International Institute of Applied Statistics Studies Conference (IASS 2009)

Quantitative Analysis Technology and Related Engineering Applications

Qingdao, China
1-3 July 2009

Volume 2 of 2

Editors:
Z. Konglai

CONTENTS

Chapter One: Agriculture

Study on the Influence of Pesticide Application on Sustainable Agriculture Development – Case Study from Guanghan Region, Sichuan Province
WANG Yan, FU Xinhong, SONG Wenting ................................................................. 1

Applying PPC Model Based on Particle Swarm Optimization in the Program Evaluation of Water and Fertilizer Management
ZHANG Zhongxue, REN An .................................................................................. 11

Impact of Agricultural Technology Adoption on Farmers’ Income in Yunnan: A PSM Based Analysis
CHEN Yuping, WU Haitao, DING Shijun, Su shi, Pandey ........................................... 17

Study on Spatial Variability of Soil Organic Matter Based on Matlab and Geo-statistics
WEI Yongxia, MA Yaping .................................................................................. 27

Water and Fertilizer Management Mode Screened with TOPSIS Method at High Yield and High Quality Rice Production
GUO Longzhu, PENG Shengmin, JIN Zhengxun ...................................................... 32

Optimization and Analysis of Mathematical Model on Yields and Quality of Spherical Fennel
CHEN Maoxue, ZHOU Aifeng ................................................................................ 37

Empirical Analysis of Animal Husbandry Cluster Development in Heilongjiang Province
LI Cuixia, QIAN Wei, PAN Fanghui ......................................................................... 42

Height-Diameter Equations of Three Main Coniferous Tree Species in Changbai Mountain, China Using Mixed-Effects Modeling Approach
ZHAO Junhui, KANG Xingang ................................................................................ 50

Discussion on the Calculation of the Out-of-control Criteria Probability of GB Shewhart Control Charts
SUN Xiaosu ............................................................................................................. 55

Simulation and Correlation Analysis of Meteorological Factors and Growing Dynamic of Plants in Growing Season
ZHANG Caiqin ....................................................................................................... 62

Chapter Two: Bio-technology

Optimization of Enzymatic Hydrolysis Conditions of Rapeseed Protein by RSM and Optimization of Regression Model
MU Yundong, GUO Xingfeng, ZHU Bi ...................................................................... 68

Research on Calculation Airborne Product Reliability Based on Analytic Hierarchy Process
HU Zhaohui, LUO Jixun, SUI Yonghua, TONG Huijun .............................................. 74

Improvement and Application of Discriminant Analysis Using Diversity Measure in Plant Taxonomy
XU Mimi, ZHANG Qing, LI Yongci .......................................................................... 79

An Optimal Design of Genetic Selection Operation
Chapter Three: Ecology and Environment
Hazard/Risk Assessment Based on Fuzzy Probability
WANG Zhan, YANG Qing

Quantitative Analysis of Ecosystem Based on Fuzzy Theory
HOU Jialin, ZHOU Xiaohui

Stepwise Regression Model of Enteritis Incidence and Meteorological Factors in Lintao County
TIAN Fupeng, GUI Lu

Research on Optimizing Water Resources Usage in Shijiazhuang Area
ZHANG Rui, LI Xiaojing

Landslide Susceptibility Mapping Based on GIS Using Logistic Regression Method in Three Gorges Area
ZHU Chuanhua, HU Guangdao, WANG Xueping

The Problems of Importance Value Calculation and Their Solutions in Quantitative Vegetation Ecology
ZHENG Fengying, WANG Yusong, SHANG GUAN Tieliang

Chapter Four: Medical Science and Health Care
Application of Association Rules in the Hepatocellular Carcinoma Data
YE Xiaofei, WU Jianhu, HE Jia

A Comparative Study of Two Multiple Classification Methods Based on Partial Least Squares Using Tumor Microarray Gene Expression Data
JIN Zhichao, GAO Qingbin, HE Jia

Evaluation of AIDS Treatments Based on Covariance Analysis
YUAN Yanhua

Survey of Knowledge, Attitudes, and Behaviors Related to HIV/AIDS Among the Mineworkers in China
QU Bo, GUO Haiqiang, GAO San

Establishment of Multivariate Reference Range for P-wave Amplitude
SHI Zengli, WANG Jun, GAO Yong

The Method to Estimate the Sample Size in Stratified Two-stage Sampling and Its Application in Medical Survey
FAN Yubo, GAO Ge

Applying Competing Risks Model to Estimating the Risk Coefficient of an Acute Infectious Disease
CHEN Zheng, NAKAMURA Tsuyoshi

The Study of Liver Surgery Patients’ Life Model Based on the Multiple Linear Regression Analysis Method
LI Desheng, HAN Cuicui, LIU Guangchen
Parameter Estimation for Sample Rotation of Successive Survey in Two-stage Sampling and Its Application

LIU Shengxue, GAO Ge, SHEN Yan ................................................................. 177

An Iterative Method of Continuity Corrections in Meta-analysis of Sparse Data

ZHANG Qiang, GENG Zhi ................................................................. 183

Susceptible-Infected-Susceptible Virus Spreading Model in Two Dimension Sparse Lattice under Local Area Control

GUO Changrui, CAI Shaohong, ZHOU Haiping, ZHANG Damin, ZHANG Yuqiang ........................................... 188

Comprehensive Evaluation of Medical Customer Perceived Value Based on Fuzzy Integral

LUO Yongtai, LI Zhiyong ................................................................. 193

Chapter Five: Manufacturing Industry

A Hierarchical Bayesian Method under Non-failure Data with Weibull Distribution

LI Yimin ................................................................. 200

Neural Network Assessment in Production and Operation Ability for Medium and Small-sized Enterprises

WANG Guan ................................................................. 205

Characteristics of Phase Transition of Bose-Einstein Condensation in Momentum Space

WANG Zhiguo ................................................................. 211

The Study on the Measurement of Technological Innovation Effects

HU Xiwei ................................................................. 217

The Estimation of the Dominant Capability of Successive Innovation System on Small and Middle Business

SUO Guibin ................................................................. 223

The Science and Technology Evaluation Model and Empirical Study Based on Maximizing Deviation and Fuzzy Comprehensive Evaluation

ZHANG Sui, CHI Guotai, ZHANG Mei ................................................................. 228

Process Parameters Optimization of Ni-TiO2 Nano-composite Coating by Electorodeposition on AZ91HP Magnesium Alloy

LIU Yan, YU Sirong, REN Luquan, YUAN Dongsheng ................................................................. 236

Research on 3PL Resource Integration Risk Based on Extension Evaluation

WANG Hong, LI Hongyan, WU Zhong ................................................................. 241

Determination of Product Fragility and Environment Parameters Based on Mathematical Statistics in Cushioning Package Design

KUANG Xianfeng, WANG Zhiwei ................................................................. 245

The Evolutionary-Game-Theory-Based Analysis of the Enterprise and Government Innovation Game

LUO Yafei, MENG Qingliang ................................................................. 250

Study on the Transparency of Chinese Dumpling Wrappers Made from Corn Starch

LI Guanglei, ZENG Jie, LI Gang, ZHANG Lingwen ................................................................. 260

The Research on Relationship Between Sigma Level and Non-conforming Rate
Chapter Six: Computer Engineering and Hitech Industry
Research on Web Extraction Technology and Its Application Based on Ontology
WU Hengliang, ZHANG Weiwei, CHEN Zhangliang .................................................. 306
The Researches on Investment Strategy of Multi-generation Emerging Technologies
ZHANG Wei, LIU Dezhi ................................................................................................ 311
Using Statistical Methods to Calculate and Analyze GPS' Reliability
LI Guozhong, GUI Qingming ...................................................................................... 318
Applications of Web Mining for Patterns of Online Shopping
CHEN Zhangliang, WU Hengliang, ZHANG Xingli ..................................................... 323
Entropy Application in Research on Differences of High-tech Industry
CHEN Siling, HOU Yawen ....................................................................................... 328
Research and Application of Web Data Mining
LI Ziyao ..................................................................................................................... 332
A Study of Knowledge Management System Model Based on ERP
LAI Jiyu, ZHENG Jianguo, CHEN Jingwu ................................................................. 335
Research on Online Consuming Based on Information System Model
WANG Haiping, HU Zhengming ............................................................................... 341
Research on Color Preference of Art Majored College Students
CHANG Lixia, QIAO Min, GAO Weidong .................................................................. 349
Matrix Variate Distributions and MIMO Channel Capacity
YAN Qiuna, YUE Dianwu ......................................................................................... 354
The Evaluation Analysis of Green Technological Innovation
HONG Yanyun, HE Qing ......................................................................................... 363

Chapter Seven: Resources and Energy Supply
Investigation and Statistical Analysis of Durability of Concrete Tunnels in Southeast Coastal Areas of China

LI Qiang .................................................................................................................. 367

Sensitivity Analysis of Nonparametric Efficiency Scores in Price Regulation of Electricity Distribution Market

WANG Qiufei, CHEN Guohong, SUN Yanli .................................................................... 372

The Research of Financing Efficiency for Electric Power Enterprises Based on Fuzzy Matter-element Model

DING Chao, QI Xiufei, YAN Junyin ............................................................................. 378

Research on Constructing Three-dimensional Index System to Evaluate Competitive Power of Steel Enterprises

ZHENG Guojie, GUO Jingrui, GUO Chunli .................................................................... 384

Improved Gray Relevant Analysis of Power Consumption Structure Factors in Shandong Province

WANG Jinliang, WANG Jinxue .................................................................................... 402

Applications of SVM for Natural Gas Demand Forecasting

SHAN Xian .................................................................................................................. 409

How Much does Oil Price Account for the Volatility of China’s Trade Balance?

DENG Xueqin, YANG Shihui ........................................................................................ 414

Non-parametric DEA Malmquist Index Method for Measuring Energy Efficiency in Eastern China Region

GE Yingyu, LI Chunping ............................................................................................ 419

An EKC Dispersed Model to Analyzing Relations between Coal Production and GDP Growth in Shandong Province

WANG Ruyan ........................................................................................................... 425

Measuring VaR of Oil Price Based on GARCH-type Models

LU Xiaoyong, ZHOU Decai ....................................................................................... 429

Research on Dynamic Predicting of Casing Damage based on Supporting Vector Machine

CHENG Yuanfang, KOU Yongqiang, JIA Jianghong .................................................... 436

Chapter Eight: Supply Chain and Logistics

Research and Application of Modeling for Spacecraft TT&C Ship Swaying Data

ZHANG Zhonghua, HUANG Kai, LI Xiaoyong, YANG Lei, CHEN Guiming .................... 442

Applied Research on Decision of Air Cargo Strategy Based on Data Mining

TANG Shiqiang, LI Hongyan, LI Cheng ...................................................................... 450

Research on Customer Classification Management of Exhibition Industry Based on the AHP Model

QIU Ling, WU Lingling .............................................................................................. 456
Study on Influence of Supply Chain Trust on its Cooperation

XIE Zhuojun..........................................................................................................................466

Research on Uncertain Navigation Capacity of the Three Gorges Lock Based on Monte Carlo Simulation Analysis Technique

LIU Tiexin, ZHANG Peilin, CHI Yanling.................................................................472

The Effects of FDI on Capital Formation in Central China — Analysis Based on Dynamic Panel Data with System GMM Estimation

SUN Ming, TAN Benyan ...................................................................................................477

An Empirical Study of User Toolkits and Customer Innovation Intention

HUANG Jing, ZHANG Sifei, TONG Yun ........................................................................482

The Study on Supply Chain Distribution Optimization Based on Bi-level Programming Model

YANG Jianhua, MU Dandan, NIU Xiaojin ........................................................................492

The Study on Relationship between FDI and Economical Development in Shandong Province which based on Panel Data Models

ZHU Konglai, CAO Yuanyuan, HUA Yingxia ..................................................................498

Chapter Nine: Securities and Finance

The Nonlinear Smooth Switching Regime in Copper Futures Basis of COMEX

YI Rong, ZHOU Xuejun, LI Hanguo ..............................................................................504

The Event Study of Split Share Structure Reform

LI Pu, ZHANG Qi .............................................................................................................511

An Application of Complex Networks: Researches on Stocks Strong Correlation

LAN Wangsen, ZHANG Suodi .......................................................................................517

A Cox Risk Model of Multiple Line Risk with Disturbance

DU Kun, ZHAO Mingqing ..............................................................................................522

The Two Classes of Risk Processes with a Threshold Dividend Strategy

FAN Qingzhu ..................................................................................................................526

The Measure Methods and Empirical Research of Return Volatility

MA Yulin, ZHAO Jing, YE Fei ......................................................................................532

A Markovian Risk Model with Batch Claim Arrival

GAO Shan, ZHANG Deran, LIU Zaihing .......................................................................538

Research on Optimizing the Investment Structure Based on Input-out Model

ZHAO Kejie, WANG Haizi, SONG Ping, LIU Juan .......................................................543

Measuring the Time-vary Dependence Between Financial Markets by Copula Method

CHEN Shoudong, HU Zhengyang ................................................................................549

Pricing European Option under Fractional Jump-Diffusion Ornstein-Uhlenbeck Model

XUE Hong, SUN Yudong ...............................................................................................555

An Empirical Study of China’s Stock Market Feedback Trading

ZHANG Yanliang, WANG Dongdong ..............................................................................561

An Analysis of CHIBOR Determinants

Chapter Ten: Social Security and Life Quality Measurement

Calculation of Aggregate Balance of China’s Pension Fund

SHAO Guohua .................................................................................. 709

Research on Transaction Efficiency, Labor Division and Income Growth in Rural Area Based on VEC Model

QI Chunjie, ZHAO Yu, YANG Miaomiao ........................................... 717

Analysis on Enhancing the Contribution of China’s Labor Depends on Rational Development of Small and Medium Enterprises

KONG Weiwei, QIN Weixin .................................................................. 724

A Comparative Analysis of Difference of MPCs in Separate Provinces with Dummy Variable Technique

SUN He .................................................................................................. 730

Matter-Element Model for College Students’ Employment Abilities Based on SPA

ZHANG Xiaoxi ................................................................................... 736

On Accurate Calculation Model of DC-DB Mixed Enterprise Pension

SONG Xiaozhong, JIANG Ming, LI Jinling ........................................... 741

Statistical Modeling the First-Time Reach of TV Program

LV Xiaoling, LO Hingpo, SONG Jie ................................................... 746

The Study on Sampling Method of Quality Inspection of Concrete Structure

LEI Yan, DOU Lijun ........................................................................... 751

Game Model of Safety Production of Enterprise and Workers

LIU Zhanyu, DING Rijia, ZHANG Rui .................................................. 755

Study on the Regional Level of Chinese Social Security Based on Grey Evaluation Theories

DUAN Jie .......................................................................................... 761

Study of Dynamic Model on Higher Education & Regional Economic Development Based on
Neural Networks
ZHANG Shoufeng, CHANG Xiangquan, WANG Xilong

Chapter Eleven: New Concept and Methodology
Delayed Renewal Theorems of Negatively Associated Random Variables with Applications to Risk Theory
YANG Yang

A New Multitype Geyer Point Process Model
CHEN Jianbao, DUAN Jinghui

A Practical Arithmetic of BDLM Based on ASL and Its Application
FU Yuanzhai

The Statistical Analysis of Parallel System for Exponential Distribution Under Type-I Censored Test
GU Beiqing, WANG Ronghua, XU Xiaoling

Statistical Application of Doubly Perturbed Neutral Diffusion Processes with Markovian Switching
LIU Dezhi

Study on the M/G/1 Queuing System of Preemptive Priority and its Application
WANG Yinyin, TANG Deshan

Statistical Application of Attraction for Impulsive Stochastic Differential Delay Equations with Markovian Switching
YANG Guiyuan

A New Algorithm of Linear Regression on the Total Least Squares
LU Tieding, ZHOU Shijian, GUAN Yunlan, ZHANG Liting

The Distribution of System Posture Difference of Five-element Connection Number for N=7
LIU Chunfeng, FAN Yanwei, YANG Yafeng, XIE Yujing

Testing the Reliability of Parallel Systems using Generalized P Values
MA Jianjun, XU Xingzhong, CONG Peijuan

Almost Sure Convergence Properties for $\mathbb{P}$-Mixing Sequences of Random Variables
WU Qunying, JIANG Yuanying

Chapter Twelve: Data Collection, Process and Quality Control
The Adjutative Ridge Regression Estimator in a Linear Regression Model with Application to Portland Cement Dataset
RONG Jianying, FENG Mei, LIU Xuqing

Cluster Analysis and Application of Functional Data
ZHU Jianping, DAI Ying, XU Gang

Hierarchical Clustering Algorithm Based on a New Measure
ZHANG Guofen, YE Jianjun

The Optimal Model of Process Capability Index Based on Quality Loss Functions
BAI Baoguang, JU Fang

Dynamic Measurement Analysis for Copper Futures Prices Based on VAR Model
Chapter Thirteen: Sampling Techniques and Modeling

Admissibility of Linear Estimators of Fixed and Random Effects in Balanced Nested Classification Models

WANG Shiqing, LOU Yan, ZHANG Rui ......................................................... 935

Mean Charts with Asymmetric Sampling Interval for Defecting Asymmetric Taguchi Loss

SUN Lirong, GUO Baocai ................................................................. 941

An Optimal Property on Mixed Estimator of Estimable Function in Linear Regression Model

ZHOU Yongzheng ................................................................. 947
The Estimate of Nonparametric Model Based on Dependent Observations under Censorship

QIU Jin..........................................................................................................................1063

Some New Results of The Multi-sample Permutation Test When Experiment Units Are Non-Uniform

JIN Mingzhong, JIN Liangqiong.......................................................................................1070

Chapter Fourteen: Survey and Estimator

Twice Maximum Likelihood Estimation for Step-stress Accelerated Life Test in the Exponential Distribution Based Type II Censoring

J IANG Hui, LIU Ruiyuan.................................................................................................1076

The Coordination Evaluation Model and Its Application of the Circular Economy System

LV Jiehua..........................................................................................................................1082

Shrunken Principal Component Least Squares Estimator

SHENG Zining..................................................................................................................1088

Analysis and Evaluation of Enterprise’s Science and Technology Innovation Ability Index Based on Questionnaire

YIN Zhijun, GUO Huijuan, WU Xia................................................................................1092

E-bayesian Estimation Method of Parameters and its Applications

HAN Ming.......................................................................................................................1097

The Choice of Copula Function and Estimation of VaR

LI Shushan.......................................................................................................................1103

Ridge Estimate on Moore-Penrose Inverse Matrix

TANG Xiaoyan, XU Wenke.............................................................................................1108

Weaker Component Test of MOBVE Distribution with Censored Data

GAO Feng, LIU Xuqing....................................................................................................1112

Transient Distribution of the Shortest Queue Model

CHENG Junxiang, LI Ming...............................................................................................1117

Some Properties of A Class of Compound Distribution with Two Parameters and Their Applications

ZHANG Heng, GUO Cheng, GUO Haibing, GAO Yuejiao, DONG Xiaobo.........................1122

On the Asymptotic Property of the Cox Correlative Risk Model Under Perturbation

LU Zhaoyang, XU Wei, SUN Yingling..............................................................................1126

Discount-least Square Estimation of Parameter of Autoregressive Prediction Model

LV Xiaoguo, WU Meijun, LV Damei, SUN Jianping.........................................................1141

A New Forecasting Method and its Application

ZHANG Jilin.......................................................................................................................1147

Parameters Estimation of Mixed Normal Distribution about Full Samples

MA Tao, RAO Liangxin, GONG Mingqing........................................................................1152

Stratified Cluster Sampling Technique in the Simmons Model on Dichotomous Sensitive Question Survey and its Application

PU Xiangke, GAO Ge, FAN Yubo, WANG Mian.................................................................1158

A Simple Bayesian Estimation of the Frechet Distribution

ZHAI Zongwu, LIU Xuqing..............................................................................................1163
LU Wanbo, JIAO Peng ................................................................. 1165
Estimation of Intrinsic Dimension Based on Denseness and Dispersal

TAN Lu, CHEN Xiaolan, GUO Hongfeng ........................................ 1172

Chapter Fifteen: Probability and Mathematical Statistics
Maximal Inequality and Strong Law of Large Numbers for LPQD Sequences

YU Lin .................................................................................. 1178

Global ANOVA for Nonlinear Regression

BAO Wenqing, ZHANG Yingshan, ZHANG Deran ......................... 1183

Wavelet Estimation in Nonparametric Regression Model Based on Negatively Associated Sequences

LI Yongming ........................................................................ 1188

The E-Bayes Estimates and Application of Binomial Distribution

WEI Chengdong, WEI Shi, SU Han ........................................... 1193

Parameter Design for Asymmetric Loss Function and Its Application

LI Chunping, HAO Huibing ..................................................... 1199

A Discussion on Eliminating Methods of the Heteroskedasticity Based on Glejser Test-with Eviews as Analysis Tool

SONG Tingshan .................................................................. 1203

A Class of Mixed-level Orthogonal Arrays with New Parameters

PANG Shanqi, YAN Rong, ZHANG Yingshan ............................... 1206

A Comparative Study of Summary Statistics F, G, and J based on their Kaplan-Meyer Estimators

XING Wenya, ZHANG Qing, CHEN Jianbao .............................. 1211

A New Multivariate Extensions of MCUSUM Procedure

LI Hongcheng ...................................................................... 1216

A Theoretical Approach to the Completed L-fuzzy Measure

LIU Hsiangchuan .................................................................. 1221

Learning the Black-Scholes Formula Via Support Vector Machines

CHEN Jianghong .................................................................. 1225
