2013 IEEE International Conference on High Performance Computing and Communications & 2013 IEEE International Conference on Embedded and Ubiquitous Computing

HPCC and EUC 2013

Table of Contents

HPCC 2013: Message from General Chairs ............................................................................. xxxiii
HPCC 2013: Message from Program Chairs ............................................................................ xxxiv
HPCC 2013: Message from Workshop Chairs .......................................................................... xxxv
HPCC 2013: Message from Steering Chairs ............................................................................. xxxvi
HPCC 2013: Organizing and Program Committees ................................................................... xxxvii
EUC 2013: Message from General Chairs .............................................................................. lxiv
EUC 2013: Message from Program Chairs ............................................................................. lxv
EUC 2013: Message from Workshop Chairs .......................................................................... lxvi
EUC 2013: Message from Steering Chairs ............................................................................. lxvii
EUC 2013: Organizing and Program Committees .................................................................... lxviii
TSP 2013: Message from Workshop Chairs .......................................................................... lxxxiv
IntelNet 2013: Message from Workshop Chairs ................................................................... lxxxv
EMCA 2013: Message from Workshop Chairs ....................................................................... lxxxvi
HPTC 2013: Message from Workshop Chairs ....................................................................... lxxxvii
NOPE 2013: Message from Workshop Chairs ....................................................................... lxxxviii
DMIoT 2013: Message from Workshop Chairs .................................................................... lxxxix
Phase Based and Application Based Dynamic Encoding Scheme for Multi-level Cell STT-RAM

Tianzhou Chen, Jinglei Meng, Jianliang Ma, Baixing Quan, and Jianzhong Wu

SPD-RAID4: Splitting Parity Disk for RAID4 Structured Parallel SSD Arrays

Wen Pan, Feng Liu, Tao Xie, Yanyan Gao, Yiming Ouyang, and Tian Chen

StackPool: A High-Performance Scalable Network Architecture on Multi-core Servers

Qiang Gu, Liufei Wen, Fen Dai, Hao Gong, Yongqiang Yang, Xiangyang Xu, and Zexi Feng

QoSFM: QoS Support for Metadata I/O in Parallel File Systems

Limin Xiao, Ke Xie, Guoying Li, Li Ruan, and Xiuqiao Li

A Hybrid Reconfigurable System for Parallel and Intensive Computation

Wei Ni, Xiang Wang, Su Zhang, Yukun Song, Yanhui Yang, and Jichun Bu

The Exchanged Folded Hypercube

Yang Li, Heng Qi, Zhiyang Li, and Keqiu Li

A Novel Deadline Assignment Strategy for a Large Batch of Parallel Tasks with Soft Deadlines in the Cloud

Xiao Liu, Dingxian Wang, Dong Yuan, and Yun Yang

A Secure Document Self-Destruction Scheme: An ABE Approach

Jinbo Xiong, Zhiqiang Yao, Jianfeng Ma, Ximeng Liu, and Qi Li

ACStack: Adaptive Composite Stack for Adjoint Models in Code Optimization

Hongyu Li, Weiyu Zhou, Shijie Yuan, and Shicheng Wen

MyCloud: On-Demand Virtual Cluster Provisioning on HPC Resources

Min Li, Xin Yang, Ze Yu, and Xiaolin Li

QoS-Aware Task Placement in Geo-distributed Data Centers with Low OPEX Using Dynamic Frequency Scaling

Lin Gu, Deze Zeng, and Song Guo

Agent Based Morphological Approach for Collaborative Shape Formation of Self-Organizable Unmanned Aerial Vehicles

Kiwon Yeom and Bum-Jae You
Session A2: Parallel and Distributed Software Technologies

CLSIFT: An Optimization Study of the Scale Invariance Feature Transform on GPUs .................................................................................................................. 93
Weiyan Wang, Yunquan Zhang, Long Guoping, Shengen Yan, and Haipeng Jia

Adaptive Data Replicas Management Based on Active Data-centric Framework in Cloud Environment ........................................................................................................ 101
Lingfeng Chen and Doan B. Hoang

A Novel Image Encryption Algorithm Based on Hyperchaotic System and Shuffling Scheme ........................................................................................................................................ 109
Xiaoheng Deng, Chunlong Liao, Congxu Zhu, and Zhigang Chen

A QoS-Aware Read Optimization Scheme for Heterogeneous Erasure-Coded Storage ............................................................................................................................ 117
Siti Huang, Jianzhong Huang, Qiang Cao, and Changsheng Xie

Multi-core Computation of Transfer Matrices for Strip Lattices in the Potts Model ........................................................................................................................................................................ 125
Cristobal A. Navarro, Nancy Hitschfeld, and Fabrizio Canfora

Automatic Mapping Single-Device OpenCL Program to Heterogeneous Multi-device Platform .................................................................................................................. 135
Dong Chen, Changqing Xun, Dafei Huang, Mei Wen, and Chunyuan Zhang

Session A3: Parallel and Distributed Algorithms

Cramer-Rao Lower Bound for Non-data Aided Carrier and Symbol Synchronization over Flat Rayleigh Fading Channel ........................................................................................................ 143
Monia Salem, Ammar Bouallegue, and Slaheddine Jarboui

GPU-Accelerated Parallel 3D Image Thinning .............................................................................................................................. 149
Bingfeng Hu and Xuan Yang

A Quadratic Exterior Penalty Function Based Probabilistic Analytical Target Cascading Method .......................................................................................................................... 153
Jian Kang, Ping Jiang, Liang Gao, and Jun Zheng

A Self-Organizing Distributed Memory Cache for Data Sharing Applications in Cluster Environment .................................................................................................................. 158
Weifeng Liu, Bin Gong, Yi Hu, and Yiru Guo

Privacy-Preserving Ranked Search on Public-Key Encrypted Data .......................................................................................................................... 165
Sahin Buyrukbilen and Spiridon Bakiras

Design of Cloud-Based Parallel Exclusive Signature Matching Model in Intrusion Detection .................................................................................................................. 175
Yuxin Meng, Wenjuan Li, and Lam-For Kwok
Cross Layer Optimal Design for Wireless Sensor Networks under Rayleigh
Fast Fading Channels ..........................................................................................................................183
  Kaoru Ota, Mianxiong Dong, Xue Chen, Anfeng Liu, and Zhigang Chen
Rethinking Virtual Machine Interference in the Era of Cloud Applications ........................................190
  Tianni Xu, Xiufeng Sui, Zhicheng Yao, Jiuyue Ma, Yungang Bao, and Lixin Zhang
Eliminating Conflicts in a Multilevel Cache Using XOR-Based Placement
Techniques ...........................................................................................................................................198
  Hemant Salwan
A Representation Model for TSP ..............................................................................................................204
  Yong Wang
Performance Model for Master/Worker Hybrid Applications on Multicore
Clusters ..................................................................................................................................................210
  Abel Castellanos, Andreu Moreno, Joan Sorribes, and Tomàs Margalef
Customer Satisfaction-Aware Scheduling for Utility Maximization
on Geo-distributed Cloud Data Centers ...............................................................................................218
  Chao Jing, Yanmin Zhu, and Minglu Li
An Adaptive Hybrid Spread Spectrum System Design and Anti-jamming
Capability Analysis .................................................................................................................................226
  XueYan Mei and Long Yu
DCP: Improving the Throughput of Asynchronous Pipeline by Dual Control
Path .......................................................................................................................................................230
  Bo Su, Li Shen, Lei Wang, Zhiying Wang, Yourui Wang, Libo Huang, and Wei Shi
Security Properties in Virtual Organizations .......................................................................................238
  Khalifa Toumi, Cesar Andres, and Ana Cavalli
Detecting Flood Attacks through New Density-Pattern Based Approach .................................................246
  Jinson Zhang and Mao Lin Huang

Session A4: Embedded Systems
GPU-Based Parallel EDF-Schedulability Analysis of Multi-modal Real-Time
Systems ....................................................................................................................................................254
  Masud Ahmed, Safranz Rampersaud, Nathan Fisher, Daniel Grosu, and Loren Schwiebert
A Cross-Layer Optimization Mechanism for Inter-session Network Coding
in Wireless Mesh Network .......................................................................................................................264
  Xiang Yang, Weiping Wang, and Jianxin Wang
Design and Implementation of a Prioritized Packet-Processing Module
on NetFPGA Platform ............................................................................................................................272
  Pang-Wei Tsai, Hou-Yi Chou, Pei-Wen Cheng, Mon-Yen Luo, and Chu-Sing Yang
Slack-Time-Aware Energy Efficient Scheduling for Multiprocessor SoCs ......................................................278
   Xin Li, Zhiping Jia, and Lei Ju

ARSM: A Lightweight Packet Reception Notification Mechanism for Wireless
Localized Network Coding ..........................................................................................................................286
   Hao Li, Weiping Wang, Xiang Yang, and Mingming Lu

Parallelizing Dynamic Time Warping Algorithm Using Prefix Computations
on GPU .....................................................................................................................................................294
   Limin Xiao, Yao Zheng, Wenqi Tang, Guangchao Yao, and Li Ruan

Arbor: Efficient Large-Scale Graph Data Computing Model .................................................................300
   Wei Zhou, Bo Li, Jizhong Han, and Zhiyong Xu

A FPGA-Based High Performance Acceleration Platform for the Next
Generation Long Read Mapping .............................................................................................................308
   Peng Chen, Chao Wang, Xi Li, and Xuehai Zhou

Session A5: Peer-to-Peer Computing

A Novel NLOS Localization Method Based on Tabu Search .................................................................316
   Long Cheng, Chengdong Wu, Hao Wu, and Li Chen

Framework of Ambient Intelligence System for Smart Agri-food Management ...............................321
   Charles Z.-Z. Liu and Lin Yang

SmartMal: A Service-Oriented Behavioral Malware Detection Framework
for Smartphones .......................................................................................................................................329
   Chao Wang, Zhizhong Wu, Aili Wang, Xi Li, Feng Yang, and Xuehai Zhou

An Intelligent Transportation System Using RFID Based Sensors ......................................................337
   Chao Wang, Xi Li, Aili Wang, Feng Yang, and Xuehai Zhou

A Robust Dimensionality Reduction Method from Laplacian Orientations ........................................345
   Zhaokui Li, Lixin Ding, and Yan Wang

Session A6: Grid and Cluster Computing

Towards Adapting Parallel Programs to Different Platforms: Identifying Interaction Patterns .....................352
   Bogdan Florin Cornea, Jaroslaw Slawinski, Julien Bourgeois, and Vaidy Sunderam

User-Oriented and Content-Oriented Strategy in P2P IPTV System .....................................................360
   Pan Wang, Hao Huang, and Changsheng Xie

Data Allocation for Embedded Systems with Hybrid On-Chip Scratchpad and Caches .......................366
   Guanhua Wang, Lei Ju, Zhiping Jia, and Xin Li

Constructing Compact Logical Arrays under Flexible Rerouting Schemes ........................................374
   Guiyuan Jiang, Jigang Wu, Jizhou Sun, and Yiyi Gao
Event-Driven Fault Tolerance for Building Nonstop Active Message Programs .................................................. 382
Chao Li, Changhai Zhao, Haihua Yan, and Jianlei Zhang

**Session A7: Web Services and Internet Computing**

uCaché: A Utility-Aware Multilevel SSD Cache Management Policy .......................................................... 391
Dejun Jiang, Yukun Che, Jin Xiong, and Xiaosong Ma

Consolidating Applications for Energy Efficiency in Heterogeneous Computing Systems .................................................. 399
Jing Zhang, Hao Wang, Heshan Lin, and Wu-Chun Feng

On the Reproducibility of MPI Reduction Operations .................................................................................. 407
Pavan Balaji and Dries Kimpe

CloudRank-V: A Desktop Cloud Benchmark with Complex Workloads .................................................. 415
Lin Cai, Zhen Jia, Yong Qi, and Lei Wang

Multi-leader Multi-follower Game Power Control with Utility Learning for Cooperative Relay Networks over Interference Channels .................................................................................................................. 422
Zhengfa Zhu, Jun Peng, Shuo Li, Fu Jiang, Weirong Liu, Qi Tong, and Chaoliang Zhu

SLA-Driven State Monitoring for Cloud Services .................................................................................. 428
Yuchao Zhang, Hongfu Liu, Yuruo Lu, and Bo Deng

**Session A8: Cloud Computing**

Analysis and Improvement of Makespan and Utilization for MapReduce .................................................. 434
Yin Li, Chuang Lin, and Fengyuan Ren

LoRe: Supporting Non-deterministic Events Logging and Replay for KVM Virtual Machines .................................................. 442
Jianxin Li, Shouyu Si, Bo Li, Lei Cui, and Jingsheng Zheng

On the Notion of Decoupling in Mobile Cloud Computing .................................................................................. 450
Abadhan Sabyasachi Sabyasachi, Sohini De, and Suddhasil De

A Bounding Histogram Approach for Network Performance Analysis .................................................. 458
F. Aït-Salaht, H. Castel-Taleb, J. M. Fourneau, and N. Pekergin

An Efficient Routing Scheme for Overlay Network of SOAP Proxies in Constrained Networks .................................................. 466
Muhammad Ali, Hailong Sun, and Wei Yuan

Measurement and Control of Linux Operating System Noise on the Godson-3A Shared-Memory Multicore Platform .................................................................................................................. 474
Lei Wang, Yulong Zhao, and Zhen Wang

Three-Point Correlation Function Parallel Algorithm Based on MPI .................................................. 482
Lingyan Yin, Ce Yu, Jizhou Sun, Xu Liu, Jian Xiao, and Chao Sun
Arithmetic Computation Using Self-Assembly of DNA Tiles: Modular-Square over Finite Field GF(2^n) .................................................................................................................................490
Yongnan Li, Limin Xiao, Li Ruan, and Aihua Liang

LANCStream: A Locality-Aware and Network Coding-Based P2P Live Streaming System ...........................................................................................................................................496
Laizhong Cui and Nan Lu

High Performance Implementation of ARIA Encryption Algorithm on Graphics Processing Units ..................................................................................................................................................................................504
Limin Xiao, Yongnan Li, Li Ruan, Guangchao Yao, and Deguo Li

HySF: A Striped File Assignment Strategy for Parallel File System with Hybrid Storage ..........................................................................................................................................................................................................................511
Mingfa Zhu, Guoying Li, Li Ruan, Ke Xie, and Limin Xiao

Vectorizing for Wider Vector Units in a HW/SW Co-designed Environment ........................................................................................................................................................................................................................................518
Rakesh Kumar, Alejandro Martinez, and Antonio González

Content Delivery Networks in the Cloud with Distributed Edge Servers ........................................................................................................................................................................................................................................526
Parag Panchal, Nikhil Meenakshaiah Ramaswamy, Xiao Su, and Yi Dong

An IP Protection Algorithm by Watermarking Multiple Scan Chains Based on Minimum Correlation Degree of Vectors ................................................................................................................................................................................................................................................533
Wei Liang, Da-Fang Zhang, Jing Long, Yanbiao Li, Yan-Ji Hu, and Xiong Li

Make Your Webpage Carry Abundant Secret Information Unawarely ................................................................................................................................................................................................................................................................................541
Xiaojun Guo, Guang Cheng, Chengang Zhu, Aiping Zhou, Wubin Pan, and Dinhvu Truong

Large Scale Satellite Imagery Simulations with Physically Based Ray Tracing on Tianhe-1A Supercomputer ................................................................................................................................................................................................................................................549
Changmao Wu, Yunquan Zhang, and Congli Yang

Shall I Use Heterogeneous Data Centers? - A Case Study on Video on Demand Systems ...........................................................................................................................................................................................................................................................................557
Shi Feng, Hong Zhang, and Wenguang Chen

A Service-Oriented Spectrum Assignment Algorithm for Cognitive Wireless Networks ........................................................................................................................................................................................................................................................................565
Hongwei Niu, Quan Liu, Wenjun Xu, and Duzhong Zhang

Domain-Based MapReduce Programming Model for Complex Scientific Applications ........................................................................................................................................................................................................................................................................572
Min Li, Xin Yang, and Xiaolin Li

GCMR: A GPU Cluster-Based MapReduce Framework for Large-Scale Data Processing ................................................................................................................................................................................................................................................................................580
Yiru Guo, Weiguo Liu, Gerrit Voss, and Wolfgang Mueller-Wittig

An Energy-Aware Resource Allocation Heuristics for VM Scheduling in Cloud ...........................................................................................................................................................................................................................................................................587
Jinhai Wang, Chuanhe Huang, Kai He, Xiaomao Wang, Xi Chen, and Kuangyu Qin
Session A9: Performance Evaluation and Measurement

COMSP: Correlated Contact and Message Scheduling Policy in DTN .................................................595
  Zhenxi Sun, Yuebin Bai, Rui Wang, and Weitao Wang

Performance Evaluation and Tuning of 2D Jacobi Iteration on Many-Core Machines .................................................................603
  Zhengxiong Hou and Christian Perez

Characteristics of ETX Link Quality Estimator Under High Traffic Load in Wireless Networks ..................................................611
  Anh Tai Tran and Myung Kyun Kim

DKISB: Dynamic Key Instruction Sequence Birthmark for Software Plagiarism Detection ..........................................................619
  Zhenzhou Tian, Qinghua Zheng, Ting Liu, and Ming Fan

A Comparative Study of Preconditioners for GPU-Accelerated Conjugate Gradient Solver ..........................................................628
  Yao Chen, Yonghua Zhao, Wei Zhao, and Lian Zhao

Virtual Network Mapping Algorithm with Substrate Node Reliability Awareness and Shared-Path Protection ......................................636
  Guangyuan Liu and Sen Su

Analyzing the Suitability of Cloud-Based Multimedia Surveillance Systems ..............................................................................644
  M. Anwar Hossain

Towards Efficient Deployment of Cloud Applications through Dynamic Reverse Proxy Optimization .............................................651
  Wei Yuan, Hailong Sun, Xu Wang, and Xudong Liu

Accelerating Intersection Computation in Frequent Itemset Mining with FPGA .................................................................659
  Shaobo Shi, Yue Qi, and Qin Wang

Web-Based Semantic Web Retrieval Service for Law Ontology ..........................................................................................666
  Dae Woong Jo and Myung Ho Kim

Abstraction of On-Board Resources in Mobiles: SAaaS4Mobile, a First Step towards a Sensing Cloud ..................................674
  Lionel Cremer, Salvatore Distefano, Giovanni Merlino, and Antonio Puliafito

An Optimistic Non-repudiation Protocol Focused on Transparent Trusted Third Party .................................................................682
  Qiang Li, Kaigui Wu, and Fang Li

Adaptive Routing Based on Bayesian Network and Fuzzy Decision Algorithm in Delay-Tolerant Network ....................................690
  Jiaojiao Liang, Yuebin Bai, Chongguang Bi, Zhenxi Sun, Changjiang Yan, and Hongquan Liang
ParalInsight: An Assistant for Quantitatively Analyzing Multi-granularity Parallel Region .................................................................698
  Ran Ao, Guangming Tan, and Mingyu Chen
Mechanisms of Optimizing MapReduce Framework on High Performance Computer ...........................................................................708
  Jie Yu, Guangming Liu, Wei Hu, Wenrui Dong, and Weiwei Zhang
A Data Model for Performance Dynamics Exploration ..........................................................714
  Yury Oleynik, Michael Gerndt, and Andrés I. Ávila
Memory or Time: Performance Evaluation for Iterative Operation on Hadoop and Spark ..............................................................721
  Lei Gu and Huan Li
Online Performance Introspection with IPM ........................................................................728
  Xavier Aguilar, Erwin Laure, and Karl Fürlinger
A Performance Visualization Method for OpenMP Tasks .........................................................735
  Cheng Qian, Zhijin Ding, and Haiping Sun
Model-Led Optimisation of a Geometric Multigrid Application .........................................742
  Richard Bunt, Simon Pennycook, Stephen Jarvis, Leigh Lapworth, and Yoon Ho

Session A10: Tools and Environments for Software Development

Data Decomposition for Code Parallelization in Practice: What Do the Experts Need? .................................................................754
  Anne Meade, Deva Kumar Deeptimahanti, Michael Johnston, Jim Buckley, and J.J. Collins
A Global Optimal Service Selection Approach Based on QoS and Load-Aware in Cloud Environment ..........................................................762
  Xian Wang, Jianxun Liu, Buqing Cao, and Mingdong Tang
Performance Comparison of DASH7 and ISO/IEC 18000-7 for Fast Tag Collection with an Enhanced CSMA/CA Protocol ...........................................769
  Hwakyung Lee, Sang-Hwa Chung, Yun-Sung Lee, and Yoobin Ha
ERES: An Energy-Aware Real-Time Elastic Scheduling Algorithm in Clouds .........................777
  Huangke Chen, Xiaomin Zhu, Jianghan Zhu, and Jianjiang Wang
Correlation Analysis of Multivariate Neural Signals with Massively Parallel Wavelet Coherence ..................................................................................785
  Weizhou Peng, Yangyang Hu, Ke Zeng, Xiaodao Chen, Dan Chen, Haiqing Chen, Jiaqin Yan, and Xiaoli Li
PAThWay: Performance Analysis and Tuning Using Workflows ...........................................792
  Ventsislav Petkov, Michael Gerndt, and Michael Firbach
### Session A11: Distributed Systems and Applications

**Automatic Generation of Communications for Redundant Multi-dimensional Data Parallel Redistributions**
Corinne Ancourt, Teodora Petrisor, Francois Irigoin, and Eric Lenormand

**Performance Evaluation of LAMMPS on Multi-core Systems**
Kwangho Cha

**A Hadoop MapReduce Performance Prediction Method**
Ge Song, Zide Meng, Fabrice Huet, Frederic Magoules, Lei Yu, and Xuelian Lin

**A Novel Thread Partitioning Approach Based on Machine Learning for Speculative Multithreading**
Bin Liu, Yinliang Zhao, Xiang Zhong, Zengyu Liang, and Boqin Feng

**Method to Evaluate Software Protection Based on Attack Modeling**
Huaijun Wang, Dingyi Fang, Ni Wang, Zhanyong Tang, Feng Chen, and Yuanxiang Gu

---

### Session A12: High-Performance Scientific and Engineering Computing

**GPU-Based Barrel Distortion Correction for Acceleration**
Luo Shuhua and Zhang Jun

**Exploiting Fingerprint Prefetching to Improve the Performance of Data Deduplication**
Liangshan Song, Yuhui Deng, and Junjie Xie

**Grid-Based Real-Time Data Gathering Protocol in Wireless Sensor Network with Mobile Sink**
Wenjun Liu, Jianxi Fan, Shukui Zhang, Yan Wang, and Yan Chu

**A Hypervisor for MIPS-Based Architecture Processors - A Case Study in Loongson Processors**
Rui Zhou, Zhu Ai, Jiaming Yang, Yucong Chen, Jun Li, Qingguo Zhou, and Kuan-Ching Li

**An Efficient Topology Reconfiguration Algorithm for NoC Based Multiprocessor Arrays**
Chao Wang, Jigang Wu, Guiyuan Jiang, and Jizhou Sun

**A Privacy-Preserving Data Obfuscation Scheme Used in Data Statistics and Data Mining**
Pan Yang, Xiaolin Gui, Feng Tian, Jing Yao, and Jiancai Lin

**An Improved Privacy Preserving Algorithm for Publishing Social Network Data**
Peng Liu and Xianxian Li
Protecting Outsourced Data Privacy with Lifelong Policy Carrying .......................................................... 896
   Xiaoguang Wang, Qi Yong, Yuehua Dai, Jianbao Ren, and Zhang Hang

Low Execution Efficiency: When General Multi-core Processor Meets Wireless Communication Protocol ............................................................................................................ 906
   Fenglong Song, Yasong Zheng, Futao Miao, Xiaochun Ye, Hao Zhang, Dongrui Fan, and Zhiyong Liu

Parallel B&B Algorithm for Hybrid Multi-core/GPU Architectures .......................................................... 914
   A. Bendjoudi, M. Chekini, M. Gharbi, M. Mehdi, K. Benatchba, F. Sitayeb-Benbouzid, and N. Melab

MVSS: Mobile Visual Search Based on Saliency .................................................................................. 922
   Yegang Du, Zhiyang Li, Wenyu Qu, Siyang Miao, Songhe Wang, and Heng Qi

Security Analysis for Hilbert Curve Based Spatial Data Privacy-Preserving Method .......................................................... 929
   Feng Tian, Xiaolin Gui, Pan Yang, Xuejun Zhang, and Jianwei Yang

Game Theoretical Analysis of the Acceptance of Global Trust Management for Unwanted Traffic Control ..................................................................................................................... 935
   Yue Shen, Zheng Yan, and Raimo Kantola

Parallel Optimization of the MM5 Adjoint Model .................................................................................. 943
   Hongyu Li, Jie Bian, Shijin Yuan, and Jiachuan Qin

VDB: Virtualizing the On-Board Disk Write Cache .................................................................................. 948
   Xiaofei Liao, Hai Jin, Xuhong Wang, Bingbing Zhou, and Dingding Li

Optimizing Multi-join in Cloud Environment ......................................................................................... 956
   Yongcai Tao, Mengxue Zhou, Lei Shi, Lin Wei, and Yangjie Cao

PIN-Cache: An Effective Cache Scheme Designed for Application Performance Insulation .......................................................... 964
   Chengxiang Si, Bo Sun, and Xiaoxuan Meng

S2P2P: Semantic Search in Unstructured Peer-to-Peer Networks .............................................................................. 971
   Xiaoqi Cao and Matthias Klusch

   Jianliang Gao, Jianxin Wang, and Weiping Wang

Performance Bottlenecks in Manycore Systems: A Case Study on Large Scale Feature Matching within Image Collections ................................................................................................................. 985
   Xiaoxin Tang, Steven Mills, David Eyers, Kai-Cheung Leung, Zhiyi Huang, and Minyi Guo

ILGA: An Improved Local Greedy Algorithm for Optimal Parameters Searches .......................................................... 996
   Renjiao Yi, Pingjing Lu, Bao Li, and Jianping Yin

GPU-Based Implementation of Finite Element Method for Elasticity Using CUDA .......................................................... 1003
   Jianfei Zhang and Defei Shen
Solving the Cardiac Model Using Multi-core CPU and Many Integrated Cores (MIC) ...........................................................................................................................................................................................................1009
  Jing Yang, Jun Chai, Mei Wen, Nan Wu, and Chunyuan Zhang

Session A13: Database Applications and Data Mining

Energy Aware Scheduling for Precedence Constrained Parallel Tasks in a Power-Scalable Cluster ...........................................................................................................................................................................................................................................1016
  Aihua Liang, Limin Xiao, Yongnan Li, Zhenzhong Zhang, and Li Ruan

Automated Tiering in a QoS Environment Using Coarse Data ..................................................................................................................................................................................................................................................................1022
  Gal Lipetz, Etai Hazan, Assaf Natanzon, and Eitan Bachmat

Accelerating Applications Using GPUs on Embedded Systems and Mobile Devices ...........................................................................................................................................................................................................................................1031
  Miaoqing Huang and Chenggang Lai

Design and Optimization of a Big Data Computing Framework Based on CPU/GPU Cluster ...........................................................................................................................................................................................................................................1039
  Yanlong Zhai, Ying Guo, Qiurui Chen, Kai Yang, and Emmanuel Mbarushimana

Enhancing Query Performance by Avoiding Negative Interactions ...........................................................................................................................................................................................................................................1047
  Zhang Qing-Feng, Xu Jing, Li Shan-Shan, and Wang Qing-Ju

DTW-Based Subsequence Similarity Search on AMD Heterogeneous Computing Platform ...........................................................................................................................................................................................................................................1054
  Sitao Huang, Guohao Dai, Yuliang Sun, Zilong Wang, Yu Wang, and Huazhong Yang

Direction-Optimizing Breadth-First Search on CPU-GPU Heterogeneous Platforms ...........................................................................................................................................................................................................................................1064
  Dan Zou, Yong Dou, Qiang Wang, Jinbo Xu, and Baofeng Li

Session A14: Biological/Molecular Computing

A Novel Semantic Web Service Discovery Scheme Using Bipartite Graph ...........................................................................................................................................................................................................................................1070
  Shirin Akther Khanam, Kyung Hwan Oh, Woo Sik Seol, and Hee Yong Youn

A Security-Awareness Virtual Machine Placement Scheme in the Cloud ...........................................................................................................................................................................................................................................1078
  Si Yu, Xiaolin Gui, Feng Tian, Pan Yang, and Jianqiang Zhao

Research on QoS Routing in the Internet ............................................................................................................................................................................................................................................................................................1084
  Jiandan Yang and Quanlong Guan

An Efficient Graph Isomorphism Algorithm Based on Canonical Labeling and Its Parallel Implementation on GPU ...........................................................................................................................................................................................................................................1089
  Renda Wang, Longjiang Guo, Chunyu Ai, Jinbao Li, Meirui Ren, and Keqin Li

Using Traditional Data Analysis Algorithms to Detect Access Patterns for Massive Data Processing ...........................................................................................................................................................................................................................................1097
  Jiaqi Zhao, Jie Tao, Lizhe Wang, Rajiv Ranjan, and Joanna Kolodziej
GGAKE: GPU Based Genome Assembly Using K-Mer Extension .........................................................1105
    Anshuj Garg, Ashutosh Jain, and Kolin Paul

Session A15: Mobile Computing and Wireless Communications

A Parallel Fusion Algorithm of Remote Sensing Images Based on Wavelet Transform .........................................................1113
    Xiaorong Xue, Fang Xiang, Hongfu Wang, and Jinxin Peng

Energy-Aware Rolling-Horizon Scheduling for Real-Time Tasks in Virtualized Cloud Data Centers .................................................................1119
    Xiaomin Zhu, Huangke Chen, Laurence T. Yang, and Shu Yin

Real-Time Fault-Tolerant Scheduling Based on Primary-Backup Approach in Virtualized Clouds .................................................................1127
    Ji Wang, Xiaomin Zhu, and Weidong Bao

A Zoning Strategy for Uniform Deployed Chain-Type Wireless Sensor Network in Underground Coal Mine Tunnel .................................................................1135
    Gongbo Zhou, Linghua Huang, Zhencai Zhu, Wei Li, and Gang Shen

GPS: A General Framework for Parallel Queries over Data Streams in Cloud .................................................................1139
    Xiaoyong Li, Yijie Wang, Yu Zhao, Yuan Wang, and Xiaolong Li

A Grey-Based Rough Set Approach for Software Risk Prediction: A Case Study .................................................................1147
    Jun Liu and Jianzhong Qiao

Software Attack Modeling and Its Application .................................................................1152
    Huaijun Wang, Dingyi Fang, Hao Dong, Yuanxiao Lei, Xiaoqing Gong, and Yuanxiang Gu

Secure Route Discovery for Preventing Black Hole Attacks on AODV-Based MANETs .................................................................1159
    Seryvuth Tan and Keecheon Kim

Semi-implicit Red/Black Solver for Incompressible Navier-Stokes Equations on GPGPU .................................................................1165
    Dmitry Timofeev

Lifetime Maximization for Multi-modal Confident Information Coverage in Sensor Networks .................................................................1173
    Xianjun Deng, Bang Wang, Wenyu Liu, Laurence T. Yang, and Jiaoyan Chen

An Adaptive Resource Sharing Platform for Internet Data Center .................................................................1179
    Qing Li, Yong Li, Bibo Tu, and Dan Meng

TCP_SDF: Transport Control to Achieve Smooth Data Flow at a Stable Throughput .................................................................1187
    Xukang Lu, Chase Qishi Wu, Paul Sheldon, Alan Tackett, and Mathew Binkley
SuperFlow: A Reliable, Controllable and Scalable Architecture for Large-Scale Enterprise Networks .................................................................1195
   Guangwu Hu, Ke Xu, and Jianping Wu
Overhead Model of CCM for Industrial Wireless Network .................................................................1203
   Xinqiang Luo, Yue Qi, Yadong Wan, and Qin Wang
A Cloud Computing Based Management System for Wireless Mesh Networks ...............................1209
   Huichun Hu, Xinhua Jiang, Quan Zhu, and Fumin Zou
Vehicle Tracking with Non-overlapping Views for Multi-camera Surveillance System .................................................................1213
   Wenbin Jiang, Chang Xiao, Hai Jin, Shuo Zhu, and Zhiwei Lu
B-Alarm: An Entropy Based Burst Traffic Prediction Approach for Ethernet Switches in Data Centers ....................................................................1221
   Hao Wu, Javid Taheri, and Albert Zomaya
Equivalent Channel Gain Based Opportunistic Multiple Relays Selection with Network Coding in Wireless Cooperative Communication System .................................1227
   Fu Jiang, Weirong Liu, Jun Peng, Shuo Li, and Zhengfa Zhu
PRoPHET Routing Protocol Based on Neighbor Node Distance Using a Community Mobility Model in Delay Tolerant Networks .................................................................1233
   Phearin Sok, Seryvuth Tan, and Keecheon Kim

Session A16: Computer Networks
A Secure QoS Routing Algorithm Based on ACO for Wireless Sensor Network ..............................1241
   Qinghua Shi and Zhong Li
A High-Performance and Cost-Efficient Interconnection Network for High-Density Servers .....................................................................................1246
   Wentao Bao, Binzhang Fu, Mingyu Chen, and Lixin Zhang
An Evolutionary Multi-agent Preventive Fault-Tolerant QoS Unicast Routing Mechanism ......................1254
   Xin Man, Xing-Wei Wang, and Min Huang
Adaptive Relay Selection Algorithm Based on Network Coding in 802.16m Network .................................................................1262
   YaXing Zhou, Hong Song, and WeiPing Wang
Constructing Fuzzy Ontology by Using Method of Concept Distance Clustering ..................................1269
   Ning Liu, Feng-Jiao Sun, Bo Ning, and Qiang-Qiang Li
An Adaptive Trusted Request and Authorization Model for Mobile Peer-to-Peer Networks ..............1274
   Zhiyuan Li and Junlei Bi
Link Adaptation Scheme with Signal-to-Noise Ratio Feedback for IEEE 802.11 Networks

Xiaoheng Deng, Xu Li, Qiang Liu, and Zhigang Chen

A Load Balance Link Layer Protocol for Multi-channel Multi-interface Wireless Mesh Networks

Xiaoheng Deng, Qiang Liu, Xu Li, Lin Cai, and Zhigang Chen

MR-MC Manufacturing Sensor Network Based on Nested Cellular Topology

Ping Ren

Measuring and Discovering Correlations in Large Data Sets

Lijue Liu, Ming Li, and Sha Wen

CUDA Implementation of a Euler Solver for Cartesian Grid

Yang Liu, Yufei Pang, Bo Chen, Hanshan Xiao, and Hanli Bai

Projection Pursuit Based Wormhole Detection in Ad Hoc Network

Fu Cai, Cui Yongquan, Han Lansheng, and Fang Zhicun

Node Density-Based Adaptive Spray and Focus Routing in Opportunistic Networks

Yao Liu, Jianxin Wang, Hongjing Zhou, and Jiawei Huang

A Multi-dimensional Packet Classification Algorithm Based on Hierarchical All-Match B+ Tree

Gang Wang, Yaping Lin, Jinguo Li, and Xin Yao

X10-PM: Transparent and Efficient Place Migration for APGAS Language

Zhijun Hao, Binyu Zang, Chenning Xie, and Haibo Chen

An Energy-Efficient Scheme for STT-RAM L1 Cache

Jun Yao, Jianliang Ma, Tianzhou Chen, and Tongsen Hu

Parallelization and Optimization of SIFT on GPU Using CUDA

Zhou Yonglong, Mei Kuizhi, Ji Xiang, and Dong Peixiang

VCBR: Virtual Channel Balanced Routing in Torus Networks

Zhigang Yu, Dong Xiang, and Xinyu Wang

vMON: An Efficient Out-of-VM Process Monitor for Virtual Machines

Nan Li, Bo Li, Jianxin Li, Tianyu Wo, and Jinping Huai

CloudAP: Improving the QoS of Mobile Applications with Efficient VM Migration

Yunkai Zhang, Renyu Yang, Tianyu Wo, Chunming Hu, Junbin Kang, and Lei Cui

DIMR: Disjoint Interdomain Multipath Routing

Dan Wu, Zhiliang Wang, Xia Yin, Xingang Shi, Jianping Wu, and Min Huang

An Energy Efficient Optimization Routing Strategy Based on Rate Adaptation

Peng Feng, Gaocai Wang, Nao Wang, and Daofeng Li
Enhancing Lifetime and Quality of Data in Cluster-Based Hierarchical Routing Protocol for Wireless Sensor Network ..........................................................1400
Mian Ahmad Jan, Priyadarsi Nanda, Xiangjian He, and Ren Ping Liu

Session A17: Telecommunications
An Efficient, QoS-Aware I/O Scheduler for Solid State Drive ..........................................................1408
Quan Zhang, Dan Feng, Fang Wang, and Yanwen Xie
Design and Implementation of a Channel Load Aware Path and Gateway Selection Scheme in Multi-channel Multi-interface Wireless Mesh Networks ..................................1416
Chang-Woo Ahn and Sang-Hwa Chung
A Reputation-Based Method to Secure Inter-Domain Routing ..........................................................1424
Na Wang and Bin-Qiang Wang

Session A18: Autonomic, Reliability, and Fault Tolerance
Minimizing Virtual Machine Migration Probability for Cloud Environments .....................................1430
Xiaojiao Chen, Shiping Chen, Fan-Hsun Tseng, Li-Der Chou, and Han-Chieh Chao
A Data Parallel Strategy for Haplotype Assembly Problem on Multi-core Computers ..........................................................1437
Xiao Chen, Qinke Peng, and Libin Han
Imaginary Sequences of Impulse-Like Real-Part of Autocorrelation over 8-QAM+ Constellation ..........................................................1443
Fanxin Zeng, Xiaoping Zeng, Lingna Xiao, Zhenyu Zhang, and Guixin Xuan
Reliability Analysis of Energy-Efficient Parallel Storage Systems ..........................................................1448
Shu Yin, Kenli Li, Xiao Qin, Xiaojun Ruan, Haiquan Chen, Jiong Xie, and Xiaomin Zhu
VBIW: Optimizing Indirect Branch in Dynamic Binary Translation ..........................................................1456
Xiaochun Zhang, Xiang Gao, Qi Guo, Jing Huang, Hongwei Liu, and Xiaofu Meng

Session A19: Trust, Security, and Privacy
A Failure Recovery Solution for Transplanting High-Performance Data-Intensive Algorithms from the Cluster to the Cloud ..........................................................1463
Da-Qi Ren and Zane Wei
Hamid Reza Faragardi, Aboozar Rajabi, Reza Shojae, and Thomas Nolte
Load Balancing in Heterogeneous MapReduce Environments ..........................................................1480
Yuanquan Fan, Weiguo Wu, Depei Qian, Yunlong Xu, and Wei Wei
An Agent-Based Emergent Task Allocation Algorithm in Clouds ..........................................................1490
Chao Chen, Xiaomin Zhu, Weidong Bao, Lidong Chen, and Kwang Mong Sim
Parallel Map Matching on Massive Vehicle GPS Data Using MapReduce .................................................1498
   Jian Huang, Shaoqing Qiao, Haitao Yu, Jinhui Qie, and Chunwei Liu

Campus HPC Network Design and Monitoring ..........................................................................................1504
   Yvonne James, Violeta Holmes, and Daniel Munnings

High Performance Code Generation for Stencil Computation on Heterogeneous Multi-device Architectures ............................................................1512
   Pei Li, Elisabeth Brunet, and Raymond Namyst

QbDJ: A Novel Framework for Handling Skew in Parallel Join Processing on Distributed Memory .................................................................1519
   Long Cheng, Spyros Kotoulas, Tomas E. Ward, and Georgios Theodoropoulos

Performance Analysis of MPI Parallel Programs on Xen Virtual Machines ...............................................1528
   Jungang Xu, Yue Zhao, Kunlin Zhan, Hui Li, and Xiuqi Han

Real-Time Scheduling in MapReduce Clusters .........................................................................................1536
   Chen He, Ying Lu, and David Swanson

Accelerating Geospatial Applications on Hybrid Architectures ............................................................1545
   Chenggang Lai, Miaoqing Huang, Xuan Shi, and Haihang You

Parallel Set Determination and K-Means Clustering for Data Mining on Telecommunication Networks ............................................................1553
   Da-Qi Ren, Da Zheng, Guowei Huang, Shujie Zhang, and Zane Wei

Pattern Regulator for Wireless Body Sensor Networks ..............................................................................1558
   Lan Yao, Fuxiang Gao, and Ge Yu

Robust Spectrum Sensing for Small-Scale Primary Users under Low Signal-to-Noise Ratio ............................................................1566
   Yuan Jing, Li Ma, Peng Li, Ji Ma, and Bin Niu

Security and Data Accountability in Distributed Systems: A Provenance Survey .......................................1571
   Yu Shyang Tan, Ryan K.L. Ko, and Geoff Holmes

B. Sessions and Papers in TSP-13

The Fourth International Symposium on Trust, Security, and Privacy for Emerging Applications (TSP-13)

   Rene Mayrhofer

On Dynamic & Subjective Trust for Privacy Policy Enforcement in Cloud Computing ................................1585
   Karthick Ramachandran, Hanan Lutfiyya, and Mark Perry
A Practical Deployment Framework for Use of Attribute-Based Encryption in Data Protection .......................................................... 1593
  Zhiqian Xu and Keith M. Martin

Program Conversion for the Protection of Personal Information .......................................................... 1599
  Kuniaki Kuto, Kenichi Takahashi, Takao Kawamura, and Kazunori Sugahara

Analysis of Authentication and Key Establishment in Inter-generational Mobile Telephony .......................................................... 1605
  Chunyu Tang, David A. Naumann, and Susanne Wetzel

Recovering from a Lost Digital Wallet ................................................................................................. 1615
  Raja Naeem Akram, Konstantinos Markantonakis, and Keith Mayes

A Distributed Privacy-Aware Architecture for Communication in Smart Grids ........................................... 1622
  Christian Callegari, Sara De Pietro, Stefano Giordano, Michele Pagano, and Gregorio Procissi

Access Control to Prevent Attacks Exploiting Vulnerabilities of WebView in Android OS .......................................................... 1628
  Jing Yu and Toshihiro Yamauchi

BotCatch: A Behavior and Signature Correlated Bot Detection Approach ..................................................... 1634
  Yuede Ji, Yukun He, Qiang Li, and Dong Guo

An Anti-power Attacks Implementation of AES Algorithm in ASIC .......................................................... 1640
  Siyang Yu, Kenli Li, Yunchuan Qin, and Shaohua Tang

An Efficient Attack on a Fuzzy Keyword Search Scheme over Encrypted Data ............................................. 1647
  Minghui Zheng and Huihua Zhou

Development of a Fault Injection System to Test a Weather Station Based on Rapid Prototyping Platform .................................................................................................................. 1652
  Kleber Kruger and Fábio Iaione

C. Sessions and Papers IntelNet-13

The Fourth International Workshop on Intelligent Communication and Social Networks (IntelNet-13)

Neighbor Diversification-Based Collaborative Filtering for Improving Recommendation Lists .......................................................... 1658
  Chao Yang, Cong Cong Ai, and Ren Fa Li

Fuzzy Based Dynamic Load Management Policy for Wireless Sensor Networks .......................................................... 1665
  Prasenjit Chanak and Indrajit Banerjee

An QoS Algorithm Based on ACO for Wireless Sensor Network .......................................................... 1671
  Zhong Li and Qinghua Shi
A New DHT Supporting Multi-attribute Queries for Grid Information Services ...........................................1675
Yawei Zhao, Fei Cai, Junjie Xie, Lailong Luo, Xiaqiang Teng, Honghui Chen, and Weijie Kong

An Energy-Aware Ant Colony Optimization Routing Algorithm in the Private Network ..................................................................................................................1681
Guohong Kong, Hua Wang, Fuqiang Huang, Shanwen Yi, and Yaqing Wang

An Estimation of Distribution Algorithm for Steiner Tree Problem .................................................................1687
Yaqing Wang, Hua Wang, and Guohong Kong

**D. Sessions and Papers FHC-13**

**The Fourth International Workshop on Frontiers of Heterogeneous Computing (FHC-13)**

A Partners Assisted Virtual Machine Live Storage Migration for Intensive Disk I/O Workloads ..................................................................................................................................................1693
Xing Jin, Hongbo Wang, Jianjian Wang, Shiduan Cheng, and Jihan Li

An New Algorithm on Feature Selection with L-Norm PCA ..............................................................................1699
Xiaoping Fan, Zhijie Chen, and Zhifang Liao

A New Algorithm for Repairing Non-manifold Surfaces .....................................................................................1704
Yaoping Fei, Songqiao Chen, Dan Su, Jianping Luo, and Min Li

Use of Grammars and Machine Learning in ETL Systems That Control Load Balancing Process ............................................1709
Marcin Gorawski, Michal Gorawski, and Stanislaw Dyduch

Energy-Efficient Scheduling Algorithms for Data Center Resources in Cloud Computing ..................................................1715
Tamal Adhikary, Amit Kumar Das, Md. Abdur Razzaque, and A.M. Jehad Sarkar

LoGV: Low-Overhead GPGPU Virtualization ...........................................................................................................1721
Mathias Gottschlag, Marius Hillenbrand, Jens Kehne, Jan Stoess, and Frank Bellosa

LSoVC: A Framework for Taking Live Snapshot of Virtual Cluster in the Cloud ...............................................1727
Ruiqi Sun, Jie Yang, Zhan Gao, and Zhiqiang He

**E. Sessions and Papers EMCA-13**
The Third International Workshop on Embedded Multi-core Computing and Applications (EMCA-13)

Design and Implementation of Portable Multifunctional Data Acquisition Terminal ......................................................1733
   He Li, Ming Che, Jia Li, and Yan-Tao Shi

A Parallel Depth-Aided Exemplar-Based Inpainting for Real-Time View Synthesis on GPU ........................................1739
   Zheng Tian, Cheng Xu, and Xiaoyun Deng

Embedded Real-Time Application Prototyping Using a Hybrid Multiprocessing Platform ..................................................1745
   Weihua Sheng, Vitaliy Volevach, Rainer Leupers, and Gerd Ascheid

Performance Pattern of Unified Parallel C on Multi-core Clusters ..........................................................1751
   Nor Asilah Wati Abdul Hamid, Olivier Serres, Ahmad Anbar, and Sazlinah Hassan

Efficient GPU-Based Algorithm for Aligning Huge Sequence Database ........................................................1758
   Chun-Yuan Lin, Che-Lun Hung, and Jen-Cheng Huang

Towards High-Speed Real-Time HTTP Traffic Analysis on the Tilera Many-Core Platform ........................................1763
   Jing Xu, Hanbo Wang, Wei Liu, and Xiaojun Hei

DPAgg: A Dynamic Partition Aggregation on Multicore Processor in Main-Memory Database ....................................1769
   Dateng Hao and Li Sun

Filtering Strategy Research Based on BDS/DR Navigation System ..........................................................1778
   Jun Chen and Xiao-Fei Wu

Parallel Foreground Object Detection on a Polymorphous Computer ................................................................1784
   Yi Zhang, Tao Li, and Jungang Han

Positive Handling the Low-Criticality Tasks in Mixed-Criticality Scheduling on Multiprocessors ..................................1790
   Long Li, Lida Huang, Renfa Li, Renfei Wu, and Yong Xie

F. Sessions and Papers ESCAPE-13
The Third International Workshop on Extreme Scale Computing Application Enablement - Modeling and Tools (ESCAPE-13)

CCSU: Research on the Compression Coding of Supporting Data Update Completely .................................................................1796
  Bing Wang, Xianfeng Liu, Zhenxi Lei, and Gaocai Wang

Compression XML Encoding Scheme of Supporting Updating Data Completely .........................................................1802
  Zhenxi Lei, Xianfeng Liu, Zhou Zhou, and Gaocai Wang

Multi-GPU Acceleration for Smart Grid Data Compression ...........................................................................................................1808
  Zhi-Hung Chen and Che-Rung Lee

Group Scheduling for Improving Both CPU and Memory Power Efficiency Simultaneously ...........................................................1814
  Gangyong Jia, Xi Li, Jian Wan, Chao Wang, and Dong Dai

Impact Evaluation on Cultural Tourism Resources Development Based on a Multi-index Integrated Entropy Weight Method .................................................................1820
  Zhang Liu and Chen Feihu

G. Sessions and Papers HPTC-13

The 2013 International Workshop on High Performance and Transparent Computing (HPTC-13)

Performance Analysis of 802.11 Broadcast Channel Access Based on Finite Queue and Markov Chain .................................................................1826
  Zheng Liu, Sanfeng Zhang, Yi Ji, and Minjie Xu

Analysis on the Scheduling Problem in Transparent Computing ...........................................................................................................1832
  Ren Ju, Zhang Yaoxue, and Chen Jianer

  Wei Liang, Yonghua Xiong, and Min Wu

Shared Resource and Service Management for Mobile Transparent Computing ...........................................................................................................1846
  Yonghua Xiong, Suzhen Huang, and Min Wu

SPRNT: An Aggressive Approach to Dynamically Schedule Resources with Limited Service Failure in VM-Based Data Centers .................................................................1854
  Jinzhao Liu and Yuezhi Zhou

Instant Bug Testing Service for Linux Kernel .................................................................................................................................1860
  Yu Chen, Fengguang Wu, Kuanlong Yu, Lei Zhang, Yuheng Chen, Yang Yang, and Junjie Mao
CASH: A Context-Aware Scheduling for Hypervisor Based on KSM .....................................................1866
Lei Zhang, Yaozu Dong, and Yu Chen

A Cross Layer Design for Improving Trivial File Transfer Protocol in Mobile Transparent Computing ..........................................................................................................................1872
Juan Li, Wang Yang, and Guojun Wang

NFS Protocol Performance Analysis and Improvement for Mobile Transparent Computing .................................................................1878
Shaoming Guo, Wang Yang, and Guojun Wang

Wireless Multicast for Mobile Transparent Computing ..........................................................................................................................1884
Huanying Yin, Wang Yang, and Guojun Wang

Energy-aware framework for virtual machine consolidation in Cloud computing ................................................1890
Zhibo Cao and Shoubin Dong

Combining Program Analysis and Empirical Search to Optimize Programs .................................................................1896
Pingjing Lu, Bao Li, Zhengbin Pang, Ying Zhang, and Shaogang Wang

A MapReduce Computing Framework Based on GPU Cluster ..................................................................................1902
Heng Gao, Jie Tang, and Gangshan Wu

VCE-PSO: Virtual Cloud Embedding through a Meta-heuristic Approach .................................................................1908
Chunguang Wang, Qingbo Wu, Yusong Tan, Deke Guo, and Quanyuan Wu

The Synchronization Treatment in Implementing Data-Parallel Programming Languages on CPUs ........................................................................1916
Feng Yue, Jianmin Pang, Rongcai Zhao, and Chao Dai

Profit-Oriented Scheduling Optimization for Workflow in Clouds ........................................................................1922
Haoran Ji, Weidong Bao, Xiaomin Zhu, and Shu Yin

Swarm Communication - A Messaging Pattern Proposal for Dynamic Scalability in Cloud ........................................................................1930
Lenuta Alboaie, Sinica Alboaie, and Andrei Panu

AEP - Automatic Exchange of Embedded System Software Parameters .................................................................1938
Rita De Cássia Cazu Soldi and Antônio Augusto Medeiros Fröhlich

Fast Sparse Signal Approximation Via Matching Pursuit .............................................................................................1944
M.J. Wang, W.D. Yu, and Y. Wang

H. Sessions and Papers NOPE-13
The 2013 International Workshop on Network Optimization and Performance Evaluation (NOPE-13)

Finding Heavy-Hitter by Periodically Deleting Small Flows .................................................................1948

Lili Wang, Weijiang Liu, and Shanshan Liu

Parallel Computation Efficiency Analysis of Numerical Simulation of Copper Flash Smelting Furnace ..........................................................................................................................1953

Qing Wu, Yang Dai, Jun Chen, and Zhuo Chen

Improved Block Kalman Filter for Degraded Image Restoration ...................................................................1958

Cui Liu, Ying Zhang, Haoqian Wang, and Xingzheng Wang

A Sensitivity Adjustment for Tunable Antenna Using Predictive Data .........................................................1963

Wataya Akira, Yamane Takeshi, Takahashi Kenichi, Kawamura Takao, and Sugahara Kazunori

A Data Gathering Scheme for WSN/WSAN Based on Partitioning Algorithm and Mobile Sinks ....................................................................................................................................1968

Xiangli Zhang, Hanrong Bao, Jin Ye, Kun Yan, and Hongmei Zhang

I. Sessions and Papers in EUC-13

The 11th IEEE/IFIP International Conference on Embedded and Ubiquitous Computing (EUC-13)

Session I1: Embedded System Software and Optimization

An Effective Synchronization Cost Reduction Approach ......................................................................................1974

Omar Kermia and Ramdane Kechad

Deduplication with Block-Level Content-Aware Chunking for Solid State Drives (SSDs) ............................................................1982

Jin-Yong Ha, Young-Sik Lee, and Jin-Soo Kim

Run-Time Reconfiguration to Tolerate Core Failures for Real-Time Embedded Applications on NoC Manycore Platforms ..................................................................................................1990

Zheng Li, Shuhui Li, Xiyu Hua, Hao Wu, and Shangping Ren

Cost Model Based Analyses on Performance Effects of Loop Transformations in Block Associative Sector Translation ........................................................................................................1998

Joon-Young Paik, Tae-Sun Chung, and Eun-Sun Cho

An Efficient Fault Recovery Algorithm in Multiprocessor Mixed-Criticality Systems ..............................................2006

Guangdong Liu, Ying Lu, and Shige Wang

Bootless Boot: Reducing Device Boot Latency with Byte Addressable NVRAM ..................................................2014

Dokeun Lee and Youjip Won
Exclusive Memory Scheduling for Multimedia MPSoC ...............................................................2022
Su Liu, Menghao Su, Ruiyang Wu, and Lei Li

Session I2: Real-Time Systems and Operating Systems
A Workload Model Based Approach to Evaluate the Robustness of Real-time Operating System ......................................................................................................................207
Zhengmao Zhou, Yun Zhou, Ming Cai, and Lei Sun
A Cross-Domain System Architecture for Embedded Hard Real-Time Many-Core Systems ..........................................................................................................................2034
Christian Bradatsch, Florian Kluge, and Theo Ungerer
Ratio-Based Aggressive Reclaim Algorithm for Mixed Task Sets ............................................2042
Chin-Fu Kuo

Session I3: Sensor Networks
Search-Based Parameter Tuning on Application-Level Load Balancing for Distributed Embedded Systems ..................................................................................................................2050
Ipek Caliskanelli and Leandro Soares Indrusiak
Component-Based Localization for Wireless Sensor Networks Combining Angle and Distance Information .......................................................................................................................2058
Weitao Hu, Jianxin Wang, and Shigeng Zhang
An Algorithmic and Systematic Approach for Improving Robustness of TOA-Based Localization .....................................................................................................................2066
Yongcai Wang and Lei Song
Mend Barrier Gaps via Sensor Rotation for a Line-Based Deployed Directional Sensor Network ..........................................................................................................................2074
Jiaoyan Chen, Bang Wang, Wenyu Liu, Xianjun Deng, and Laurence T. Yang

Session I4: Reconfigurable Computing Systems and Cyber-physical Systems
Device View Redundancy: An Adaptive Low-Overhead Fault Tolerance Mechanism for Many-Core System ..................................................................................................................2080
Wentao Jia, Chunyuan Zhang, and Jian Fu
Low Energy Mapping Techniques under Reliability and Bandwidth Constraints ......................2088
Andrea Mineo, Marina Masi, Maurizio Palesi, Giuseppe Ascia, and Vincenzo Catania
Requirement Analysis Method for Vehicular Cyber Physical Systems .........................................2096
Lichen Zhang
Aspect-Oriented Modeling of Railway Cyber Physical Systems Based on the Extension of AADL .................................................. 2104

Lichen Zhang

Overview Mobile Social Networking in Proximity (MSNP): Applications, Characteristics and Challenges .................................. 2112

Yufeng Wang, Tang Jing, Qun Jin, and Jianhua Ma

Session I5: Pervasive Computing and Communications

A Nonintrusive and Single-Point Infrastructure-Mediated Sensing Approach for Water-Use Activity Recognition ................................................................. 2120

Lisha Hu, Yiqiang Chen, Shuangquan Wang, and Liping Jia

Participation-Aware Incentive for Active Crowd Sensing .......................................................... 2127

Niwat Thepvilojanapong, Kai Zhang, Tomoya Tsujimori, Yoshikatsu Ohta, Yunlong Zhao, and Yoshito Tobe

An Intensive Location-Aware Framework for Device-Involved Human Tasks ........................................ 2135

Yuqiong Xu, Shijian Li, Zhaozhi Wu, and Gang Pan

Mo-Fi: Discovering Human Presence Activity with Smartphones Using Non-intrusive Wi-Fi Sniffers ................................................................. 2143

Weijun Qin, Jiadi Zhang, Bo Li, Hongsong Zhu, and Yuyan Sun

CRSM: Crowdsourcing Based Road Surface Monitoring ................................................................. 2151

Kongyang Chen, Mingming Lu, Guang Tan, and Jie Wu

Interference-Resistant Heading Measurement for Location-Based Mobile Services ................................................................. 2159

Jing Wu, Bo Xie, Kongyang Chen, Guohun Zhu, and Guang Tan

SmartProfile: A Context-Aware Mobile Personalization System ................................................................. 2166

ScreenLock: A Smart Display Management System for Smartphones ................................................................. 2174

Context-Aware Collector ................................................................. 2181

Session I6: Mobile Internet Computing and Peer-to-Peer Computing

Development of a Health Information System in the Mobile Cloud Environment ........................................2187

Au Thien Wan and Suresh Sankaranarayanan

Mining Mechanism of Top-k Influential Nodes Based on Voting Algorithm
in Mobile Social Networks ..........................................................................................................................2194

Sancheng Peng, Guojun Wang, and Shui Yu

A Robust Image Registration Algorithm for HDR Imaging on Feature Phone Platforms .................................................................................................................................................2200

Qiwei Xie, An Jiang, Qian Long, Seiichi Mita, and Xi Chen

Random Walk Based Inverse Influence Research in Online Social Networks ........................................2206

Zhaoyan Jin, Quanyuan Wu, Dianxi Shi, and Huining Yan

Research on Model Based Embedded Display Control Technology .......................................................2214

Jingyu Cao, Weiyan Chai, Long Peng, and Yonghong Guo

Session I7: Multimedia and Human-Computer Interaction

A Perception-Based Rate Control Algorithm for H.264/AVC .................................................................2219

Mingzhu Chen, Xingming Zhang, Yubei Lin, and Shaoxin Zhan

Friendship Prediction Based on the Fusion of Topology and Geographical Features in LBSN .................................................................2224

Hui Luo, Bin Guo, Zhiwenyu, Zhu Wang, and Yun Feng

Cursive Style Korean Handwriting Synthesis Based on Shape Analysis with Minimized Input Data .................................................................................................................................2231

Suyun Ju and Jungpil Shin

Usability and Security of the Recall-Based Graphical Password Schemes .............................................2237

Haichang Gao, Ning Liu, Kaisheng Li, and Jinhua Qiu

Session I8: Wireless Communication & Networks

A Convex Hull Based Optimization to Reduce the Data Delivery Latency of the Mobile Elements in Wireless Sensor Networks .................................................................2245

Ronghua Xu, Hongjun Dai, Fengyu Wang, and Zhiping Jia

Placement of Access Points for Indoor Wireless Coverage and Fingerprint-Based Localization .................................................................................................................................................2253

Qiuyun Chen, Bang Wang, Xianjun Deng, Yijun Mo, and Laurence T. Yang

Indoor Location Search Based on Subarea Fingerprinting and Curve Fitting ........................................2258

Shengliang Zhou, Bang Wang, Yijun Mo, Xianjun Deng, and Laurence T. Yang

An Ns-2 Module for Simulating Passive RFID Systems .........................................................................2263

Rafael Perazzo Barbosa Mota and Daniel M. Batista
A Multi-channel Routing Protocol for Dual Radio Wireless Networks ....................................................2271
Yunlong Zhao, Hao Wang, Yang Li, and Hongtao Song

Session I9: Distributed Computing and Applications
AMD Based Service Agent Collaboration and Specification .................................................................2277
Liwei Zheng
Web Service QoS Prediction under Sparse Data via Local Link Prediction ........................................2285
Junjie Tong, E. Haihong, Meina Song, Junde Song, and Yanfei Li
NCluster: Using Multiple Active Name Nodes to Achieve High Availability
for HDFS .................................................................................................................................................2291
Zhanye Wang and Dongsheng Wang
SNKC: An Efficient On-the-Fly Pollution Detection Scheme for Content Distribution with Network Coding .................................................................................................................................................2298
Junsheng Wang, Jin Wang, Yanqin Zhu, and Kejie Lu

J. Sessions and Papers in MMASN-13

The Second International Workshop on Mobile, Multimedia, Ad Hoc, & Sensor Networks (MMASN-13)

Session J1: Mobile, Multimedia, Ad Hoc, & Sensor Networks
QoS of Mobile Real-Time Streaming Adapted to Bandwidth .................................................................2306
Jingliang Chen and Xingming Zhang
A QoC Based Method for Reliable Fusion of Uncertain Pervasive Contexts .........................................2311
Di Zheng, Jun Wang, and Ben Kerong
Object Tracking Based on the Prediction of Trajectory in Wireless Sensor Networks ................................2317
Yiwen Shen, Kyung Tae Kim, Jong Chang Park, and Hee Yong Youn
A K-NN and Sparse Representation Based Method for Gesture Recognition .........................................2325
Meifang Zeng, Ling Xiao, and Renfa Li
A Self-Adaptive QoE Streaming Service Integrated on Cloud Mobile Network ....................................2330
Chin-Feng Lai, Man Lin, Shih-Yeh Chen, Han-Chieh Chao, and Shin-Feng Lin

K. Sessions and Papers in IOTC-13
The 2013 International Workshop on Internet of Things and Transparent Computing (IOTC-13)

Session K1: Internet of Things and Transparent Computing

A Delay Constrained Two-Hop Relay Algorithm for Transparent Computing in MANETs .................................................................2337
   Yujian Fang, Yuezhi Zhou, Xiaohong Jiang, and Xiaochun Wang

The Method to Resolve Schema Discrepancy of a Heterogeneous Database System ..........................................................................................................................2342
   Du Wei and Zou Xianxia

Android Power Management and Analyses of Power Consumption in an Android Smartphone ...........................................................2347
   Ge Bai, Hansi Mou, Yinhong Hou, Yongqiang Lyu, and Weikang Yang

Applying Graph theory to the Internet of Things ..........................................................................................................................2354
   Bing Yao, Xia Liu, Wan-Jia Zhang, Xiang-En Chen, Xiao-Min Zhang, Ming Yao, and Zheng-Xue Zhao

L. Sessions and Papers in DMIOT-13

The 2013 International Workshop on Data Mining in Internet of Things

Session L01: Data Mining in Internet of Things

User Interest Profile Identification Using Wikipedia Knowledge Database ..................................................................................2362
   Huakang Li, Longbin Lai, Xiaofeng Xu, Yao Shen, Xiangyang Xu, and Chunrong Xia

A Study on Algorithm for Mining Subgraph in Thinking Maps .................................................................................................2368
   Bin Zeng, Feng Tian, Boqin Feng, Qinghua Zheng, Fan Wu, and Yan Fu

A New Clustering Algorithm for Sensor Data Streams in an Agricultural IoT ................................................................................2373
   Mingze Wu, Yitong Wang, and Zhicheng Liao

Analysis on Topic Map Oriented E-Learner Behavior and Study Efficiency ................................................................................2379
   Hongying Bao, Haiping Zhu, Jun Liu, Feng Tian, and Yan Chen

A Rate Adaptation Solution for Distance Education System over HTTP Streaming ...............................................................................2385
   Bin Li, Qinghua Zheng, and Weizhan Zhang

Author Index
