2014 4th Interdisciplinary Engineering Design Education Conference

(IEDEC 2014)

Santa Clara, California, USA
3 March 2014
TABLE OF CONTENTS

INTERDISCIPLINARY ENGINEERING DESIGN EDUCATION CONFERENCE

Welcome to IEDEC 2014 ................................................................................................................................. iii
Committees ...................................................................................................................................................... iv
Invited Speakers .............................................................................................................................................. v
Santa Clara Convention Center Map ............................................................................................................. vi
Program at a Glance ...................................................................................................................................... vii

SESSION A
Chair: Kip Brown, Consultant
Co-Chair: Miroslav Velev, Aries Design Automation

Two Consecutive Project-Based Learning Engineering Design Courses –
An Analysis of Portfolio Assessment Results ................................................................................................. 1
Martin Jaeger1 and Desmond Adair2 ........................................... 1Australian College of Kuwait, 2Nazarbayev University

An Integrated Centrifugal Pump Rotor Design Course ............................................................................... 6
Desmond Adair1 and Martin Jaeger2 ........................................... 1Nazarbayev University, 2University of Tasmania

Bringing In-Class Online – A Hybrid Solution ............................................................................................ 12
Quoc-Viet Dang and Daniel Gajski ................................................................. University of California Irvine

Use of Online Assessments to Monitor Learning Outcomes in Higher Level Engineering Courses ... 18
Elliot Law and Sze Dai Pang ........................................................................................................... National University of Singapore

A Novel Knowledge Module to Integrate Threshold Logic and Post-CMOS Technology
into Undergraduate Logic Design Classroom ................................................................................................. 24
Jayita Das and Sanjukta Bhanja ................................................................. University South Florida

Interdisciplinary Engineering Education - Practice Based Case ................................................................ 31
Ville Taajamaa1, Tomi Westerlund1, Guo Xing2, Maija Hupli1, Sanna Salanterä1, Tapio Salakoski1
......................................................................................................... 1University of Turku, 2Fudan University

Design and Development of a Networked Health Monitoring and Control System ................................ 38
Rajesh Ranjan1, Basava Kumar Mukkundi1, Bishakh Bhattacharya1, Om Prakash Bhatt2
......................................................................................................... 1Indian Institute of Technology Kanpur, 2Amba Hospital Kanpur

SESSION B
Chair: David Craven, Lam Resaerch
Co-Chair: Ali Iranmanesh, Silicon Valley Polytechnic Institute

The Role of Finite Element Method Software in the Teaching of Electromagnetics .................................... 44
Marc Boulé ......................................................................................................................... École de technologie supérieure

Innovation and Creativity in Engineering Design: The Role of Student Engagement,
Team Spirit and Industry Support ............................................................................................................ 52
Farid Benyahia and Majeda Khraisheh ........................................................................................................ Qatar University

Introducing Field Programmable Gate Arrays with Deeds Projects ............................................................. 58
Giuliano Donzellini and Domenico Ponta ................................................................................................ University of Genoa

IC Design Course Based on the Synopsys DesignWare ARC 600 Processor Core
and 32/28nm Educational Design Kit ........................................................................................................ 66
Rich Goldman1, Karen Bartleson1, Troy Wood1, Allen Watson1, Vazgen Melikyan2, Eduard Babayan2,
Tigran Hakhverdyan2 .................................................................................................................... 1Synopsys, 2Synopsys Armenia
Low Flow Data Logger in Membrane Distillation: An Interdisciplinary Laboratory in Process Control
Katherine Zodrow, Valerie Coulter, Evyatar Shaulsky, Menachem Elimelech
Yale University

A Multidisciplinary Design Project for an Introduction to Engineering Course
David Claveau
California State University, Channel Islands

A Competition-Based Approach for Undergraduate Mechatronics Education
Using the Arduino Platform
Radhika Grover, Shoba Krishnan, Terry Shoup, Maryam Khanbaghi
Santa Clara University

A Web-Based Education Platform for Nanoscale Device Modeling and Circuit Simulation
Hao Zhuang¹, Jin He¹, Wanling Deng¹, Xiangyu Zhang¹, Xiaoan Zhu², Qingxin He², Mansun Chan³
¹Peking University, ²Shenzhen Huayue Terascale Chip Electronics, ³The Hong Kong University of Science and Technology
