## Software Quality and Testing 1

On the Use of Software Quality Standard ISO/IEC9126 in Mobile Environments .........................................................1  
*Ali Idri, Karima Moumane, and Alain Abran*

System Quality Improvement Including Software and Infrastructure Based on Software Metrics Approach .................................................................9  
*Noriko Hanakawa and Masaki Obana*

Refining the Pointer Analysis by Exploiting Constraints on the CFL-Paths .................................................................17  
*Xiaoshan Sun, Liang Cheng, Yang Zhang, Yi Deng, and Jingbiao Hou*

## Empirical Software Engineering 1

Samekana: A Browser Extension for Including Relevant Web Links in Issue Tracking System Discussion Forum ..................................................................................25  
*Denzil Correa, Sangeeta Lal, Apoorv Saini, and Ashish Sureka*
Factors Influencing Research Contributions and Researcher Interactions in Software Engineering: An Empirical Study .................................................................34
  Subhajit Datta, A.S.M. Sajeev, Santonu Sarkar, and Nishant Kumar
Can Control-Component Libraries Reduce the Costs of Developing Control Engineering-Based Self-Adaptive Systems? .........................................................42
  Tharindu Patikirikorala, Alan Colman, and Jun Han

Software Requirements Engineering 1
Packaged Software Implementation Requirements Engineering by Small Software Enterprises ...........................................................................................................50
  Issam Jebreen, Robert Wellington, and Stephen G. MacDonell
Modeling Security Threat Patterns to Derive Negative Scenarios ..................................................58
  Tatsuya Abe, Shinpei Hayashi, and Motoshi Saeki
QoS-Based Service Composition under Various QoS Requirements .........................................................67
  Gang Wang, Li Zhang, Jing Jiang, and Wei Jiang

Software Quality and Testing 2
TETRABox - A Generic White-Box Testing Framework for Model Transformations ............................................................................................................75
Facilitating Verification in Program Loops by Identification of Static Iteration Patterns ............................................................83
  Aditya Desai, Era Jain, and Subhajit Roy
Selecting Highly Efficient Sets of Subdomains for Mutation Adequacy ..................................................91
  Matthew Patrick, Rob Alexander, Manuel Oriol, and John A. Clark
A Value Weighting Method for Pair-wise Testing ...................................................................................99
  Satoshi Fujimoto, Hideharu Kojima, and Tatsuhiro Tsuchiya

Empirical Software Engineering 2
Fault-Prone Module Prediction Using a Prediction Model and Manual Inspection .................................................................106
  Norimitsu Kasai, Shuji Morisaki, and Kenichi Matsumoto
Can We Trust Our Results? A Mapping Study on Data Quality ................................................................................116
  Marshima Mohd Rosli, Ewan Tempero, and Andrew Luxton-Reilly
Evaluating Performance of Network Metrics for Bug Prediction in Software ............................................124
  Satya Prateek, Anjaneyulu Pasala, and Luis Moreno Aracena

Software Requirements Engineering 3

Software Quality Requirements: A Systematic Mapping Study .................................................231
   Sofia Ouhbi, Ali Idri, Jose Luis Fernández-Alemán, and Ambrosio Toval

Entity Disambiguation in Natural Language Text Requirements ...........................................239
   Janardan Misra and Subhabrata Das

Reasoning about Stakeholder Groups for Requirements Negotiation Based on Power Relationships .................................................................247
   Hui Yang and Peng Liang

Distributed and Parallel Software Systems

Distributed Online Test Generation for Model-Based Testing ..................................................255
   Teemu Kanstrén and Tuomas Kekkonen

On Detecting Concurrency Defects Automatically at the Design Level ...........................................263
   Frank Padberg, Luis M. Carril, Oliver Denninger, and Martin Blersch

Data-Race-Freedom of Concurrent Programs ...........................................................................272
   Granville Barnett and Shengchao Qin

Software Maintenance and Evolution

Semantic Document Adaptation with OCL Annotations ..........................................................280
   Jakub Malý and Martin Necaský

Visualization of Defect Inflow and Resolution Cycles: Before, During and After Transfer .................................................................289
   Ronald Jabangwe, Kai Petersen, and Darja Šmite

Detecting Program Changes from Edit History of Source Code .................................................299
   Ejirou Kitsu, Takayuki Omori, and Katsuhisa Maruyama

Formal Methods in Software Engineering 1

SMT-Based Bounded Model Checking for OSEK/VDX Applications ....................................307
   Haitao Zhang, Toshiaki Aoki, Hsin-Hung Lin, Min Zhang, Yuki Chiba, and Kenro Yatake

Preserving Correctness of Requirements Evolution through Refinement in Event-B .................................................................315
   Kriangkrai Traichaiyaporn and Toshiaki Aoki

A Formal Coloured Petri Net Model for Hazard Detection in Large Event Flows ....................323
   Patrice Carle, Christine Choppy, Romain Kervarc, and Ariane Piel
Product-Line Software Engineering

Handling Database Schema Variability in Software Product Lines .................................................. 331

Niloofar Khedri and Ramtin Khosravi

An Extended Orthogonal Variability Model for Metadata-Driven Multitenant Cloud Services .............................................................................................................................................. 339

Mikio Aoyama and Nozomi Kurono

Constraint Checking in Distributed Product Configuration of Multi Product Lines ........................................................................................................................................................................... 347

Gerald Holl, Paul Grünbacher, Christoph Elsner, Thomas Klambauer, and Michael Vierhauser

Formal Methods in Software Engineering 2

Harnessing SMT-Based Bounded Model Checking through Stateless Explicit-State Exploration ........................................................................................................................................................................... 355

Weiqiang Kong, Leyuan Liu, Takahiro Ando, Hirokazu Yatsu, Kenji Hisazumi, and Akira Fukuda

Towards a Hybrid Framework for Detecting Input Manipulation Vulnerabilities ........................................ 363

Sun Ding, Hee Beng Kuan Tan, Lwin Khin Shar, and Bindu Madhavi Padmanabhuni

A SystemC Semantics in Guarded Assignment Systems and Its Applications with VERDS ................................................................................................................................................................... 371

Naiju Zeng and Wenhui Zhang

Software Architecture and Design

Integrating Software Process Reuse and Automation ........................................................................... 380

Emmanuelle Rouillé, Benoît Combemale, Olivier Barais, David Touzet, and Jean-Marc Jézéquel

Safe Substitution of Components in Self-Adaptive Web Applications ................................................ 388

Shin Nakajima

Run-Time Monitoring and Real-Time Visualization of Software Architectures ........................................ 396

Ana Dragomir and Horst Lichter

Handling Multiple Mode Switch Scenarios in Component-Based Multi-mode Systems ..................................... 404

Yin Hang and Hans Hansson
Formal Methods in Software Engineering 3

Schedulability Analysis with CCSL Specifications .................................................................414
Ling Yin, Jing Liu, Zuohua Ding, Frédéric Mallet, and Robert de Simone

Linking the Semantics of BPEL Using Maude .................................................................422
Peng Liu, Huibiao Zhu, Shengchao Qin, Phillip J. Brooke, and Xi Wu

A Systematic Review of Model-Driven Security ............................................................432
Phu H. Nguyen, Jacques Klein, Yves Le Traon, and Max E. Kramer

Quality Driven Design of Program Frameworks for Intelligent Sensor Applications ..............................................................................................................................................442
Tingxun Shi, Ruizhi Wang, Daolan Zhang, Wenpin Jiao, and Bing Xie

Component-Based Software Engineering and Mobile and Cloud Systems

Automated Management of Dynamic Component Dependency for Runtime System Reconfiguration ........................................................................................................................................................................450
Ping Su, Chun Cao, Xiaoxing Ma, and Jian Lü

Service Brick Composition Framework for Smartphones ...........................................459
Shang-Pin Ma, Jheng-Shiun Jiang, and Wen-Tin Lee

An Action-Oriented Programming Model for Pervasive Computing in a Device Cloud................................................................................................................................................................467
Timo Aaltonen, Varvana Myllärniemi, Mikko Raatikainen, Niko Mäkitalo, and Jari Pääkkö

Software Engineering Environments and Tools

Extracting and Visualizing Implementation Structure of Features ...................................476
Hiroshi Kazato, Shinpei Hayashi, Tsuyoshi Oshima, Shunsuke Miyata, Takashi Hoshino, and Motoshi Saeki

Tool Integration Models .......................................................................................................485
Weiqing Zhang and Birger Møller-Pedersen

Visualizations as a Basis for Agile Software Process Improvement ................................495
Timo Lehtonen, Veli-Pekka Eloranta, Marko Leppänen, and Essi Isohanni

Scrum Anti-Patterns -- An Empirical Study .....................................................................503
Veli-Pekka Eloranta, Kai Koskimies, Tommi Mikkonen, and Jyri Vuorinen
Short Papers: Software Architecture

Strategies for Aligning Variability Model and Architecture ................................................................. 511
   Iris Groher and Rainer Weinreich

A Method for Early Detection of Mismatches between Framework Architecture
and Execution Scenarios ................................................................................................................................. 517
   Naoya Nitta, Izuru Kume, and Yasuhiro Takemura

Architecture Security Evaluation Method Based on Security of
the Components ........................................................................................................................................... 523
   Changxiao Du, Xiaohong Li, Hong Shi, Jing Hu, Ruitao Feng, and Zhiyong Feng

Short Papers: Software Project Management, Design,
Testing, and Verification

A New Scheduling Strategy for Risk Mitigation ........................................................................................... 529
   Peng Zhou and Hareton K.N. Leung

Designing User Experience for Mobile Apps: Long-Term Product Owner
Perspective ............................................................................................................................................... 535
   Kati Kuusinen and Tommi Mikkonen

Improving Analogy-Based Software Cost Estimation
through Probabilistic-Based Similarity Measures ....................................................................................... 541
   Passakorn Phannachitta, Jacky Keung, Akito Monden, and Ken-ichi Matsumoto

Multi-core Model Checking Algorithms for LTL Verification with Fairness
Assumptions ............................................................................................................................................. 547
   Xuan-Linh Ha, Thanh-Tho Quan, Yang Liu, and Jun Sun

Null Dereference Detection via a Backward Analysis .............................................................................. 553
   Qian Wang, Dahai Jin, and Yunzhan Gong

Results for Compositional Timed Testing ................................................................................................. 559
   Boutheina Bannour, Christophe Gaston, Marc Aiguier, and Arnault Lapitre

Short Papers: Formal Methods, Maintenance, and Web-Based
Software Engineering

Model Checking Liveness Properties under Fairness & Anti-fairness
Assumptions ............................................................................................................................................. 565
   Kazuhiro Ogata

JeB: Safe Simulation of Event-B Models in JavaScript .............................................................................. 571
   Faqing Yang, Jean-Pierre Jacquot, and Jeanine Souquières

Lehman’s Laws and the Productivity of Increments: Implications
for Productivity ....................................................................................................................................... 577
   Ramin Moazeni, Daniel Link, and Barry Boehm
2013 20th Asia-Pacific Software Engineering Conference

APSEC 2013 Industry Track: Program Committee..................................................................................xvi

APSEC 2013 Postgraduate Symposium:
Program Committee............................................................................................................................xvii

IWESEP 2013: Keynote Address.............................................................................................................xviii
International Workshop on Empirical Software Engineering in Practice 2013 (IWESEP 2013)

IWESEP: OSS Activity

Patch Reviewer Recommendation in OSS Projects ................................................................. 1
  John Boaz Lee, Akinori Ihara, Akito Monden, and Ken-ichi Matsumoto

A Study of the Characteristics of Developers' Activities in GitHub ......................................... 7
  Saya Onoue, Hideaki Hata, and Ken-ichi Matsumoto

Classifying Bug Reports to Bugs and Other Requests Using Topic Modeling .......................... 13
  Natthakul Pingclasai, Hideaki Hata, and Ken-ichi Matsumoto

IWESEP: Software Analysis

How Much Do Code Repositories Include Peripheral Modifications? ..................................... 19
  Noa Kusunoki, Keisuke Hotta, Yoshiki Higo, and Shinji Kusumoto

Grouping Objects for Execution Trace Analysis Based on Design Patterns ............................. 25
  Tatsuya Toda, Takashi Kobayashi, Noritoshi Atsumi, and Kiyoshi Agusa

Seamless Code Reuse with Source Code Corpus ....................................................................... 31
  Tetsuo Yamamoto, Norihiro Yoshida, and Yoshiki Higo

IWESEP: Project Management & Verification

0-1 Programming Model-Based Method for Planning Code Review Using Bug Fix History .............. 37
  Hirohisa Aman

Calibrating Productivity Drivers for Software Customisation Projects ...................................... 43
  Md. Mahmudul Hasan and Chris Lokan

Bidirectional Translation between OCL and JML for Round-Trip Engineering .......................... 49
  Hiroaki Shimba, Kentrao Hanada, Kozo Okano, and Shinji Kusumoto

International Workshop on Quantitative Approaches to Software Quality 2013 (QuASoQ 2013)

A Study of the Effect of Data Normalization on Software and Information Quality Assessment .......................................................... 55
  Morgan Ericsson, Welf Löwe, Tobias Olsson, Daniel Toll, and Anna Wingkvist

Modeling Code Analyzability at Method Level in J2EE Applications ...................................... 61
  Panita Meananeatra, Ekekachan Rattanaleadnusorn, Songsakdi Rongviriyapanish, Titiphan Kitcharoensup, Thanapol Wisuttikul, and Boonchai Charoendouysil
Identification of Inaccurate Effort Estimates in Agile Software Development ..................................................67

   Florian Raith, Ingo Richter, Robert Lindermeier, and Gudrun Klinker

History and Lessons Learnt from a Metrics Program at a CMMI Level 3 Company .............................................................73

   Matthias Vianden, Horst Lichter, Simona Jeners, and Karl-Joachim Neumann

APSEC 2013 Tutorials

Requirements Engineering Based on REBOK (Requirements Engineering Body Of Knowledge) and Its Practice .................................................................79

   Mikio Aoyama, Takako Nakatani, Shinobu Saito, and Yukako Iimura

Model-Based Transition from Requirements to High-Level Software Design ................................................81

   Hermann Kaindl

SAT and SMT: Their Algorithm Designs and Applications .............................................................................83

   Mizuhito Ogawa and To Van Khanh

Software Reuse Based on Business Processes and Requirements .............................................................85

   Hermann Kaindl

APSEC 2013 Industry Track

Industry Track: Software Testing and Maintenance

Practitioner-Oriented Visualization in an Interactive Search-Based Software Test Creation Tool .........................................................87

   Bogdan Marculescu, Robert Feldt, and Richard Torkar

An Automated Testing Tool for Java Application Using Symbolic Execution Based Test Case Generation ........................................................................93

   Supasit Monpratarnchai, Shoichiro Fujiwara, Asako Katayama, and Tadahiro Uehara

   Norifumi Nomura, Yasuhiro Kikushima, and Mikio Aoyama

Suggesting Extract Class Refactoring Opportunities by Measuring Strength of Method Interactions ........................................................................105

   Giuseppe Pappalardo and Emiliano Tramontana
Industry Track: Software Engineering Methodologies and Process

Experiences During Extraction of Variability Models for Warehouse Management Systems .................................................................111
   Miao Fang, Georg Leyh, Christoph Elsner, and Joerg Doerr

Software Engineering Education Program for Software Professionals of High Competency at DENSO .................................................................117
   Keiji Kobata, Takuji Uesugi, Hisayoshi Adachi, and Mikio Aoyama

Large Scale Model-Driven Engineering for a Multi-site Team -- Experience Report .................................................................................................................................123
   Asha Rajbhoj and Vinay Kulkarni

A Software and Integration Process Model for Offshore Vessels .................................................................................................................................129
   David N. Card

A Practical Study of Debugging Using Model Checking .........................................................................................................................................................134
   Hideto Ogawa, Makoto Ichii, Fumihiko Kumeno, and Toshiaki Aoki

Industry Track: Cloud, Embedded, and Real-Time Systems

Cloud Service Brokers: An Emerging Trend in Cloud Adoption and Migration .................................................................................................140
   Bimlesh Wadhwa, Aditi Jaitly, and Bharti Suri

A Case Study: Verification of Specifications of an Embedded System and Generation of Verification Items Using Pairwise Testing .................................................................................................146
   Toshifusa Sekizawa and Tsugu Kotorii

Testing of Timing Properties in Real-Time Systems: Verifying Clock Constraints .................................................................................................................................152
   Mehrdad Saadatmand and Mikael Sjödin

APSEC 2013 Postgraduate Symposium

A Hybrid Approach for Control Flow Graph Construction from Binary Code .................................................................................................159
   Minh Hai Nguyen, Thien Binh Nguyen, Thanh Tho Quan, and Mizuhito Ogawa

Mining GitHub: Why Commit Stops -- Exploring the Relationship between Developer's Commit Pattern and File Version Evolution .................................................................................................165
   Yang Weicheng, Shen Beijun, and Xu Ben

SamikshaUmbra: Contribution and Performance Assessment of Software Maintenance Professionals by Mining Software Repositories .................................................................................................170
   Ayushi Rastogi and Ashish Sureka

WTIP Author Index ........................................................................................................................................................................................................176
