22nd International Conference on
FLUID SEALING
Düsseldorf, Germany: 3rd – 4th December 2013

CONTENTS

FOREWORD 1

KEYNOTE ADDRESS 3
HydraLeaks? Meeting the changing perceptions of fluid power equipment in earthmoving machinery
H Narotham, JCB Excavators Ltd, UK

GENERAL 7
Regulations motivate low-emissions sealing – a summary of world air pollution rules and USA leak detection and repair
J Drago, Garlock Sealing Technologies Palmyra, USA

Sealing solutions for water hydraulic actuators in the sanitary valve industry
M Fairhurst, R Collins, BHR Group, UK

Nanostructured tungsten carbide coating improves seal life in abrasive applications and enables high temperature seals
Y N Zhuk, Hardide plc, UK

The Flexitallic Change Gasket: A new semi metallic gasket configuration to improve bolted joint connections
S Bond, The Flexitallic Group, USA

Introduction to BFPA/P112 ‘Guidelines on seals for fluid power applications including care and handling’
N A Peppiatt, Hallite Seals International Ltd, UK
MECHANICAL SEALS

Heat transfer analysis in two-side heat transferring mechanical seals using straight fin theory
P Song, F Zhang, W Chan, Kunming University of Science and Technology, China

Use of carbon based coatings to enhance mechanical seal performance
C H Walker, Diamond Hard Surfaces Ltd, UK

RECIPIROCATING SEALS

An experimental study on hydrodynamic film formation of reciprocating seals
K Yoshimura, N Suzuki, H Mizuta, NOK Corporation, Japan

Model based surface topography design of pneumatic applications for improved friction properties
M Wangenheim, M Zimmermann, Leibniz Universität Hannover; A Hermann, Freudenberg Sealing Technologies (FST) GmbH & Co. KG, Germany

ROTARY SHAFT LIP SEALS

Investigation into contact band characteristics of rotary radial lip seals in relation to various operating parameters
M-A Matzakou, P Bowman, James Walker & Co. Ltd, UK

Investigations into protective seals for ball bearings
K Ottink, G W G Poll, Leibniz Universität Hannover, Germany

Revisiting soft micro-elastohydrodynamic lubrication: A FEM-based multi-scale approach for modeling radial lip seal friction
B Wennehorst, G W G Poll, Leibniz Universität Hannover, Germany

Evaluation of the surface texture of sealing counterfaces for radial lip seals based on 3D surface parameters
C Fehrenbacher, F Bauer, W Haas, University of Stuttgart; M Narten, Renk AG, Germany

Comprehensive lead analysis of shaft counterfaces for the tribological system radial lip seal
M Baumann, F Bauer, W Haas, University of Stuttgart, Germany
