# TABLE OF CONTENTS

**VOLUME 1**

**AGIFORS CREW MANAGEMENT: CREW EFFICIENCY THROUGH COORDINATED OPERATIONS**

The Impact of Itinerary Changes on Crew Productivity ................................................................. 1  
Bruno Fernandes  
How to Set Up a Strategic and Flexible Crew Forecasting System? ......................................... 6  
Damien Chaveau, Tristan Thiebaut  
JetBlue & 2e Systems: JetBlue Automated Crew Notifications During Normal and Irregular Operations ........................................................................................................... 19  
David Fuller  
Improved Long-Term Pilot Manpower Planning at United ......................................................... 31  
David Kraay  
Mobile Technology at Delta Airlines .......................................................................................... 38  
Ed Gaitan, Brian Moreau  
Management of Holidays Entitlement and Automatic Assignment for Crew Members .............. 44  
Edgar Wiemann  
Reports, Requests and Optimization at Condor/Condor Berlin Integration .................................. 54  
Helmuth Eggeling  
Inferring Crew Preferences .......................................................................................................... 72  
John Corry  
Interacting with Real-time System Wide Information .................................................................. 83  
John Corry  
The Joy of Good Design: Developing a Purser Mobile Device ..................................................... 109  
Klaus-Peter Weidmann, Julie Ingleson  
Flexible Crew Management Systems - GemEcht & Claws: Two Practical Steps Toward Flexibility ................................................................. 114  
Luc Freget  
Crew Roster Simulation, Establishment, Optimisation and Benchmarking .................................. 128  
Niklaus Eggenberg  
AOCC Controller acquisition and Training Evaluator ................................................................. 145  
Peter Bruce  
Bridging the Gap .......................................................................................................................... 159  
Robert Gerbracht  
Harmonizing Sleep Predictions with Empirical Sleep Measurements ......................................... 173  
Steven R. Hursh  
Breaking Down Silos in Crew & Fleet Management .................................................................. 186  
Tomas Gustafsson, Mattias Lindqvist  
A Closed Loop Design for Science Guided Crew Scheduling Releasing Efficiency .................. 202  
Tomas Klemets  
Crew Summaries: Bridge between Crew Tracking System and Crew Management System ........ 226  
Xianchang Wang

**AGIFORS AIRLINE OPERATIONS: EFFICIENCY THROUGH COORDINATED OPERATIONS**

AOCC Controller Acquisition and Training Evaluator ................................................................. 237  
Peter Bruce  
Predicting Passenger Loads Within the Airport Terminal .......................................................... 251  
John-Paul Clarke  
Runway Assignments that Minimize Terminal Airspace and Airport Surface Emissions ............. 269  
John-Paul Clarke  
Collaborative Decision through Mobile Visualisation .................................................................. 282  
John Corry  
Fuel Conservation Through Flight Data Analysis Experience from a Clean Sky Project ............... 321  
Alexandre Feray
The Impact of Itinerary Changes on Crew Productivity .......................................................... 331
Bruno Fernandes

NetStar Aircraft Recovery Optimization ............................................................... 335
Michael Fluck, Sebastian Brand, Ulrich Dorndorf

Breaking Down Silos in Crew & Fleet Management .................................................. 344
Tomas Gustafsson, Mattias Lindqvist

Optimizing Aircraft Assignment to Save Fuel and Improve Operational Stability .... 360
David Karlberg

Improved Long-Term Pilot Manpower Planning at United ........................................ 389
David Kraay

Understanding Airline Performance through the Airline Benchmark Rating ............... 396
Ryan Leick

The Reliability of Weather Forecasts and Its Impact on Costly Fuel Burn .................. 408
Jane Ma, Tuell Green

Tarmac Rule: Three Years Later - Assessing the Impact and Implications for the EU .... 416
Joshua Marks

US Airways: Recovery Planning During Major Disruption Events .......................... 424
Billibaldo Martinez, Hakan Ergan

Hub Disruption Management at American Airlines .................................................... 432
Tim Niznik

An Integrated Aircraft Maintenance Routing and Work Packaging Model .................... 446
Nima Safaei

Solving the Runway Pre-departure Sequence Optimization Problem in Real Life .......... 456
Gregoire Spiers

SocialConnex - Social Media Integration in Airline Operations Control ..................... 470
Daniel Stecher

GADCom MIAM Trial: Bringing Up-To-Date Weather Information onto an EFB ........... 487
Jeff Stone

Improving Required Time of Arrival Functionality in the Presence of Uncertainty ...... 494
Clayton Tino, John-Paul Clarke

AGIFORS: REVENUE MANAGEMENT & CARGO

Estimating a Model of Passenger Choice Using Grouped Data and Least Squares Regression .................................................. 503
Emmanuel Carrier, Larry Weatherford

Revenue Trade-offs in Cabin Re-configuration ............................................................ 516
Tassio Carvalho

AGIFORS: Schedulers vs. Revenue Managers ............................................................. 527
Don Casey

Unconstrained and Constrained Pricing and Assortment Optimization under the Logit and Nested Logit Models .............................................................. 543
Guillermo Gallego, J. Davis, H. Topaloglu

Estimation Methods for Choice-Based Revenue Management Models with Censored Data .......................................................... 605
Laurie Garrow

Investigating Airline Customers' Premium Coach Seat Purchases and Implications for Optimal Pricing ................................................................................................. 633
Laurie Garrow, Stacey Mumbower, Jeffrey Newman

Measuring RM Benefit in a Real World ......................................................................... 646
Sunny Ja

Revenue Management in Volatile Environments: Lessons from the Field .................. 666
Himanshu Jain

From Uncertainties to Risks in Revenue Management ................................................. 685
Daniel Kadatz, Catherine Cleophas

A Next Generation Approach to Estimating Customer Demand via Willingness to Pay 706
Edward Kambour

A Statistical Process Control Approach to Forecast Management ............................ 724
John Lancaster
VOLUME 2

Multiple Cabin Optimization with Passenger Choice in a Competitive Environment .......................................................... 739
Pierre-Olivier Lepage, Peter Belobaba

Holiday & Special Event (HSE) Spotter ........................................................................................................................................... 757
Octavian Oancea, Praveen Bala

PNR SHOW-UP Forecast ................................................................................................................................................................. 763
Bill Pan

Applied O&D Revenue Opportunity Modeling for Dependent Demands ...................................................................................... 774
Richard Ratliff, Josephine Manjot, Bhaskara Rao Gunthreddy

The Pitfalls of RM and How to Overcome Them .......................................................................................................................... 794
Joel Singer

Development of RM Algorithms for Fare Families ......................................................................................................................... 824
Vinnie Surges, Peter Belobaba

Approximate DP in Network Revenue Management ...................................................................................................................... 840
Kalyan Talluri

How the Right Data Foundation Exposes Competitor Insights .................................................................................................. 860
Chris Buckingham

Big-Data Analytics Applied to Revenue Management: Unified Information and Analytics for Aviation ........................................ 870
Tulinda Larsen

EM/PD Timeframe Unconstraining with Hybrid Forecasting/Fare Adjustment in PODS Network U1 ...................................................... 881
Larry Weatherford

A Dynamic Disaggregation Approach to Approximate Linear Programs for Network Revenue Management ........................................ 898
Dan Zhang, Thomas Vossen

AGIFORS: SCHEDULING AND STRATEGIC PLANNING

A Modeling Framework for Flight Schedule Planning .................................................................................................................. 930
Ahmed Abdelghany, Khaled Abdelghany

Demand-Oriented Integrated Scheduling for Point-to-Point Carriers .......................................................................................... 957
Oliver Faust

Data Visualization for Scheduling at American Airlines ................................................................................................................ 980
Gelogullari Cumhur, Sunny Ja

The Enduring Premium: Long-Term Outlook for Premium Cabin Traffic .......................................................................................... 1006
Austin Horowitz

Implementations of Clean Sheet Scheduling ................................................................................................................................. 1021
Tore Jenner

Market Data Adjustment Model .......................................................................................................................................................... 1029
Gizem Keysan, Anurag Verma, Eswar Sivaraman

Attractiveness-Based Network Models ......................................................................................................................................... 1045
Diego Klabjan, Desmond Wang, Sergey Shebalov

Incorporating Gate Operations into Schedule Planning ................................................................................................................ 1063
Joshua Marks

Forecast Accuracy – Monetary Impact .................................................................................................................................................. 1072
Aditya Padival, Sumeeth Vidyawant

Short-term Equipment Changes in a Network Environment .................................................................................................... 1086
Richard Schumacher

The Challenge of Building a Strategic Aircraft Routing Model .................................................................................................. 1096
Jeffrey Warren

AWARDS (TWO FINALISTS)

2013 Anna Valicek Award ................................................................................................................................................................. 1113
Laurie Garrow

(AWARD FINALIST) Dynamic Control of Runway Configurations and of Arrival and Departure Service Rates at JFK Airport under Stochastic Queue Conditions ................................................................................. 1116
Alexandre Jacquillat

(AWARD FINALIST) Itinerary-Based Nested Control with Upsell .................................................................................................. 1140
Bill Pan, Diego Klabjan, Fikri Karaesmen, Sergey Shebalov
SYMPOSIUM

Impacts of Revenue Management on Airline Spill ................................................................. Peter Belobaba, Michael Abramovich

Big Data Analytics @ KLM ........................................................................................................... Kevin Duijndam

A First Step Towards Integrating Pricing, Demand, and Revenue Optimization ................. Laurie Garrow

Air Travel Customer Segmentation Based on Choice Behavior ............................................ Wei Hu, Yingzi Tian, Dongkyoung Choe

The Effect of Partner Asymmetries on Partners' Performance in Strategic Airline Constellations ................................................................................................................................. Yilber Karadag

Improved Long-Term Pilot Manpower Planning at United ...................................................... David Kraay, Allen Strehler, Satyabrata Sahu, Ebru Demirkol

The Value of Incremental Capacity: Modeling Fare Variation and Its Impact on Long-term Fleet Planning Decisions ........................................................................................................... 1241

Kenny Minogue, Scott Mathews

Do Bags Fly Free? An Empirical Analysis of the Operational Implications of Airline Baggage Fees .............................................................. Mariana Nicolae, Mazhar Arkan, Vinayak Deshpande, Mark Ferguson

Solving Airline Schedule Design Problem Using Constraint Propagation ......................... Sumit Raut, V. Kumar Ganesan

Cargo Network Optimization at Air France-KLM-Martinair Cargo ........................................ 1333

Gwen Roelofs, Adnan Fiaz

Integrated Aircraft Routing, Crew Pairing, and Tail Assignment: Branch-and-Price with Many Pricing Problems .................................................................................................................. 1341

Sebastian Ruther, Natasha Boland

Models and Heuristic Algorithms for an Integrated Fleet-assignment, Aircraft-routing and Crew-pairing Problem .................................................................................................................. Juan-Jose Salazar-Gonzalez

The Airline Container Loading Problem with Pickup & Delivery and Multi Doors ................ 1391

V. Lurkin, M. Schyns

Airline Competitive Connection Building Using O&D-Specific Parameters ............................ 1435

Adam Seredynski, Tobias Grosche, Franz Rothlauf

Disruption Management: Mitigation of Airspace Congestion Impact on Airline Networks ........ 1453

Bo Vaaben
