X-RAY OPTICS AND MICROANALYSIS

Proceedings of the 21st International Congress

Campinas, Brazil 5 – 9 September 2011

EDITORS

Carlos A. Pérez
Brazilian Synchrotron Light Laboratory, São Paulo, Brazil

Angelo Malachias de Souza
Federal University of Minas Gerais, Minas Gerais, Brazil

SPONSORING ORGANIZATIONS
Brazilian Synchrotron Light Laboratory (LNLS)
National Center for Research on Energy and Materials (CNPEN)
Gleb Wataghin Institute of Physics (IFGW)
# AIP Conference Proceedings, Volume 1437
## X-Ray Optics and Microanalysis
### Proceedings of the 21st International Congress

## Table of Contents

**Preface: X-Ray Optics and Microanalysis**  
Carlos A. Pérez and Angelo Malachias de Souza  

1

**Photographs**  
3

**Committees and Sponsors**  
5

## ADVANCES IN INSTRUMENTATION, DETECTION, AND METHODOLOGY

**Ultra-high performance mirror systems for the imaging and coherence beamline I13 at the Diamond Light Source**  
U. H. Wagner, S. Alcock, G. Ludbrook, J. Wiatryzk, and C. Rau  

9

**Study of multilayer-reflected beam profiles and their coherence properties using beamlines ID19 (ESRF) and 32-ID (APS)**  

15

**Energy dispersive x-ray reflectivity applied to the study of thermal stability of self-assembled organic multilayers: Results on phosphonic acids**  
Muriel De Pauli, Carlos A. Pérez, and Angelo Malachias  

18

**A multilayer grating with a novel layer structure for a flat-field spectrograph attached to transmission electron microscopes in energy region of 2-4 keV**  

24

**Palmtop EPMA by electric battery**  
Susumu Imashuku, Akira Imanishi, and Jun Kawai  

29

**High counting rates of x-ray photon detection using APD detectors on synchrotron machines**  
E. M. Kakuno, B. A. Giacomolli, and C. R. Scorzato  

32

## APPLICATIONS OF NANO/MICRO AND SURFACE ANALYSIS TECHNIQUES IN THE FIELDS OF EARTH AND ENVIRONMENTAL SCIENCE, LIFE SCIENCE, INDUSTRY, MATERIAL SCIENCE, ARCHAEOLOGY AND PALEONTOLOGY

**Application of synchrotron radiation computed microtomography for quantification of bone microstructure in human and rat bones**  
Lieber Parreiras Nogueira, Regina Cély Barroso, André Pereira de Almeida, Delson Braz, Carlos Eduardo de Almeida, Cherley Borba de Andrade, and Giuliana Tromba  

39
Correlations of trace elements in breast human tissues: Evaluation of spatial distribution using µ-XRF
Marina Piacenti da Silva, Deisy Mara da Silva, Alfredo Ribeiro-Silva, and Martin Eduardo Poletti

Elemental concentrations in skin of patients with fibroepitelial polip using synchrotron radiation total reflection x-ray fluorescence
Júlio C. A. C. R. Soares, Marcelino J. Anjos, Catarine G. L. Canellas, and Ricardo T. Lopes

IMAGING TECHNIQUES, IMAGE PROCESSING AND CRYO-ELECTRON MICROSCOPY

Nonlinear, noniterative, single-distance phase retrieval and developmental biology
Julian Moosmann, Venera Altapova, Daniel Hänschke, Ralf Hofmann, and Tilo Baumbach

In-line x-ray phase-contrast tomography and diffraction-contrast tomography study of the ferrite-cementite microstructure in steel
Alexander Kostenko, Hemant Sharma, E. Gözde Dere, Andrew King, Wolfgang Ludwig, Wim Van Oel, S. Erik Offerman, Sjoerd Stallinga, and Lucas J. van Vliet

Characterization by TEM of kaolinite to production of polymer nanocomposites
José Costa de Macêdo Neto and Liliane Maria Ferrareso Lona

Image characterization after SEM analysis for equimolar samples of Nb2O5-YTZP
Nara Miranda Guimarães, Danieli Aparecida Pereira Reis, Carlos De Moura Neto, Francisco Piorino Neto, and João Marcos Kruszynski de Assis

SCANNING X-RAY AND PROBE MICROSCOPY
(STM, STXM, FULL FIELD MIC., AFM, MFM AND CFM)

Nanoscale imaging using a compact laser plasma EUV source
Przemysław Wachulak, Andrzej Bartnik, Henryk Fiedorowicz, Jerzy Kostecki, Roman Jarocki, Mirosław Szczurek, Anna Szczurek, Torsten Feigl, and Ladislav Piňa

STATE-OF-THE-ART MICROANALYSIS METHODS (FLUORESCENCE, TOMOGRAPHY/HOLOGRAPHY, TXRF, FIB, SEM, TEM, AND PEEM/LEEM)

Advanced STEM microanalysis of bimetallic nanoparticle catalysts
Charles E. Lyman and Paul S. Dimick

Fabrication and characterization of analyzer gratings with high aspect ratios for phase contrast imaging using a Talbot interferometer
Johannes Kenntner, Venera Altapova, Thomas Grund, Franz Josef Pantenburg, Jan Meiser, Tilo Baumbach, and Juergen Mohr

Neural induced embryoid bodies present high levels of metals detected by x-ray microfluorescence
Mariana P. Stelling, Simone C. Cardoso, Bruna S. Paulsen, and Stevens K. Rehen
Spatial distribution of elements in the spheroids by prostate tumor cells using synchrotron radiation x-ray fluorescence

Evaluation of photon irradiation treatment upon calcium content of ribs of Wistar rats using micro-XRF
  Liebert Parreiras Nogueira, Regina Cély Barroso, André Pereira de Almeida, Delson Braz, Carlos Eduardo de Almeida, Camila Salata, Cherley Borba Andrade, and Claudia Marcello da Silva 104

X-RAY OPTICS
(MONOCHROMATOR AND MULTILAYER, MICRO AND NANO FOCUSING OPTICS)

Geometric scattering in prism-array lenses for hard x-rays: Measurements, simulations and models
  Peter Nillius 111

Refractive optical elements and optical system for high energy x-ray microscopy
  M. Simon, V. Altapova, T. Baumbach, M. Kluge, A. Last, F. Marschall, J. Mohr, V. Nazmov, and H. Vogt 116

Recent development in homemade x-ray polycapillary optic and its application to topics of x-ray optics
  R. Daniel Perez 121

X-ray optics for laser-plasma sources: Applications of intense SXR and EUV radiation pulses
  Andrzej Bartnik, Henryk Fiedorowicz, Roman Jarocki, Jerzy Kostecki, Anna Szczurek, Mirosław Szczurek, Przemysław Wachulak, and Ladislav Pina 126
