventional Airgun Arrays – Why Not?................................................................. 257
R. Gareth Williams

Analysis of a Broadband Processing Technology Applicable to Conventional Streamer Data................. 259
Zhengzheng Zhou, Milos Cvetkovic, Bing Xu, Philip Fontana

Preparing Data for Full Waveform Inversion: A Workflow for Free-Surface Multiple Attenuation......... 261
Jyoti Kumar, Adriana C. Ramirez, Suhail Butt

Delivering Technical Limit Seismic Data: ‘Nature’ vs. ‘Nurture’......................................................... 264
Linda Hodgson, Daniel Davies, Thomas Hance, Mike Smith

Assessing Frequency Bandwidth and Resolution Enhancement of Seismic Data: A Broadband Perspective........................................................................................................................................ 266
Didier Rappin, Christian Deplante, Thierry Cadoret

Increasing the Reservoir Characterization Potential with Multi-Component Streamer Data.................. 267
Peter Watterson, Kurt Eggenberger, Massimiliano Vassallo, Jennifer Graham, Ian Scott, Dirk-Jan Van Manen, Dominic Lowden

HF Losses – Stripping Various Causes ................................................................................................. 269
Didier Rappin, Thierry Castex, Christophe Barnes, Kevin Sumyn

Broadband Verses Conventional Marine Seismic: The Importance of Compensating for the Earth Filter........................................................................................................................................ 272
Anthony Hardwick, Nick Woodburn, James Whittaker

Spectral Fusion: A Tool to Merge Low and High Frequency Datasets................................................. 275
Christian Deplante

Value of the Broadband Seismic for Interpreter and Reservoir Geophysics........................................ 278
Cyrille Reiser, Folke Engelmark, Euan Anderson, Tim Bird

Variable Depth Streamer – Benefits for Rock Property Inversion....................................................... 280
L. Michel, Y. Lafet, R. Sablon, D. Russier, R. Hanumantha

4D Processing between Variable Depth and Conventional Streamer Data........................................ 283
P. Charrier

The Latest Sleipner CO₂ Injection Monitoring Using Dual Sensor Streamer Technology.................. 287
Ivar Sando

Inverse Methods to Combine Geology, Geostatistics and Multiphysic Data........................................ 291
Miguel Bosch

Monte Carlo Based Tomographic Full Waveform Inversion with Multiple-Point A Priori Information......... 292
Knud S. Cordua, Thomas M. Hansen, Klaus Mosegaard

Microseismic Geomechanics – Complexity Simplified......................................................................... 293
Alexander Drozginine, Joel Iia, Steve Oates

Integration of Information from Diverse Sources............................................................................... 295
Thomas Meyer Hansen, Knud S. Cordua, Klaus Mosegaard

Subsurface Analytics: Operationalizing the Original “Big Data”.............................................................. 296
Duncan Irving, Jamie Cruise

An Interdisciplinary Study of the Physico-chemical Structure of Earth's Mantle: Combining Geophysical Data Analysis with Mineralogy, Petrology and Geochemistry........................................ 301
Amir Khan
History Matching Under Uncertain Geological Scenario

Geothermal Energy in Denmark – Potential, Policy and Progress

Sedimentary Settings

Shallow Geothermal Energy in Denmark – Current Status and Trends

Geothermal Exploration – Ensuring an Optimized Utilization of Geothermal Energy in Lowenthalpy

Improved Inversion of Needle Probe Data for the Determination of Rock Thermal Properties

The Thermal Properties of the Subsurface – Key Parameters for Geothermal Energy Utilization

Porosity and Permeability Depth Trends, Examples from the Danish Upper Triassic-Upper Jurassic

Gassum Formation

Deep Saline Pre-Rhaetian Triassic Aquifers in the Hvalsøen Halfgraben, Stratigraphy, Distribution, Petrology and Petrophysical Properties with Respect to Their Geothermal Potential

Geothermal Energy Production Assessment from Premature Reservoir Evaluation

3D Modelling of Geothermal Reservoir Temperatures in Denmark

Risking Seismic Amplitude Anomaly Prospects Calibrated to an Industry-Wide Database

Bayesian Risk Modification for Seismic Anomalies and Multiple Segment Prospects

Seismic Rock Physics, Sherlock Holmes and DHI Risking

Amplitude Preserving Prestack Depth Migration

Fast Amplitude Analysis from Geo-Model Horizons

Use of Quality and Anomaly Indicators in the QC of Seismic Inversion

Tricky DHIs for a Successful Exploration History in West Africa Deep Offshore

Development and Utilization of an S-Wave Type Land Streamer for High-Resolution Reflection

Shear Wave Reflection Seismic by Combining Vibratory Sources and Land Streamer Receiver Setups

Is the Vila Franca De Xira Fault Still Active? A Shallow Seismic Reflection Shear-Wave Study in an Intraplate Environment

Integrating High-Resolution Shear Wave Seismites and Outcrop Data: A Case Study from Northern Germany

Seismic Reflection Surveys Using an SH-wave-type Vibrator Across Active Faults

S-Wave Reflection Profiling: Applicability and Demonstrated Use in Denmark at Site and Regional Scale

Shallow Shear Wave Reflection Seismic on Firn and Ice – Insights, Challenges, and Opportunities from a Small Scale Experiment at Colle Gnifetti

SH-wave Seismic Reflection Land Streamer Measurements to Map Very Shallow Sand Deposits
Delineation of Detailed Structure in Holocene Unconsolidated Sediments Using S-Wave Type Land Streamer.

Tomio Inazaki

Shallow Shear Wave Reflections: What Can the Amplitude Tell Us and How?

Ranajit Ghose

Near-Surface and Near-Seabed S-Waves from P-Wave Sources

J. Gaiser, R. Verm

S-Wave Velocity from P-Wave Reflection Data: The Role of Surface Waves

Laura Valentina Socco, Daniele Boiero

Dynamic Statics – Improving Seismic Image on a 3D-9C Survey

T. Galikeev

SeaSeis: A Simple Open-Source Seismic Data Processing System

Bjorn Olofsson

A Comparison of Open Source Seismic Processing Software Packages

Nick Tanushev

Parallel I/O and Computing with JavaSeis

Chuck Mosher

GêBR: A Free Seismic Processing Interface

Ricardo Biloti

BOTOSEIS: An Interactive Interface for Seismic Data Processing with Seismic Unix

German Garabito, Williams Lima, Gabriel Almeida, João C. R. Cruz

Enhancing Geophysical Data Analysis with Open-Source Software

C. Jones, J. I. Selvage, H. Macintyre

The Road to Open Source: Sharing a Ten Years Experience in Building OpendTect, the Open Source Seismic Interpretation Software

Hélène Huck

Open Mobile Geocomputing

Matt Hall

Processing and Attribute Analysis of Low-Frequency Blackfoot Data

Akshay Gulati, Marcus Wilson

Open Data Library with Open Software Scripts

Karl Schleicher

Processing of Seismic Reflection Data Using MATLAB™: A Promising Book Opening the Gateway between Geophysics & Electrical Engineering

Abdullatif A. Al-Shuhail, Wail A. Mousa

An Open-Source Real-Time Data Model and Database System for Oil and Gas Subsurface Applications

Thomas J. Lasseter

BP’s Experience with Open-Source Software and Open Datasets

Joe Dellingner

A Course in Geophysical Imaging Processing Using Seismic Un*x

John W. Stockwell Jr.

SEPlib

Robert Clapp

Frameworks for Modelling and Inversion

William W. Symes

Python for Geophysical Data Processing and Visualization

Didrik Pinte, Eric Jones, Robert Kern, Pietro Berkes

Challenges for Open Source Software Developers and Users

T. Al-Khalifah

Estimating Thermal Conductivity from Geophysical Well Logs: Selected Boreholes in Danish Sedimentary Basins

Thu Sylvester Bording, Niels Balling, Søren Bom Nielsen
