TABLE OF CONTENTS

A01 Examination of Seismolectric Observations at the Test Site Schillerslage and Laboratory ................................. 1
   J. Holzhaeuer, T. Guenther, U. Yaramanci
A02 Improving the Signal-to-noise Ratio of Surface-NMR Measurements by Reference Channel Based Noise Cancellation ............................................................................................................................... 6
   M. Mueller-Petke, U. Yaramanci
A03 Aquifer Characterisation by Magnetic Resonance Field and Laboratory Measurements ................................................. 11
   R. Dlugosch, M. Mueller-Petke, T. Gunther, U. Yaramanci
A04 Improving Surface-NMR Estimates of Nuclear-spin Relaxation (T1) ................................................................. 16
   J. Wallbrecher, M. Herrich, A. Green
A05 Experimental Design of Parallel 3D Geoelectric Measurements .............................................................................. 21
   M. Blome, H. Maurer, M. Herrich, S. Greenhalgh
A06 Zonal Cooperative Inversion of Data Sets with Partially Co-located Model Areas ...................................................... 26
   H. Paasche, J. Tronicke, P. Dietrich
A07 Geoacoustic Model for the Inversion of Seismic Profiling Data ................................................................................. 31
   K. Learer, C. Brown
A08 Determination of the Damping Ratio in the Soil from SASW Tests Using the Half-power Bandwidth Method and Arias Intensity ............................................................................................................ 36
   S. Basdar, M. Scheneveld, W. Haegeman, G. Degrande
A09 Time Wavelet Estimation during Full-waveform Inversion of Ground Penetrating Radar Data ................................. 41
   F. Belina, J. Irving, J. Ernst, K. Holliger
A10 Full-waveform Time-domain Inversion of GPR Data by Progressive Frequency-bandwidth Expansion ......................................................................................................................... 46
   G. Meles, S. Greenhalgh, A. Green, J. Kruk
A11 Stochastic Inversion of Vadose Zone Properties: Impact of Parameter Correlation on Uncertainty Estimates ......................................................................................................................... 51
   M. Scholer, J. Irving, A. Binley, K. Holliger
A12 Mixed-phase Deconvolution of Groundpenetrating Radar Data ................................................................................. 56
   C. Schmelzbach, F. Scherbaum, J. Tronicke, P. Dietrich
A13 A Global Measure for Depth of Investigation ........................................................................................................... 61
   A. Christiansen, E. Aukun
A14 Non-linear Smoothness-constrained Model Error and Resolution Estimates .............................................................. 66
   T. Kalscheuer, M. Garcia, N. Meqbel, L. Pedersen
A15 4-D Inversion of Resistivity Monitoring Data Using L1 Norm Minimization ............................................................. 71
   J. Kim, M. Yi, H. Ahn, K. Kim
A16 Methods to Reduce Banding Effects in 3-D Resistivity Inversion ............................................................................. 76
   M. Loke, T. Dahlum
A17 Aquifer Characterization by Spectral Induced Polarisation - Field and Lab Measurements ........................................... 81
   R. Holland, T. Gunther, U. Yaramanci
A18 Application of Multi-frequency Electromagnetic Induction for Monitoring of Soil-moisture Dynamics at the Hillslope Scale .................................................................................................................. 86
   P. Dietrich, D. Altdorff
A19 Introducing the Okavango Delta, Botswana, Airborne TEM Survey ........................................................................... 91
   J. Podgorski, L. Kgotlhang, T. Ngwisanyi, C. Ploug, E. Auken, W. Kinzelbach, A. Green
A20 An Automated Electrical Resistivity Tomography System to Monitor the Freshwater/saltwater Zone on a North Sea Island ............................................................................................................. 97
   M. Grinat, W. Sudekum, D. Epping, T. Grell, R. Meyer
A21 Combined Electrical Imaging and Distributed Temperature Sensing to Characterize Groundwater/surface-water Exchange ............................................................................................................. 102
   F. Day-Lewis, L. Slater, D. Stavrakianakis, R. Henderson, J. Lane
A22 A Multi-borehole 3-D ERT Monitoring System for Aquifer Characterization Using River Flood Even as a Natural Tracer ........................................................................................................ 107
   I. Coscia, S. Greenhalgh, N. Linde, A. Green, T. Gunther, J. Doetsch, T. Vogt
A23 Observation of Infiltration Processes by 3D-ERT Measurements: Results and Problems ........................................ 112
   U. Noell, T. Gunther, S. Altfelder
A24 A Saline Tracer Test Monitored with ERT to Detect Preferential Flow/transport Paths in Limestones ................................. 117
   T. Robert, D. Caterina, J. Deceuster, O. Kaufmann, F. Nguyen
A25 Very High Resolution Hard Rock Seismic Imaging for Excavation Damage Zone Characterisation ................................................................. 122
  C. Cosma, N. Enescu, E. Heikkinen

A26 Geophysical Mapping Techniques of Excavation Damage Zone for Quality Control of Drill and Blasting in Crystalline Rock ................................................................. 127
  E. Heikkinen, T. Lehtimäki, M. Silvast, P. Kantia, N. Enescu, C. Cosma

A27 Appraisal of Waveform Repeatability and Fidelity for Crosshole Seismic Monitoring of Potential Radioactive Waste Reposit ................................................................. 132
  S. Marelli, E. Manukyan, H. Maurer, A. Green, S. Greenhalgh

A28 Combined Seismic Waveform Inversion for Source Functions, Medium Parameters and Receiver Coupling Factors ................................................................. 137
  H. Maurer, S. Greenhalgh, S. Marelli, E. Manukyan, A. Green

A29 Data Fusion of Ground Penetrating Radar and Electromagnetic Induction for Reconstruction of Soil Electrical Properties ................................................................. 142
  D. Moghadas, F. Andre, E. Slob, H. Vereecken, S. Lambot

A30 Cross-gradients Joint Inversion of Time-lapse Crosshole ERT and GPR Data ................................................................. 147
  J. Doetsch, N. Linde, A. Binley

A31 Borehole GPR Fracture Imaging of a Crystalline Rock Aquifer, Stang-er-Brune, Brittany, France ................................................................. 152
  C. Dorn, N. Linde, J. Doetsch, T. Borgue, O. Bour

A32 Permeability Estimates from Poro-elastic Dispersion Analyses of Sonic Logs ................................................................. 157
  L. Baron, K. Holliger

A33 Retrieving 2D Structures from Surface Wave Data by Means of a Space-varying Spatial Windowing ................................................................. 162
  P. Bergamo, D. Boiero, L. Socco

A34 Controlled Seismic Imaging in Determining AVA Curves under Shallow Complex Structures ................................................................. 167
  J. Silva, D. Filho, M. Martins, L. Landau

A35 Stoneley Wave Modeling in Heterogeneous Porous Media with Viscous Pore Fluids ................................................................. 172
  R. Sidler, J. Carcione, K. Holliger

A36 Building 3D Exploration Models from Borehole Geophysical and Petrophysical Data ................................................................. 177
  E. Bongjum, B. Milkeriet

A37 Geophysical Imaging of Discontinuous Permafrost in Northwest Canada ................................................................. 182
  A. McClymont, L. Bentley, M. Hayashi, B. Christensen, W. Quinton

A38 Determination of Ice-thickness Using GPR at Brandner Glacier in Vorarlberg, Austria – Case Study ................................................................. 188
  I. Kreutzner, A. Freudenthaler

A39 Geophysics in Glacial-hazard Initiation Zones, Russian Caucasus ................................................................. 193

A40 Locating Bulk Water within the Tete Rousse Glacier (French Alps) Using the MRS Method ................................................................. 198
  A. Legchenko, M. Desclaires, H. Guyard, C. Vincent, S. Garambous, K. Chalikakis, M. Ezersky

B01 Combined GPR-FWD Survey to Detect Low Compaction Zones in a Harbour Area ................................................................. 203
  J. Endom

B03 Geophysical Survey of a Municipal Waste Landfill Using Electrical Resistivity and Induced Polarization Methods ................................................................. 208
  P. Halub

B04 Geophysical Assessment of Soil Volumes Polluted with Metal Elements from Long-term Waste Water Irrigation ................................................................. 213
  A. Tabbagh, J. Thiesson, R. Guerin, M. Dabas, M. Thiry, F. Oort

B06 A Hierarchic Approach for the Characterization of CO2 Permeable Pathways Using Geophysical and Geochemical Methods ................................................................. 218
  C. Schuetze, H. Lamert, U. Schneidewind, U. Werban, P. Dietrich

B07 Geophysical Assessment of Contamination from a Wastewater Treatment System in the Milltown Lake Catchment, Ireland ................................................................. 223

B08 A High Sensitivity Impulse Neutron Method for Real-time Detection of Elements and Compounds in Soil and Subsoil Water ................................................................. 228
  P. Backup, M. Backup

B09 Airborne Geophysical Survey and Innovative Landslide Monitoring at Gschleifgraben, Austria ................................................................. 230
  R. Supper, I. Baron, A. Ita, E. Winkler, B. Jochum, K. Motchka

B10 Airborne EM Mapping of Rock Slides and Tunneling Hazards ................................................................. 235
  A. Pfaffhuber, E. Grimstad, U. Domaas, E. Auker, M. Halkjær, N. Foged
B11 Mudslide-bedrock Interaction at Super-Sauze (French Alps) by UAV-based Remote Sensing and Nanoseismic Monitoring ................................................................. 240
  M. Joswig, U. Niethammer, S. Rothmund, M. Walter
B12 Tracking the Movements of Electrodes on an Active Landslide over Time Using Only Timelapse Resistivity Data ............................................................................................. 245
B13 The Use of Seismic Noise for Assessing the Potential Failure of an Overhanging Column ................................................................. 250
  C. Levy, L. Ballet, D. Jongmans
B14 Investigating a Creeping Hillslope by Layer-based Inversions of Seismic First Arrival Times ................................................................. 255
  M. Rumpf, U. Boniger, J. Tronicke
B15 Integrated Seismic 3D-processing for Tunneling ................................................................. 260
  D. Krueger, R. Groschup, T. Dickmann
B16 A New Petrophysical Model for Describing the Pressure-dependent Acoustic Velocity in Rocks ................................................................. 265
  J. Molnar, M. Dobroka
B17 Linear Spread Configuration in the MASW Method ................................................................................................. 270
  U. Dikmen, M. Arisoy, I. Akkaya
B18 Site Characterization of São Sebastião Volcanic Crater Using Geophysical Tests ................................................................................................. 275
  I. Lopes, M. Mendes, G. Deidda, C. Strobbia, J. Santos
B19 3D Cross-hole Electrical Resistivity Topography to Control the Injection of Expanding Resins: A Case History in Venice ................................................................................................. 280
  G. Morelli, F. Fischanger, D. Gualerzi, M. Occhi, G. Ranieri, G. Santarato
B20 Multi-method High Resolution Geophysical & Geotechnical Quick Clay Mapping ................................................................................................. 285
B21 Imaging of the Shallow Alpine Fault Zone (New Zealand) Using 2D and Pseudo 3D Seismic Reflection Data ................................................................................................. 290
  A. Kaiser, H. Horstmeyer, A. Green, F. Campbell, R. Langridge, A. McClymont
B22 Reflection Seismic Surveying Across the Alpine Fault Immediately North of the Intersection with the Hope Fault ................................................................................................. 295
  S. Carpentier, A. Green, H. Horstmeyer, A. Kaiser, F. Hurter, R. Langridge, M. Finnemore
B23 Geophysical Survey for Crypt Detection in the Church of Virgin St. Mary’s Birth in Horne Krkany, Slovakia ................................................................................................. 300
  J. Panisova, R. Pasteka, W. Rabbel, M. Bielik, T. Wunderlich, J. Pupco
B24 Restoration of the Historico-architectural Plan of the Voskresensky New-Jerusalem Monastery by Geophysical Methods ................................................................................................. 305
  A. Urasova, A. Ivanov, V. Monakhov, N. Pudova, M. Shirobokov
B25 Integration of Satellite Imagery, Airborne Radiometric and Regional Geochemical Data Sets for Mineral Exploration ................................................................................................. 311
  D. Eberle, H. Pausche
B26 Noise Sources for a Fixed Wing Airborne EM System, Quantified by Means of 3D Finite Element Modelling ................................................................................................. 316
  L. Rabenstein, S. Hendricks, C. Haus
B27 Validating SkyTEM Data Against Ground-based TEM Data at the Danish National Test Site by Upward Continuation ................................................................................................. 321
  N. Foged, A. Christiansen, E. Auken
B28 Airborne EM Surveys Applied to Industrial Landuse Legacy Assessments in the UK ................................................................................................. 326
  D. Beamish
B29 Determination of Ground Thermal Properties for Dimensioning Large-scale Geothermal Heat Pump Systems ................................................................................................. 331
  L. Rybach
B30 Estimation of Geothermal Reservoir Properties Using an Ensemble Kalman Filter Approach ................................................................................................. 336
  C. Vogt, C. Kosack, G. Marquart
B31 Microseismic Monitoring for Observation of Reservoir Processes - A Case study of the EGS Project Basel ................................................................................................. 341
  O. Genoni, A. Ebert, M. Haring
B32 Pedophysical Study of Electrical Properties and Water Content, Laboratory and Field Experiments ................................................................................................. 346
  T. Wunderlich, S. Hagrey, H. Petersen, W. Rabbel
B33 Influence of Pore Fluid Conductivity and Water Content on the Complex Conductivity of Peat ................................................................................................. 351
  M. Ponzianni, H. Vanhala, E. Slof, D. Ngan-Tillard
B34 Bedrock Interface Detection for Sand and Gravel Mineral Reserve Assessment Using 3D ERT ................................................................................................. 356
B35 Prospecting Bauxite Horizons with GPR on Laterite Deposits at the Amazon Basin, Brazil .................................................. 361
M. Barsottelli-Botelho, J. Gouveia

B36 Effective Dynamic Permeability for Seismic Waves in Inhomogeneous, Porous Media Using White’s Patchy Saturation Model ................................................................................................................. 366
S. Greenhalgh, X. Liu, B. Zhou

B37 Extraction of Permeability Variations from PWave Velocity Dispersion Data ................................................................................................................... 371
B. Milkereit, W. Pan, B. Harris

B38 Grounded Ice-sheets and Glacial Deposits within the Aberdeen Ground Formation of the Central North Sea .......................................................................................................................... 376
F. Buckley

B39 Volumetric, Multi-fold Acoustic Interrogations of Complex Sub-seabeds .................................................................................. 381
J. Guigne, J. Welford, J. McDermott

P01 Evaluation of Properties of Morainic Soils Based on Shallow Seismic, Electrical Imaging Surveys and CPT Data .......................................................................................................................... 386
V. Lisins

P02 Robust Weighted-mean Approach for the Evaluation of Ground Improvement Columns Using Surface Wave Analysis ............................................................................................................. 392
A. Madun, I. Jefferson, K. Foo, P. Atkins, D. Chapman, M. Culshaw

P03 Difference in Resistivity Explained by Initial Stage of Weathering .......................................................................................... 397
B. Danielsen, H. Madsen

P04 Dike Monitoring at Red River by Geophysical and Geotechnical Tools .................................................................................. 402
A. Weller, M. Moller, R. Lewis, C. Tran

P05 Rock Percentage Estimation Using P-wave Tomography Method. A Case Study from Mochos, Heraklio, Greece .................................................................................................................... 407
N. Andronikidis, G. Kritikakis, C. Papathanasiou, A. Vafidis

P06 The Use of 3D-3C Seismic Refraction Method to Detect Hidden Shear Zones .......................................................... 412
R. Nikrouz

P07 Application of Surface Wave Method to Confirm Compaction of a Refurbished Embankment – Case Study .......................................................................................................................... 417
W. Chwatal, W. Lienbacher, A. Freudenthaler, W. Wu

P08 Travel-time Inversion of Parallel-seismic Data for Foundation Length Estimation ................................................................................. 422
E. Niederleithinger, J. Tronicke

P09 Time-domain IP and Resistivity Sections Measured at Four Landfills with Different Contents ........................................................................ 427
V. Leroux, T. Dahlin, H. Rosqvist

P10 Measuring In-situ Time Domain Induced Polarization Data for Landfills Delineation ........................................................................ 432
A. Legaz

P11 Integrated Geophysical Characterization of a Hydrocarbon Contaminated Site .................................................................................................................. 438

P12 Expected Discontinuous Terrain Deformation with the Microgravity Method in a Selected Area of Shallow Coal Extraction .................................................................................................................. 443
M. Loj

P13 Near Surface Geophysical Methods Applying in Arctic Shelf ........................................................................................................ 448
I. Balanyuk, A. Dmitrievsky, S. Shapovalov, O. Chaikina

P14 Geological Characterization of the Dutch Wadden Sea Using Shallow Reflection Seismics ................................................................................ 453
B. Paap, C. Dubelaar, J. Gunnink

P15 Investigation of the Bed Sediments Using a Suitable Processing Algorithm in GPR Method: A Case Study .......................................................................................................................... 458
M. Vizheh, A. Ameri, A. Rohani, F. Jafari, A. Razavi

P16 Geophysical Surveys for Delineating Salt Water Intrusion and Fresh Water Resources in the Oued Laou Coastal Aquifer ........................................................................................................ 463
M. Himi, J. Sittou, L. Rivero, A. Salhi, J. Tapias, A. Casas

P17 Airborne Electromagnetic Surveys over Concealed Glacial Aquifers, United States and Canada .................................................................................................................. 468
B. Smith, J. Abraham, S. Lundstrom

P18 Prospecting and Mapping of Aquiferous Strata in Different Mineralization by Geoelectric Methods .......................................................................................................................... 473
N. Yakymchuk, S. Levashov, I. Korchagin, D. Bozhezha, J. Pishchanovy

P19 Optimization of Electrode Layouts for 3D Resistivity Imaging: Application to Water Infiltrations in an Experimental Dike ........................................................................................................ 479
Y. Fargier, S. Palma-Lopes, D. Francois, C. Fauchard, P. Cote
P20 Effectiveness of Multielectrode Earth Resistivity Method for Characterizing Putting Greens of Golf Courses ............................................................................................................................... 484
J. Tapias, R. Lovera, M. Himi, E. Margui, I. Queralt, A. Casas
P21 Geophysical Measurements in Coastal Area of Nam Dinh Province (Vietnam) for Delineation of Aquifers ............................................................................................................................... 489
T. Nguyen, A. Weller, D. Tang
P22 Determination of Qualitative Characteristic of Aman Abad Aquifer Using Surface Geoelectrical Data ............................................................................................................................... 494
F. Arousmahalleh, M. Mirzaei, V. Adeshleh, S. Gholami
P23 Fully Coupled Hydrogeophysical Inversion of Salt Tracer Experiments Monitored by Electrical Resistivity Tomography ............................................................................................................................... 499
D. Pollock, O. Cirpka
P24 Method for Comprehensive Computing of Water Flows Geodynamics in the Dead Sea Basin ............................................................................................................................... 504
L. Eppelbaum, Y. Yakubov, M. Ezersky
P25 Spectral Induced Polarization Measurements on Sand-clay Mixtures in Dependence of Water Saturation ............................................................................................................................... 509
K. Breede, O. Esser, J. Huisman, E. Zimmermann, A. Kemna
P26 Spectral Induced Polarization: Laboratory Measurements on Saturated Sandy Quartz Samples of Varied Pore Characteristics ............................................................................................................................... 514
K. Koch, A. Kemna, K. Holliger
P27 Studies on the Origin of the IP-effect with Gelfilled Sandstone Samples ............................................................................................................................... 519
A. Hordt, S. Milde
P28 Detecting Perched Water Bodies Using Surface Seismic Time-lapse Travel-time Tomography ............................................................................................................................... 524
G. Baker, D. Gaines, S. Hubbard, D. Watson, S. Brooks
P29 New Three-component Landstreamer System Developed for Groundwater and Engineering Applications ............................................................................................................................... 529
K. Martinez, C. Ploug, A. Pugin, J. Mendoza
P30 Migration and Instantaneous Phase Combination to Detect Hidden Culverts Characteristics in GPR Data ........................................................................................................................................... 534
B. Yousefi, S. Esmaeli, S. Jazayeri
P31 An Infrared Survey on a Concrete Bridge Deck ............................................................................................................................... 539
J. Hugenschmidt
P32 Some Geophysical Characteristics of the Burning Products in Archaeological and Geological Studies ............................................................................................................................... 544
S. Itkis, B. Khesin, E. Vapnik
P33 Geophysical Researches on Excavations of the Bronze Age Fortified Settlement in Southern Ural Mountains ............................................................................................................................... 549
P. Martyshko, V. Noskewich, N. Fedorova, L. Muraviev
P34 Application of Electrical Resistivity Tomography to Detect Archaeological Structures at Tell Al Marj (Homs, Syria) ............................................................................................................................... 554
P35 Examples of Resistivity Tomography for Cultural Heritage Management ........................................................................................................................................... 559
V. Compare, M. Cazzollino, E. Giovanni, P. Mauriello
P36 Analysis and Representation of 3D GPR Data Acquired across Archaeological Sites ............................................................................................................................... 564
M. Jie-A-Looi, M. Hertrich, P. Nagy, A. Green
P37 Using Ground Penetrating Radar and Induced Polarisation to Detect a Wooden Track Way ............................................................................................................................... 569
A. Weller, A. Fettig, A. Bauerochse, M. Eidner
P38 Complex Resistivity Tomography and Spectral Induced Polarization Analysis on Laboratory Device for Soil Characterization ........................................................................................................................................... 574
E. Cardarelli, G. Donno
P39 Application of DC Resistivity and TDEM to the Study of Water Ingress in a Mined Region of South Africa ........................................................................................................................................... 579
V. Hallbauer-Zadorozhnaya, E. Chirenje, P. Nyabeze
P40 Ability of the Direct Wave Amplitude of Groundpenetrating Radar for Assessing the Moisture Content Variation of Timber ........................................................................................................................................... 583
I. Rodriguez-Abad, R. Martinez-Sala, F. Garcia-Garcia, R. Capuz-Lladro
P41 Bedrock Detection from an Integrated Procedure of Refraction Analysis and Tomographic Inversion of the First Arrivals ........................................................................................................................................... 588
G. Boehm, R. Frances, M. Giorgi
P42 Full Wave Form Time-domain IP Data Acquisition ........................................................................................................................................... 593
T. Dahlin, V. Leroux
P43 1D Laterally Constrained Inversion of Towedarray Capacitive Resistivity Imaging Data ................................................................. 598
  O. Kuras, A. Christiansen, D. Beamish, R. Ogilvy
P44 Selecting Electrical Resistivity Tomography Arrays to Define Geological Structures Aimed by Relative-sensitivity Matrix ................................................................. 603
  A. Guina, M. Himi, L. Rivero, E. Playa
P45 Accurate and Robust Evaluation of Singular Boundary Element Integrals for Computing 3D Radiomagnetotelluric Fields ................................................................. 608
  Z. Ren, T. Kalscheuer, H. Maurer
P46 Enhancing the Resolution Power of Least Squares Inversion Results of 2-D Magnetotelluric Data ................................................................. 613
  M. Jamié, B. Oskooi
P47 Incorporation of a 3-D lossy (conductive) Earth into Surface NMR Tomography ............................................................................. 618
  J. Lehmann-Horn, M. Hertrich
P48 2-D Resistivity Imaging for the Crooked Survey Line on the Tough 3-D Topography ............................................................................. 623
  M. Yi, J. Kim, C. Kim, J. Son, P. Tsourelas
P49 Frequency Soundings at Low Induction Numbers: Transformation and 1D Inversion Comparing to 2D ERT Inversion ............................................................................. 628
  E. Balkov, Y. Karin
P50 Related Interrelations Between Filtration and Electric Parameters of Rocks ............................................................................. 633
  S. Kozak
P51 Sensitivity of Experimental Dynamic Stiffness of the Vibrator-Earth System ............................................................................. 638
  F. Georgiades, P. Schultz
P52 Investigations on Kinematic Refraction Inversion at Different Geological Models ............................................................................. 643
  A. Paripas, T. Ormos
P53 2D Quantitative Imaging by Elastic Full Waveform Inversion: Application to a Physical Scale Model ............................................................................. 648
  F. Bretaudeau, D. Leparoux, B. Rousset, P. Operto, O. Abraham
P54 Estimation of the Depth and Shape of Intrusive Bodies by 3D Inversion of Ground Magnetic Data ............................................................................. 653
  B. Yousefi, B. Oskooi
P55 Some Applicability Problems of Euler Deconvolution to the Interpretation of the Results of Microgravity Survey ............................................................................. 658
  S. Porzucek
P56 Linearized Electrical Impedance Tomography ............................................................................. 663
  N. Polydorides
P57 Petrophysical and Electrical Study of Soil Properties in Sinaloa, Mexico ............................................................................. 668
  V. Shevlin, H. Peinado, O. Delgado, A. Ryjov
P58 Seismic Survey for Characterization of Shallow Depth Materials of Bam City, S.W. Iran ............................................................................. 673
  M. Riahi, S. Tabatabaei
P59 Sensitivity of Electrical Properties to Soil Compaction - Case Study ............................................................................. 678
  H. Petersen, W. Raabbe, B. Horn, L. Volk
P60 Velocity and Attenuation Dispersion Relations for the Effective Biot Double Porosity Model: Total Field Formulation ............................................................................. 683
  S. Greenhalgh, X. Liu, B. Zhou
P61 Seismic Monitoring of a Simulated Radioactive Waste Repository During Water Saturation ............................................................................. 688
  E. Manukyan, S. Marelli, H. Maurer, A. Green, S. Greenhalgh
P62 Vertical Shaft Pilot Hole Investigations in Preassessment of Orientation, Transmissivity and Continuity of Fractures ............................................................................. 693
  E. Heikkinen, T. Ahokas, P. Rouhianen, T. Pere
P64 Airborne Electromagnetic Survey of the Groundwater Mineralisation in the Potash Mining District of The Werra River, GER ............................................................................. 698
P65 Improving the Understanding of Sub Lagoon Hydrogeology with AEM: The Venice Lagoon Example ............................................................................. 703
  A. Viezzoli
P67 Optimizing an Existing Inversion Code ............................................................................. 708
  C. Kirkegaard, E. Auken
P68 Seismic Dispersion Analysis Feasibility for the Subgrade Investigation: Measurement, Experimental and Numerical Modeling ............................................................................. 713
  D. Leparoux, L. Laguerre, F. Treyssede, P. Cote, V. Ferber
P69 Static Correction Determination Based on Delay Time Inversion ............................................................................. 718
  T. Muhammad, H. Perroud, D. Rousset
P70 Application of Mobile Geophysical Methods for the Examination of Areas of Landslide Processes Formation and Development.........................................................................................................................723
  S. Levashov, N. Yakymchuk, I. Korochagin, Y. Pischanyi, D. Bozhezha
P71 3D GPR Measurements for Fractures Detection in Selected Post-mining Regions in Poland ...........................................728
  T. Golebiowski
P72 Investigation of Near-surface Anomalies Using the Refraction Seismic Method ...............................................................................................................................733
  T. Engelsfeld, F. Sumanovac, V. Kretic, N. Pavin
P73 Joint Inversion of Seismic Refraction and Electrical Resistivity Tomography to Investigate Sinkholes ........................................................................................................................................738
  B. Gebregziabher, T. Gunther, H. Wiederhold
P74 Geophysical Prediction and Following Analysis of the Dead Sea Sinkhole Development Through the Ein Gedi - Arugot Area ..................................................................................................................743
  M. Ezersky, L. Eppelbaum, B. Medvedev
SAGEEP1 Borehole Geophysical Investigation: Seminoe Dam, WY Characterization of Internal Fracturing and Dynamic Moduli Reduction of Mass Concrete Undergoing AAR .................................................................748
  S. Swaim
SAGEEP2 AEM Data For Assessing Irrigation Channel Leakage - A Meritorious Approach in an Australian Setting? ...............................................................................................................................................755
  T. Munday, A. Hatch, A. Fitzpatrick, D. Allen
SAGEEP3 Investigating the Effect of Bioeclogging on Electrical and Flow and Transport Properties of Porous Media ................................................................................................................................765
  G. AbdelAal, E. Atekwana
SAGEEP4 Update on Recent Observations in Multicomponent Seismic Reflection Profiling ...............................................................................................................................................773
  A. Pugin, S. Pullan, J. Hunter
