NUMERICAL ANALYSIS
AND APPLIED MATHEMATICS
ICNAAM 2012

International Conference of Numerical Analysis and Applied Mathematics

Kos, Greece 19 – 25 September 2012

Volume A

EDITOR

Theodore E. Simos
European Society of Computational Methods in Sciences, Engineering, and Technology (ESCMSET),
European Academy of Sciences; European Academy of Sciences and Arts
European Academy of Arts, Sciences and Literature; King Saud University, Saudi Arabia
University of Peloponnese, Greece

CO-EDITORS

George Psihoyios
European Society of Computational Methods in Sciences, Engineering, and Technology (ESCMSET);
Fellow of the IMA; Greece

Ch. Tsitouras
Technological Educational Institute of Chalkis, Greece

Zacharias Anastassi
School of Pedagogical & Technological Education (ASPETE), Athens, Greece

All papers have been peer reviewed.

SPONSORING ORGANIZATIONS
European Society of Computational Methods in Sciences, Engineering and Technology (ESCMSET)
The R. M. Santilli Foundation
Theodore E. Simos, George Psihoyios, Ch. Tsitouras, and Zacharias Anastassi

Conference Details

European Society of Computational Methods in Sciences, Engineering and Technology (ESCMSET)

VOLUME A

INVITED PAPERS

The importance of Pappus for the development of mathematics
Gerhard Wanner

Explicit stabilized integration of stiff deterministic or stochastic problems
Assyr Abdulle

Geometric integration by playing with matrices
Luigi Brugnano and Felice Iavernaro

Stroboscopic averaging in Banach spaces: Application to NLS
F. Castella, Ph. Chartier, F. Méhats, and A. Murua

Conjugate symplectic B-series
Ernst Hairer and Christophe J. Zbinden

Foundations of Geometric Algebra computing
Dietmar Hildenbrand

Convergence of piecewise deterministic processes modeling two-scale reaction networks
Tobias Jahnke

The novel mathematics underlying hadronic mechanics for matter and antimatter
Ruggero Maria Santilli
A new approach to high-order averaging
P. Chartier, A. Murua, and J. M. Sanz-Serna 42

SYMPOSIA

Preface of the “7th symposium on numerical analysis of fluid flow and heat transfer”
Pawel Kosinski 45

Numerical investigation on heat transfer in power-law fluids with variable thermal diffusivity in the presence of viscous dissipation and radiation
Botong Li, Liancun Zheng, and Xinxin Zhang 46

Marangoni convection flow and heat transfer in pseudoplastic non-newtonian nanofluids with radiation effects and heat generation or absorption effects
Yanhai Lin, Liancun Zheng, and Xinxin Zhang 50

Numerical simulation of cavitating tube problems with isothermal model
Eric Goncalves and Jean Decaix 54

Study of compressibility effects on turbulent cavitating flows
Jean Decaix and Eric Goncalves 58

Hyperbolic systems of conservation laws for compressible multiphase flows based on thermodynamically compatible systems theory
E. Romenski 62

Heat transfer coefficient of nanofluids in minichannel heat sink
Adi T. Utomo, Ashkan I. T. Zavareh, Heiko Poth, Mohd Wahab, Mohammad Boonie, Phillip T. Robbins, and Andrzej W. Pacek 66

Numerical and experimental analysis of a flow confined by a wire screen
Herbert Obame Mve, Romuald Rullière, Rémi Goulet, and Philippe Haberschill 70

Some advances in the characterization of gas and solid mixtures under low pressure conditions

Numerical simulation on gas-cooled closely-packed solid specimens
Yuming Chen and Frederik Arbeiter 78

Lattice Boltzmann modeling of thermal explosion in dynamic mixtures
Vasily Novozhilov and Conor Byrne 82

Modeling of low-capillary number segmented flows in microchannels using OpenFOAM
D. A. Hoang, V. van Steijn, L. M. Portela, M. T. Kreutzer, and C. R. Kleijn 86
Simulation of Rayleigh-Taylor instability by Smoothed Particle Hydrodynamics: Advantages and limitations
Mostafa Safdari Shadloo and Mehmet Yildiz
90

Modelling of bubble rising by smoothed particle hydrodynamics method
N. Tofighi, A. Zainali, and M. Yildiz
95

Multi-fluid pipe flow model for analysis of wellbore dynamics
B. Krasnopolsky, A. Starostin, and A. Osiptsov
99

Representation of deformable bubbles by analytically defined shapes in an immersed boundary method
S. Schwarz and J. Fröhlich
104

Parallelization of the SIP algorithm
F. Dierich and P. A. Nikrityuk
109

Numerical simulations of the interaction between a settling particle and a rising microbubble
Henrik Ström, Ebrahim Karimi Sibaki, and Srdjan Sasic
113

Modelling isothermal bubbly-cap flows using two-group averaged bubble number density approach
S. C. P. Cheung, G. H. Yeoh, and J. Y. Tu
117

Large eddy simulation of atmospheric boundary layer over wind farms using a prescribed boundary layer approach
H. Sarlak, J. N. Sørensen, and R. Mikkelsen
121

Knowledge based system for runtime controlling of multiscale model of ion-exchange solvent extraction
Piotr Maciół, Leszek Gotfryd, and Andrzej Maciół
125

Unsteady heat transfer through a longitudinal fin: An investigation into the effects of key parameters
C. Harley
129

Velocity field around a falling particle
Zdenek Chara, Bohus Kysela, and Pavel Vlasak
133

Grooved surfaces for laminar drag reduction
J. M. Floryan and H. V. Moradi
137

Numerical modeling and parameters identification of overland and channel flows in watersheds
K. El Wassifi, A. Ouahsine, H. Smaoui, R. Khiri, and P. Sergent
141

</tbody>
</table>
An effective approach for designing circular pipes with the Colebrook-White formula
Giacomo Viccione and Vincenzo Tibullo 205

Simulating fluid-structure interaction with SPH
Giacomo Viccione, Vittorio Bovolin, and Eugenio Pugliese Carratelli 209

The energy spectrum for stochastic eddies with gamma distribution
Rukiye Kara and Mine Caglar 213

Deposition capabilities of turbulent particle-laden flow passing an obstacle using experiment and CFD
Maryam Ghaffari, Anders Vestvik, Boris Balakin, and Alex C. Hoffmann 217

Computational modeling of droplet based logic circuits
Princia Anandan, Florinda Schembri, and Maide Bucolo 220

Preface of the "Fifth symposium on recent trends in the numerical solution of differential equations"
Luigi Brugnano and Ewa Weinmüller 224

Numerical methods for nonlinear singular Volterra integral equations
Teresa Diogo and Magda Rebelo 226

The construction of well-conditioned wavelet basis based on quadratic B-splines
Dana Černá and Václav Finěk 230

Active and passive symmetrization of Runge-Kutta Lobatto IIIA methods
A. Gorgey and R. P. K Chan 234

Recent advances on the parallelization of Gauss methods
Luigi Brugnano, Felice Iavernaro, and Tiziana Susca 238

Finite difference approximation of hedging quantities in the Heston model
Karel in’t Hout 242

Numerical solution of two-dimensional integral-algebraic systems using Legendre functions
S. Nemati, P. Lima, and Y. Ordokhani 246

Generalized Adams methods for fractional differential equations
Lidia Aceto, Cecilia Magherini, and Paolo Novati 250

A non-polynomial collocation method for fractional terminal value problems
M. L. Morgado, M. Rebelo, and N. J. Ford 254

Where have all the digits gone?
Sarah E. Reimer and Manfred R. Trummer 258
Two-derivative Runge-Kutta methods for differential equations
Robert P. K. Chan, Shixiao Wang, and Angela Y. J. Tsai 262

A smooth solution to singular ODEs
G. Vainikko 267

Preface of the "9th symposium on Clifford analysis and applications"
K. Guerlebeck and W. Sproessig 271

On modified quaternionic analysis, irrotational velocity fields and new applications of the Riesz system in $\mathbb{R}^3$
Dmitry Bryukhov 275

An overview on the inverse Fueter mapping theorem
Fabrizio Colombo, Irene Sabadini, and Franciscus Sommen 279

On the structure of generalized Appell sequences of paravector valued homogeneous monogenic polynomials
C. Cruz, M. I. Falcão, and H. R. Malonek 283

Complex dilations, shearings, and rotations
Milton Ferreira 287

An explicit formula for the monogenic Szegő kernel function on 3D spheroids
S. Georgiev and J. Morais 292

Selfdual 2-forms in dimension 4 and their Fischer decomposition
Fred Brackx, Hennie De Schepper, Lukáš Krump, and Vladimír Souček 296

Exactness of the generalized Dolbeault complex for $\lambda$ Dirac operators in the stable rank
Lukáš Krump and Tomáš Salač 300

Branching of monogenic polynomials
F. Brackx, H. De Schepper, and R. Lávička 304

On a special finite element based on holomorphic functions
S. Bock, K. Gürlebeck, and D. Legatiuk 308

Pascal's triangle and other number triangles in Clifford analysis
G. Tomaz, M. I. Falcão, and H. R. Malonek 313

Geometric calculus-based postulates for the derivation and extension of the Maxwell equations
Gene E. McClellan 317
The generating function of the Clifford-Gegenbauer polynomials
Hendrik De Bie, Dixan Peña Peña, and Frank Sommen

Schur analysis in the slice hypercomplex setting
Daniel Alpay, Fabrizio Colombo, and Irene Sabadini

On motion
Bernd Schmeikal

A fifth order conformally invariant higher spin operator on the sphere
Dalibor Šmíd

Cauchy-type theorems on surfaces
F. Sommen

The Fueter theorem by representation theory
David Eelbode, Peter Van Lancker, and Vladimír Souček

Preface on the "3rd symposium on generating functions of special numbers and polynomials and their applications"
Yilmaz Simsek

A study on the Hurwitz-Lerch zeta function and some identities on the Frobenious-Euler polynomials
Veli Kurt

Remarks on the Frobenius-Euler polynomials on the umbral algebra
Rahime Dere and Yilmaz Simsek

Some identities on the second kind Bernoulli polynomials of order \( \alpha \) and second kind Euler polynomials of order \( \alpha \)
Burak Kurt

Weber functions and Weierstrass sigma function associated with Hecke operators
A. Ahmet Aygunes

Bernoulli polynomial approach to high-order linear differential-difference equations
Kübra Erdem and Salih Yalçınbaş

Some formulae for the Zagreb indices of graphs
Ismail Naci Cangul, Aysun Yurttas, Muge Togan, and Ahmet Sinan Cevik

Determining the minimal polynomial of \( \cos(2\pi/n) \) over \( \mathbb{Q} \) with Maple
Birsen Ozgur, Aysun Yurttas, and Ismail Naci Cangul
Calculation of the minimal polynomial of $2\cos(\pi/n)$ over $\mathbb{Q}$ with Maple
  Aysun Yurttas, Birsen Ozgur, and Ismail Naci Cangul 371

On Dedekind modules
  Mustafa Alkan 375

A property of convolution sum for divisor functions
  Daeyeoul Kim and Aeraan Kim 379

A method for obtaining expressions for polynomials based on a composition of generating functions
  D. V. Kruchinin and V. V. Kruchinin 383

Algebraic structures of sequences of numbers
  I-Chiau Huang 387

Analyzing special parameters over zero-divisor graphs
  Nihat Akgüneş 390

Neighborhoods of a class of analytic functions defined by using a differential equation
  Osman Altintas and Öznur Özkan 393

Some important physical properties of laminated veneer lumber (Lvl) made from oriental beech and Lombardy poplar
  Murat Kılıç 397

A study on Marangoni convection by the variational iteration method
  Onur Karaoğlu and Galip Oturanç 402

Relations between Eulerian polynomials and array polynomials
  Yılmaz Simsek 407

Preface for the "Symposium on statistics and modeling III"
  Milan Stehlík 412

Model selection for logistic regression models
  Christine Duller 414

Multivariate "pseudodistributions" as natural extensions of the multivariate normal density pattern - theory
  Jerzy K. Filus and Lidia Z. Filus 417

Multivariate “pseudodistributions” pattern - applications
  Jerzy K. Filus and Lidia Z. Filus 421
Quantitative assessment of scientific quality
Harald Heinzl and Philipp Blochinger

Möbius transformational high dimensional model representation on multi-way arrays
Evrim Korkmaz Özay

A new and easy to use method to evaluate interaction in block designs
Karl Moder

Consistency of the empirical quantization error
Klaus Pötzelberger

A note on asymptotic uniform confidence bands in a multivariate statistical deconvolution problem
Katharina Proksch, Nicolai Bissantz, and Holger Dette

Exact distributions under non-standard model assumptions
Wolf-Dieter Richter

Issues on machine learning for prediction of classes among molecular sequences of plants and animals
Milan Stehlík, Bhasker Pant, Kumud Pant, and K. R. Pardasani

On simulation of exact tests in Rayleigh and normal families
Luboš Střelec and Milan Stehlík

Preface of the “2nd symposium on computer languages, implementations and tools” -SCLIT 2012-
Zoran Budimac

Testing framework for embedded languages
Dániel Leskó and Máté Tejfel

A g++ extension for supporting nontrivial designated initializers
Hemang Mehta, S. J. Balaji, and Dharamipragada Janakiram

Language abstractions for low level optimization techniques
Gergely Dévai, Zoltán Gera, and Zoltán Kelemen

Object-file-format description language and its usage in retargetable decompilation
Jakub Křoutek and Dušan Kolář

The impact of structural source code changes on software quality
Črt Gerlec and Marjan Heričko
Classical computation with negation
Dragiša Žunić and Pierre Lescanne 474

Towards an agent-oriented programming language based on Scala
Dejan Mitrović, Mirjana Ivanović, and Zoran Budimac 478

Generalizing the extensibility of a dynamic geometry software
Đorde Herceg, Davorka Radaković, and Dejana Herceg 482

Extractor of software networks from enriched concrete syntax trees
Miloš Savić, Gordana Rakić, Zoran Budimac, and Mirjana Ivanović 486

Task-specific style verification
Norbert Pataki, Tamás Cséri, and Zalán Szügyi 490

Preface of the "Symposium on dynamical systems: A framework for robot locomotion"
Carla M. A. Pinto and Cristina P. Santos 494

Sensitivity analysis of multi-objective optimization of CPG parameters for quadruped robot locomotion
Miguel Oliveira, Cristina P. Santos, and Lino Costa 495

Reinforcement learning: Solving two case studies
Ana Filipa Duarte, Pedro Silva, and Cristina Peixoto dos Santos 499

Velocity control of a two DOF walking system
José Pontes and Cristina P. Santos 503

Design and modelling of a 3D compliant leg for Bioloid
Mafalda Couto, Cristina Santos, and José Machado 507

Quadruped robots' modular trajectories: Stability issues
Carla M. A. Pinto 511

Preface of the "Symposium on quantum field theory II"
Ralf Hofmann 516

PT quantum mechanics - Recent results
Carl M. Bender 517

Non-perturbative aspects of hadron structure in QCD
Anthony W. Thomas 522

Non-Abelian strings in supersymmetric Yang-Mills
M. Shifman 525
Non-perturbative QCD seen from the property of effective locality
T. Grandou 530

A new, analytic, non-perturbative, gauge-invariant formulation of realistic QCD
H. M. Fried, T. Grandou, Y. Gabellini, and Y.-M. Sheu 535

Classically spinning and isospinning solitons
Richard A. Battye and Mareike Haberichter 536

Pressure of the $O(N)$ model in 1 + 1 dimensions
Francesco Giacosa, Stefano Lottini, Elina Seel, and Dominik Smith 541

Applications of Yang-Mills thermodynamics
Markus Schwarz 545

Fundamental and effective Yang-Mills vertices
Ralf Hofmann 549

Preface of the "Symposium on numerical functional analysis"
Allaberen Ashyralyev 554

Approximate solutions of delay parabolic equations with the Neumann condition
Allaberen Ashyralyev and Deniz Ağırseven 555

Navier-Stokes problems with small parameters in all plane
Veli B. Shakhmurov 559

Separable convolution equations occurring in atmospheric dispersion of pollutants
Aida Sahmurova and Veli B. Shakhmurov 562

Positive solutions for second-order multi-point discrete boundary value problems
Johnny Henderson and Rodica Luca 565

Weighted Markov inequality on several intervals
Mehmet Ali Aktürk and Alexey Lukashov 568

Reidemeister torsion of Hitchin representations of $\text{PSp}_{2n}(\mathbb{R})$
Yasar Sozen 570

Stable difference schemes for the fractional Schrödinger differential equation
Betul Hicdurmaz 574

The positivity of differential operator with nonlocal boundary conditions
Nese Nalbant and Yasar Sozen 578
A first order of accuracy stable difference scheme for hyperbolic-elliptic equations
Allaberen Ashyralyev, Zeynep Ödemiş Özger, and Faruk Özger 582

The positivity of the differential operator with periodic conditions
Allaberen Ashyralyev and Fatih Sabahattin Tetikoglu 586

A second order of accuracy stable implicit difference scheme for a two-phase fluid flow model
Abdullah Said Erdogan and Ali Ugur Sazaklioglu 590

A fourth-order of accuracy difference scheme for the Bitsadze-Samarskii type nonlocal boundary value problem
Fatma Songul Ozesenli Tetikoglu 594

An approximation of stochastic telegraph equations
Allaberen Ashyralyev and Muzaffer Akat 598

Stable difference scheme for nonlocal boundary value hyperbolic problems involving multi-point and integral conditions
Necmettin Aggez 602

On the numerical solution of a two dimensional elliptic-parabolic equation
Okan Gercek and Emel Zusi 606

The structure of fractional spaces generated by the difference operator on the half plane
Sema Akturk and Yasar Sozen 611

Preface of the 2012 interdisciplinary "Symposium on complex systems"
Ali Sanayei 615

From natural philosophy to computation, and back again
S. Barry Cooper 616

Rugged landscapes and timescale distributions in complex systems
D. L. Stein and C. M. Newman 620

Virtual stability: A general complex systems principle?
Burton Voorhees 623

Influence of chaotic dynamics on the performance of evolutionary algorithms - An initial study
Roman Senkerik, Donald Davendra, Ivan Zelinka, and Zuzana Oplatkova 627

The cause of complexity in nature: An analytical and computational approach
Klaus Mainzer 631

Human systems dynamics: Toward a computational model
Glenda H. Eoyang 634
Complexity, universality and intermediate degrees
Joost J. Joosten 638

Cryodynamics can solve the energy problem by stabilizing ITER: A prediction
Otto E. Rössler, Frank Kuske, and Ali Sanayei 642

Tackling fluid tangles complexity by knot polynomials
Renzo L. Ricca 646

Mapping unstable manifolds using drifter/floats in a Southern Ocean field campaign
Emily F. Shuckburgh 650

Controlling complexity
Ivan Zelinka, Lenka Skanderova, Donald D. Davendra, Roman Senkerik, and Zuzana Oplatkova 654

Self-organization in the movement activity of social insects (Hymenoptera: Formicidae)
Felipe Marcel Neves, Marcio Roberto Pie, and Ricardo Luiz Viana 658

Stochastic oscillatory dynamics of generalized repressilators
Natalja Strelkowa and Mauricio Barahona 662

Hidden quantum Markov models with one qubit
Ben O’Neill, Tom M. Barlow, Dominik Šafránek, and Almut Beige 667

3-dimensional (orthogonal) structural complexity of time-series data using low-order moment analysis
Victor J. Law, Feidhlim T. O’Neill, and Denis P. Dowling 670

Emulating fire propagation by using cellular nonlinear networks
A. Buscarino, L. Fortuna, M. Frasca, and M. G. Xibilia 674

Graph algorithm for the simulation of the interaction between particles
Stéphane Despréaux, Roland Hildebrand, and Aude Maignan 678

Structural algorithm to reservoir reconstruction using passive seismic data (synthetic example)
Tatyana A. Smaglichenko, Igor A. Volodin, Andrei A. Lukyanitsa, Alexander V. Smaglichenko, and Maria K. Sayankina 682

Engineering applications of a dynamical state feedback chaotification method
Savaş Şahin and Cüneyt Güzeliş 686

Chaos control in a chaotic system with only one stable equilibrium point
Arturo Buscarino, Luigi Fortuna, Mattia Frasca, Lucia Valentina Gambuzza, and Thanh Viet Pham 691
Preface of the "Symposium on boundary value problems and integral equations with applications"
   Pavel Krutitskii 695

The Dirichlet problem for the diffusion equation in the exterior of non-closed Lipschitz surfaces
   P. A. Krutitskii 696

Singular perturbation of simple Steklov eigenvalues
   Serhii Gryshchuk and Massimo Lanza de Cristoforis 700

What is the complexity of weakly singular integral equations?
   Arvet Pedas and Gennadi Vainikko 704

Smoothing transformation and cubic spline collocation for weakly singular Fredholm integral equations with boundary singularities
   Arvet Pedas and Mikk Vikerpuur 708

Integral representation of voltage in half-plane conductor with crack from surface by D.C. potential difference method
   Sasamoto Akira and P. A. Krutitskii 712

On the convergence of some numerical method for a hypersingular integral equation
   Gleb V. Ryzhakov 716

The singular integral equation method in 3-D boundary value problems and its applications
   A. V. Setukha 720

Efficient vortex method for numerical solution of boundary value problems in aerodynamics
   Andrey Aparinov 724

Wave wall type solution for liquid surface waves
   Anton I. Popov 728

Preface of the "Symposium on recent advances and current research on the difference equations and its applications"
   Seifedine Kadry 732

Solutions behavior of the system of rational difference equations $x_{n+1} = a/x_n + y_n$, $y_{n+1} = by_n/x_n$
   Seifedine Kadry and Chibli Joumaa 733

A simple condition for uniqueness of the absolutely continuous ergodic measure and its application to economic models
   Kenji Sato and Makoto Yano 737

A BiCGStab2 variant of the IDR(s) method for solving linear equations
   Kuniyoshi Abe and Gerard L. G. Sleijpen 741

Distance measures for image segmentation evaluation
Fernando C. Monteiro and Aurélio C. Campilho 794

Optic disc detection using ant colony optimization
Marcy A. Dias and Fernando C. Monteiro 798

Image segmentation by graph partitioning
Ana Sofia Torres and Fernando C. Monteiro 802

Numerical approximation of a nonlinear delay-advance functional differential equation by a finite element method
M. F. Teodoro 806

Solving systems of inequalities and equalities by a nonmonotone hybrid tabu search method
Gisela C. V. Ramadas and Edite M. G. P. Fernandes 810

Mathematical model for the assessment of fracture risk associated with osteoporosis
Jairson Dinis, Ana I. Pereira, and Elza M. Fonseca 814

Optimization methods for hyper-redundant robots’ inverse kinematics in biomedical applications
Mario Sáenz Espinoza, Ana I. Pereira, and José Gonçalves 818

System identification as an application of optimization
Ana S. R. Brasio, Andrey Romanenko, and Natércia C. P. Fernandes 822

An adaptive penalty method for DIRECT algorithm in engineering optimization
Rita Vilaça and Ana Maria A. C. Rocha 826

Solving a signalized traffic intersection problem with an hyperbolic penalty function
Teófilo Melo, M. Teresa T. Monteiro, and João Matias 830

Preface of the “Symposium on multiscale methods and their application to the problems arising in complex system’s modeling”
Eugene B. Postnikov 834

Sharp-interface models for concrete carbonation
Jonathan D. Evans and Andrea Fernández 835

Heterogeneous multiscale methods for penalty methods in multibody dynamics
Markus A. Kettmann and Martin Arnold 839

Preface of the Symposium "Distance functions and mathematical models in Computer Science"
Salvador Romaguera 843
The bicompletion of intuitionistic fuzzy quasi-metric spaces
Francisco Castro-Company and Pedro Tirado
844

Some classes of t-norms and fuzzy metric spaces
Francisco Castro-Company and Pedro Tirado
848

MOQA min-max heapify: A randomness preserving algorithm
Ang Gao, Aoife Hennessy, and Michel Schellekens
852

Partial quasi-metric completeness and Caristi’s type mappings
Josefa Marín
856

Submetrizable Yoneda complete structures for a metric dcpo
Josefa Marín and Salvador Romaguera
860

A note on the Hausdorff KM-fuzzy metric
Sergio Macario and Manuel Sanchis
864

A quantitative model for the upper and lower Hausdorff distances of a metric space
Salvador Romaguera
868

Preface of the “Symposium on advanced computation and information in natural and applied sciences”
Claus-Peter Rückemann
872

Supercomputing resources empowering superstack with interactive and integrated systems
Claus-Peter Rückemann
873

Preface of the first symposium on computer science and applied mathematics (CSAM 2012)
Chenglian Liu and Shuliang Sun
877

Reducing the optimisation effort in batch mosaicing
Armagan Elibol, Nuno Gracia, and Rafael Garcia
878

On the extensive unification of digital-to-analog converters and kernels
Yanchu Liao
882

On the study of voice-over-IP
Jinci Li
886

A study of decisive factors in cross-national acquisitions - An example of BenQ and Foxconn cooperation
Kai-Jan Tu
890

Preface of the "Symposium on allelopathic phytoplankton model with stochastic perturbation"
Syed Abbas

Luis Mateus, Nico Stollenwerk, and Jean Claude Zambrini 1327

Evolution of N-species Kimura/voter models towards criticality, a surrogate for general models of accidental pathogens
Peyman Ghaffari and Nico Stollenwerk 1331

Landmark-based image registration using Gneiting's compactly supported functions
Roberto Cavoretto and Alessandra De Rossi 1335

Applications of fractional calculus to epidemiological models
Urszula Skwara, José Martins, Peyman Ghaffari, Maira Aguiar, João Boto, and Nico Stollenwerk 1339

A viability analysis for a stock/price model
Chakib Jerry and Nadia Raissi 1343

Preface of the “Mini symposium on symmetry methods and applications for differential equations”
Maria Luz Gandarias, Maria Santos Bruzón, Mariano Torrisi, and Rita Tracinà 1350

Symmetry properties and reduction procedures for ODE's
Giampaolo Cicogna 1352

Classical Lie point symmetry analysis and exact solutions for the two-dimensional fin problem
Raseelo Joel Moitsheki 1354

Nonlinear self-adjointness of a class of generalized diffusion equations
Rita Tracinà 1358

Symmetries and nonlinear self-adjointness for a generalized fisher equation
M. L. Gandarias, M. S. Bruzón, and M. Rosa 1361

Symmetry reductions for a generalized Dullin-Gottwald-Holm equation
M. S. Bruzón, M. L. Gandarias, J. C. Camacho, and J. Ramírez 1365

Alternative sets of multisoliton solutions of some integrable KdV type equations via direct methods
Georgy I. Burde 1369
On a model for *Aedes Aegypti*
I. L. Freire and M. Torrisi 1373

Preface of the “Symposium on the numerical solution of differential equations and their applications”
Z. Anastassi, Z. Kalogiratou, and Th. Monovasilis 1377

Adaptive solution of the biharmonic problem with shortly supported cubic spline-wavelets
Dana Černá and Václav Finěk 1379

Stability analysis for spatial attrition with n forces
Eduardo González and Marcelo J. Villena 1383

Diagonally implicit symplectic Runge-Kutta methods with special properties
Z. Kalogiratou, Th. Monovasilis, and T. E. Simos 1387

Multi-dimensional linear stability analysis of S-ROCK methods for Itô stochastic differential equations
Yoshio Komori and Kevin Burrage 1391

Exponentially fitted symplectic Runge-Kutta-Nyström methods
Th. Monovasilis, Z. Kalogiratou, and T. E. Simos 1395

A Runge-Kutta method with zero phase-lag and derivatives for the numerical solution of orbital problems
D. F. Papadopoulos and T. E. Simos 1399

Spectral method for pricing options in illiquid markets
Edson Pindza and Kailash C. Patidar 1403

Deriving numerical techniques with zero phase-lag and derivatives for initial value problems of second order
D. F. Papadopoulos, O. T. Kosmas, and T. E. Simos 1407

Preface of the "Symposium on fractional calculus and applications"
Manuel D. Ortigueira 1411

Difference fractional linear initial value problems
Dorota Mozyrska 1412

Two-sided discrete fractional derivatives and systems
Manuel D. Ortigueira 1416
Preface of the "Symposium on dynamics of complex systems & networks: Modelling, computational analysis and control"
  Constantinos I. Siettos 1420

Stopping times in cessation flows of Bingham plastics with slip at the wall
  Maria Philippou, Yiolanda Damianou, George Kaoullas, and Georgios C. Georgiou 1422

Low k-shells identify bridge elements critical to disease flow in small-world networks
  A. I. Reppas and G. Lawyer 1426

Systematic bifurcation analysis of a planar diffusion flame model with radiative heat losses
  Michail E. Kavousanakis, Lucia Russo, Francesco Saverio Marra, and Constantinos Siettos 1430

Randomness switches the dynamics in a biophysical model for Parkinson Disease
  Konstantinos G. Spiliotis, Hari Radhakrishnan, and George C. Georgiou 1434

A computational approach for approximating center manifolds of black-box simulators
  Constantinos I. Siettos 1438

Preface of the “Symposium on linearization of control systems: New development and applications”
  Issa Amadou Tall 1442

Partial feedback linearization of control systems
  Issa Amadou Tall 1443

Feedback linearization of impulsive nonlinear control systems
  L. Menini and A. Tornambè 1447

Bilinear control systems with forced integrable filtration
  Basile Graf and Philippe Müllhaupt 1450

Local transverse feedback linearization with partial information for single-input systems
  Christopher Nielsen and Manfredi Maggiore 1454

Numerical algorithm for feedback linearizable systems
  S. S. Willson, Philippe Müllhaupt, and Dominique Bonvin 1458

Preface of the "Symposium on fractal geometry, quantization dimension and related topics"
  Mrinal K. Roychowdhury 1462

Commute times of random walks on trees
  Mokhtar Konkowa 1463

Cubic hermite and cubic spline fractal interpolation functions

Inference for the interclass correlation in familial data using small sample asymptotics
M. Fonseca, Thomas Mathew, and Roman Zmyšlony 1704

Preface of the "Symposium on BE-SMART- biometry and extremes: Statistical modelling and R techniques"
Teresa A. Oliveira 1707

A non-parametric double-bootstrap method for an adaptive MOP EVI-estimation
M. Fátima Brilhante, M. Ivette Gomes, and Dinis D. Pestana 1708

How bootstrap can help in forecasting time series with more than one seasonal pattern
Clara Cordeiro and M. Manuela Neves 1712

Two-way MANCOVA: An application to public health
M. R. Ramos, E. Carolino, T. Oliveira, and M. Bicho 1716

Joint regression analysis and AMMI model applied to oat improvement
A. Oliveira, T. A. Oliveira, and S. Mejza 1720

A statistical model for the demand of undergraduate engineering courses in Portugal: A first study of Bologna Process impact
Raquel Oliveira, A. Manuela Gonçalves, and Rosa M. Vasconcelos 1724

Tucker3 method in biometrical research: Analysis of experiments with three factors, using R
Lúcio B. de Araújo, Manuela M. Oliveira, Carlos Tadeu dos S. Dias, Amílcar Oliveira, and Teresa A. Oliveira 1728

Preface of the "1st symposium on numerical methods of boundary value problems (BVPs): Analysis, algorithms and real world applications"
Suheil A. Khoury and Ali Sayfy 1732

A fourth-order spline collocation approach for the numerical solution of a generalized system of second-order boundary-value problems
Ali Sayfy and S. Khoury 1734
A fourth-order adaptive collocation approach for the solution of generalized Emden-Fowler type equations
S. Khoury and Ali Sayfy 1739

On total variation flows with $H^{-1}$ penalty
Thomas Wunderli 1744

Longitudinally cracked orthotropic strip with hinged boundaries
Elçin Yusufoğlu and İlkem Turhan 1747

Preface of the “Symposium on numerical methods for stochastic differential equations and their applications”
Shanshan Jiang, Lijin Wang, and Jingjing Zhang 1751

Stochastic multi-symplectic wavelet collocation method for stochastic Hamiltonian Maxwell's equations
Jialin Hong and Lihai Ji 1753

Stochastic multisymplectic integrator for stochastic KdV equation
Shanshan Jiang, Lijin Wang, and Jialin Hong 1757

The third kind of generating functions of stochastic symplectic integrators
Lijin Wang and Tong Zhao 1761

A class of numerical methods with one parameter for backward stochastic differential equations
Dongsheng Xu, Peng Wang, and Xiuling Yin 1765

The well-posedness of a special partial differential equation
Jialin Hong and Xiuling Yin 1769

A new symplectic method for a linear stochastic oscillator via stochastic variational integrators
Jingjing Zhang and Lijin Wang 1772

Preface of the "Minisymposium on mathematical modeling in hydrology"
Lucio Ubertini 1776

LBM method for roughness effect in open channel flows
S. Di Francesco, G. Falcucci, C. Biscarini, and P. Manciola 1777

An entropy method for floodplain monitoring network design
E. Ridolfi, K. Yan, L. Alfonso, G. Di Baldassarre, F. Napolitano, F. Russo, and Paul D. Bates 1780

Assessment of an adjustment factor to model radar range dependent error
S. Sebastianelli, F. Russo, F. Napolitano, and L. Baldini 1784

</table>
Solving nonlinear boundary value problems using the homotopy analysis method
Mohamed A. Hajji and Fathi M. Allan 1829

On the similarity solution of nano-fluid flow over a moving flat plate using the homotopy analysis method
Fathi M. Allan and Mohamed A. Hajji 1833

On the quartet resonance of gravity waves in water of finite depth
Dali Xu, Zhiliang Lin, and Shijun Liao 1838

On the HAM-based mathematica package BVPh for coupled nonlinear ODEs
Yinlong Zhao and Shijun Liao 1842

Three-dimensional boundary-layer flow and heat transfer of a Cu-water nanofluid over a stretching surface
Hang Xu, Tao Fan, and Xiang Cheng You 1845

Application of Homotopy analysis method for mechanical model of deepwater SCR installation
Xiangcheng You and Hang Xu 1850

A study of the initial guess in Homotopy analysis method
Li Zou, Wang Zhen, Zong Zhi, and Tian Shoufu 1856

On the dispersion relation of nonlinear wave current interaction by means of the HAM
Zeng Liu, Zhiliang Lin, and Shijun Liao 1866

A homotopy analysis method for the option pricing PDE in illiquid markets
Youssef E-Khatib 1870

Preface of the "Symposium on memristor-based neuromorphic circuits and unconventional computing"
Victor Erokhin 1874

Aspects of computing with locally connected networks
V. Beiu, M. Calame, G. Cuniberti, C. Gamrat, Z. Konkoli, D. Vuillaume, G. Wendin,
and S. Yitzchaik 1875

Organic electrochemical transistors operating with electrolytes of increasing complexity for (Bio)sensing
Giuseppe Tarabella, Nicola Coppedè, Roberto Mosca, Fabio Cicoira, and Salvatore Iannotta 1880

Creating unorganised machines from memristors
Gerard Howard, Larry Bull, Ben De Lacy Costello, and Andrew Adamatzky 1884

Chains of organic memristive devices: Cross-talk of elements
Tatiana Berzina, Konstantin Gorshkov, and Victor Erokhin 1888
Towards fully analog hardware reservoir computing for speech recognition
    Anteo Smerieri, François Duport, Yvan Paquot, Marc Haelterman, Benjamin Schrauwen, and Serge Massar 1892

Memristors based on Polyaniline-Nafion interpolyelectrolyte complexes
    O. Bogomolova, J. Boeva, V. Sereyev, and D. Godovsky 1896

Observation and characterization of memristor current spikes and their application to neuromorphic computation
    Ella Gale, Ben De Lacy Costello, and Andrew Adamatzky 1898

Preface of the "Symposium on metaheuristic and numerical analysis"
    Gebrail Bekdaş and Sinan Melih Nigdeli 1902

Metaheuristic algorithms in structural dynamics: An application of tuned mass damper optimization
    Gebrail Bekdaş and Sinan Melih Nigdeli 1903

Investigation of earthquake factor for optimum tuned mass dampers
    Sinan Melih Nigdeli and Gebrail Bekdaş 1907

Dynamic absorber design for experimental two storey building model
    Hasan Omur Ozer and Nurkan Yagiz 1911

Preface of the "Symposium on the numerical analysis and applied mathematics in geodynamics"
    Bojing Zhu 1915

Laboratory experiment of the rock anelastic strain recovery compliances
    Lu Gao and Lianjie Wang 1916

Estimation of co-seismic stress change of the 2008 Wenchuan Ms8.0 earthquake
    Dongsheng Sun, Hongcai Wang, Yinsheng Ma, and Chunjing Zhou 1919

Mineral content prediction for unconventional oil and gas reservoirs based on logging data
    Tan Maojin, Zou Youlong, and Guoyue 1923

Numerical simulation and fracture identification of dual laterolog in organic shale
    Tan Maojin, Wang Peng, and Liu Qiong 1930

What is the main mechanism for the Yanshanian magmatism?
    Qiao Yanchao, Tian Ye, Guo Ziqi, and Shi Yaolin 1937

Preface of the "Symposium on helix fitting by a total least squares method"
    Norio Matsushima and Purevjav Enkhbayar 1941
HELFIT: Algorithm and applications
Purevjav Enkhbayar and Norio Matsushima
1942

Structural features of helical secondary structures and leucine-rich repeat superhelix in proteins as revealed by HELFIT analyses
Norio Matsushima and Purevjav Enkhbayar
1948

Spectrum analysis for non-uniform sampling based on least squares fitting a sinusoid
Shintaro Takastuka
1954

Preface of the "Symposium on modeling and intelligent approaches to packing problems"
Jiamin Liu
1959

Effectively handling three-dimensional spaces for container loading
Jiamin Liu, Xiaorui Zhang, Yong Yue, and Carsten Maple
1960

Preface of the "Symposium on computational methods in actuarial and financial risk evaluations"
Riccardo Gatto
1964

An importance sampling algorithm for estimating extremes of perpetuity sequences
Jeffrey F. Collamore
1966

A minimum-entropy-production criterion to compare credit risk models
Fernando Baltazar-Larios and Pablo Padilla Longoria
1970

Saddlepoint approximations to distributions and measures of risk of aggregate losses
Riccardo Gatto
1973

Measures of risk for the classical risk process using saddlepoint approximation techniques
Benjamin Baumgartner
1977

Preface of the "Third ICNAAM symposium on recent developments in Hilbert space tools and methodology for scientific computing"
Metin Demiralp
1981

Green's function to the forced Duffing equation involving nonlocal integral conditions by Green's functional concept
Kemal Özen
1982

Probabilistic evolutions in classical dynamics: Conicalization and block triangularization of Lennard-Jones systems
Burcu Tunga and Metin Demiralp
1986
Multinomialization of the classical three body problem before applying probabilistic evolution approach
Ercan Gürvit and N. A. Baykara 1990

A perturbative approach to high dimensional model representation (HDMR) under nonproduct type weight and over orthogonal geometry
Derya Bodur and Metin Demiralp 1994

Fundamental elements of vector enhanced multivariance product representation
Berfin Kalay and Metin Demiralp 1998

Probabilistic evolution approach to ODEs with Laurent series expandable descriptive functions
Zeynep Gündoğar and N. A. Baykara 2002

Fluctuation suppression to optimize initial data to increase the quality of truncation approximants in probabilistic evolution approach for ODEs: Basic philosophy
Ayla Okan, N. A. Baykara, and Metin Demiralp 2007

Unidirectional semi-analytic continuation in the probabilistic evolution approach to Van der Pol equation
Fatih Hunutlu and N. A. Baykara 2011

A new multiway array decomposition via enhanced multivariance product representation
Evrím Korkmaz Özay 2015

Space extension possibilities for probabilistic evolution with multinomial right hand side functions
Coşar Gözkürmüzî 2019

GENERAL SESSION
Approximation of solutions to an abstract Cauchy problem for a system of parabolic equations
Mohammed Al-Kadhi 2023

Robust preview control for uncertain discrete-time systems
Di Wang and Fucheng Liao 2028

Heat transfer in turbulent channel flow over protrusions
Yu Chen, Y. T. Chew, and B. C. Khoo 2032

A simple procedure for higher-order derivatives of the inverse function
M. Itskov, R. Dargazany, and K. Hörnes 2037

Computational analysis of a modified guarded hot plate experiment
Václav Koči, Jiří Maděra, Miloš Jerman, Anton Trník, and Robert Černý 2040

xliii
Exact solutions of the nonlinear ZK-MEW and the potential YTSF equations using the modified simple equation method
E. M. E. Zayed and A. H. Arnous

The functional variable method and its applications for finding the exact solutions of nonlinear PDEs in mathematical physics
E. M. E. Zayed and S. A. Hoda Ibrahim

Computational simulation of salt transport and crystallization in surface layers of building envelopes
Václav Kočí, Jiří Maděra, and Robert Černý

Trajectory classification of random motion with stochastic self-acceleration and its anomalous properties
Ihor Lubashevsky

Effect of hysteresis on moisture transport in porous building materials
Jiří Maděra, Kamil Ďurana, Jan Kočí, and Robert Černý

Lateral-torsional buckling analysis of I-beams using shell finite elements and nonlinear computation methods
Zdeněk Kala and Jiří Kala

Fuzzy stochastic analysis of serviceability and ultimate limit states of two-span pedestrian steel bridge
Zdeněk Kala and Giedrė Sandovič

The interaction of local buckling and stability loss of a thin-walled column under compression
Jiří Kala and Zdeněk Kala

Construction of difference equations from symmetries of ODEs
Toshiaki Itoh

Verification of design procedures of structural stability using probabilistic methods of reliability analysis
Abayomi Omishore

Linear programming using symmetric triangular intuitionistic fuzzy numbers
R. Parvathi and C. Malathi

A note on prediction bias for state space models with estimated parameters
Magda Monteiro and Marco Costa

Optimal homotopy perturbation method for solving a nonlinear problem in elasticity
R.-D. Ene, V. Marinca, and B. Câruntu
