Sustainable Engineering
Forum 2013

Core Programming Area at the 2013 AIChE Annual Meeting:
Global Challenges for Engineering a Sustainable Future

San Francisco, California, USA
3 – 8 November 2013

ISBN: 978-1-63439-056-9
TABLE OF CONTENTS

(29a) Economic Evaluation of Freshwater Conservation Strategies for Thermoelectric Power Plants ................................................................. 1
  Michael E. Walker, Ranjani B. Theregowda, Iman Safari, Javad Abbasian, Hamid Arastoopour, David A. Dzombak, Ming-Kai Hsieh, David C. Miller

(29b) Modeling Of Pollutant Transport in the Nile Delta, Egypt ................................................................................................................................................. 2

(29c) Evaluation of RO Concentrate Treatment for High Recovery Desalting of High Salinity Inland Brackish Water ......................................................... 3
  Mohamed Mostafa, Robert W. Peters

(29d) Simulation and Sustainability Analysis for Produced Water Thermal Desalination Technologies ................................................................. 4
  Livern Chen, Helen H. Lou

(29e) Dispatching Electricity Generation to Increase Water Availability in Times of Drought: A Feasibility Study in Texas ........................................................................................................ 5
  Adam Pacci

(29f) A Novel Method to Manage the Concentrate Disposal of Desalination Units ................................................................................................. 7
  Saeid Aghahossein Shirazi, Alireza Saraeian, Jalal Rastegary, Abbas Ghassemi

(32a) Overview Of Materials In The Built Environment .................................................................................................................................................. 8
  Ron Judkoff

(32b) Energyplus Model-Based Predictive Control (EPMPC) Using Matlab/Simulink and Mle+ ............................................................................. 9
  Jie Zhao, Khue Poh Lam, B. Erik Ydstie

(32c) The Sol-Char Toilet: Concentrated Solar Power Transformed By Fiber Optics for Pyrolysis of Human Waste to Biochar ...................................... 10

(32d) Building-Integrated Active Modular Phytoremediation System ............................................................................................................................... 11
  Anna Dyson, Aby Aysogan Aksel, Jason Volden, Marianne Nyma, Jeffrey Bird

(32e) Integrating Technological and Ecological Design for Sustainable Buildings On a University Campus .......................................................... 12
  Erin L. Gibbenevey, Bhargv R. Bakshi

(32f) Energy Conservation Approach to Cooling Process By Employing Preheat Tank and Chilled Water Tanks ......................................................... 14
  Dr. Robert W. Peters, Zhao Li

(32g) Operation of Residential Hybrid Renewable Energy Systems: Integrating Forecasting, Optimization and Demand Response.............................. 15
  Xianuon Wang, Nuel H. El-Farar, Ahmet Pahzoglu

(36a) Green Chemistry, Green Engineering, Green Economy At US EPA ‘s Sustainable Technologies Division ................................................................. 17
  John Leazer

(36b) Sustainability Practice in Industry .................................................................................................................................................................................. 18
  Joseph B. Powell

(36c) Green Engineering and Sustainability in the Chemical Engineering Curriculum ........................................................................................................... 19
  David R. Shonnard, David T. Allen, Nhan Nguyen, Sharon Austrin

(36d) Driving Private Sector Adoption of Greener Processes and Technologies ........................................................................................................ 20
  Abby Lindsay

(36e) Minimization of the GHG Emissions At the Macroeconomic Level Via a Multi-Objective Input-Output Approach: A Case Study of the EU-25 Economy ......... 21
  Daniel Cortes, Antonio Ruiz-Hernandez, Gonzalo Guillen-Gosadlber, Maria Llop, Roger Guimer, Marta Sales-Pardo

(36f) Economic Analysis and Optimization of Carbon Capture Storage Pipeline Transport Network System ................................................................. 23
  Seungkyu Dan, Byung Joon Kang, Seonghyun Cho, En Sup Yoon

(36g) Economic Development Through Entrepreneurship and Technology Innovation: Bringing Together Industry, Academia, and Government ...................... 24
  Nata Marie Anid

(37a) The Carbon Capture Simulation Initiative (CCSI): Computational Tools To Accelerate Commercial Development ......................................................... 25
  David C. Miller

(37b) The Four Dimensional Product: Integration Over Time Is the Only Way to Understand Sustainability ................................................................................ 26
  William Banholzer, Mark E. Jona

(37c) Maximization of Energy Efficiency of a Combined Heat and Power Plant ........................................................................................................... 27
  Thomas F. Edgar, Kody Powell, Jong Kim, Kriti Kapoor

(37d) Pan American Issues on Biofuel Sustainability ...................................................................................................................................................... 28
  David R. Shonnard

(50a) Crosslinked Anion Exchange Membranes for Redox Flow Batteries .................................................................................................................... 29
  Min-Suk Jung, Janvier Parrondo, Christopher Arges, Vijay Ramani

(50b) Challenges to Implementation of High-Rate Energy Storage in Military Applications ....................................................................................................... 30
  John Heinzel, Jason Ostanek, Donald Hoffman, Ian Peak

(50c) Novel Pt/TixM1-xO2 Nanocatalysts for Fuel Cells ......................................................................................................................................................... 31
  Bing Joe Hwang, Van Thi Thanh Ho, Chun-Jern Pan, Wei-Nien Su
(50d) A Tunable Hierarchical Porous Carbon Structure for Studying Electrochemical Energy Conversion ........................................32
Kwong-Yu Chan, Chuan Chen, Yanie Yan

(50e) High-Performance Electrodes for Hydroxide Exchange Membrane Fuel Cells .........................................................35
Robert B. Kaspar, Michael Letterio, Kurt Jensen, Shuang Gu, Yuhan Yan

(50f) Capacitive Mixing in Porous Electrodes for Energy Production .........................................................................................36
Jorge F. Gabitto, Costas Tsouris

(50g) Sustainability Metrics For Biofuel Production Process Design .....................................................................................37
Abigail S. Engelberth, Nathan Moister

(50h) Novel Framework To Examine Sustainability Of Biorefining Processes .................................................................38
Samesh Sukumar, Dr. Jeffrey Seay

(50i) Case Studies For Sustainable Process Development In Biotechnology and Engineering Industry ................................39
Norman E. Sammons

(65a) Templated Ordered Mesoporous Materials for Supercapacitors and Lithium Ion Batteries .....................................40
Jinwoon Lee

(65b) Reduced Graphene Oxide Wrapped FeS Nanocomposite for Lithium-Ion Battery Anode With Improved Performance .................................................................................................................41
Ling Fei, Hongmei Luo

(65c) Alkane-thiol-Passivated Germanium Nanowires As High-Performance Anode Materials for Lithium-Ion Batteries ........................................................................................................................................42
Hsing-Yu Yuan, Fang-Wei Yuan

(65d) A Facile Microwave-Assisted Route to Co(OH)2 and Co3O4 Nanosheet for Li-Ion Battery ...........................................43
Gen Chen, Hongmei Luo

(65e) Li Adsorption and Intercalation in Graphene, Graphite and Carbon Onions By Reaxff Reactive Force Field ..........44
Pragya K. Dixit, Paramvir R. Ghees, Paul R. C. Kita, Sidd C. T. Yan Duan

(65f) Silicon-Rich Carbon Nanofibers From Water-Based Spinning to Control Combination of Silicon and Carbon for Li-Ion Battery ........................................................................................................................................45
Yong L. Joo, Yong Seok Kim, Kyung Woo Kim, Daehwan Cho, Nathaniel S. Hansen

(65g) Electrochemical Properties of Carbon-Coated SnO2-Graphene Nanocomposites for Rechargeable Lithium-Ion Batteries .................................................................................................................46
Mahbuba Ara, Dr. Steven Salley, Simon K. Y. Ng

(65h) Multilayer Hybrid Electrodes of TiO2/Mwnt for Electrochemical Applications ..........................................................47
Md. Nasim Hyder, Reza Kavian, Yang Shao-Horn, Paula T. Hammond

(65i) Facile Preparation of Mesoporous MnO Nanowires With Unique Cocoon-Like Hollow Nanostructure for Reversible Lithium Ion Storage ......................................................................................48
Jian Zhu, K. Y. Simon Ng, Da Deng

(75a) DOE Efforts To Accelerate Deployment and Commercialization of Advanced Biofuels ...............................................49
Brian Duff

(75b) Advanced Hardwood Biofuels Northwest – A Multidisciplinary Research Program To Produce Sustainable Biofuels From Woody Biomass .....................................................................................50
Rick Gustafson

(75c) Lanzatech Projects and Technology for Advanced Biofuels and Chemical Co-Products ..............................................51
Michael A. Schulze, Derek W. Griffin

(75d) Cost Competitive Cellulosic Ethanol: The National Renewable Energy Lab’s Perspective ...........................................52
Adam Brats

(82a) A Novel Fast Pyrolysis Model Based On Variable-Power Image Furnace Results .......................................................53
Gaullain Mauvetel, Melina Christodoulou, Jacques Lede, Francis Billard

(82b) Modeling Biomass-to-Fuels Processing ..........................................................................................................................55
Brian M. Moreno, Michael T. Klein

(82c) Global Kinetics for the Simulation of Biomass Pyrolysis in Fluidized Bed Reactors ...................................................56
Perrine Pepiot, Kara Malhotra, Peter N. Ciesielski, Ray Grout, Mark Nimlos

(82d) An Open-Source Code for Simulating Biomass Pyrolysis in Fluidized-Bed Reactors ....................................................57
Qing Wang, Song-Chang Kong

(82e) Development of a Plug-Flow Reactor For Direct Hydrothermal Liquefaction of Algae and Livestock Waste ...............58
Mitchell James Minarick

(82f) Depolymerization of Lignin During Solvent Liquefaction .............................................................................................59
Kwang Ho Kim, Matthew Kiefert, Xi Lang Bai, Robert Brown

(82g) What Can We Learn About Fast Pyrolysis of Lignin From Solvent Liquefaction? ............................................................60
Robert Brown, Xi J. Lai, Kwang Ho Kim, Matthew Kiefert

(101a) Advanced Treatment of Shale Gas Frac Water to Produce NPDES Quality Water ..................................................61
Robert S. Dahlin, Bill Chatterton, Behrang Paekadeh, Austin Vailancourt

(101b) Recovering/Reuse of Sodium Chloride from Zero Discharge Desalination Concentrate Streams ........................63
Alemayehu Yetayew, Lucy Mar Camacho, Malynda A. Cappelle, Tom Davis

(101c) Advances in Electrosorption By Mesoporous Carbon Materials for Water Desalination .........................................64
Kwdrk Sharma, Richard T. Mayes, Jim Kiggans, Sorita Yiacoumi, David W. Depazol, Sheng Dai, Costas Tsouris

(101d) Evaluation of Ceramic Membrane Filtration for the Removal of Dpb Precursors From Surface Water Supplies ........................................................................................................................................65
Alexander P. Mathew, Steven Fann, Leslie Mauermann

(101e) Efficacy of Membrane Bioreactor Process Combined With Advanced Oxidation Processes for Organic Removal in Water Reclamation and Reuse ..............................................................................66
Woonhoe Kim, Varadarajan Ravindran, Massoud Pirbazar
(192f) Microfabricated Nickel Oxide Supercapacitors Based On High Aspect Ratio Concentric Cylindrical Electrodes ........................................................................................................................................................................................................142
Andac Armathut, Sue Ann Bidstrup, Allen, Mark G. Allen

(192g) Pretreatment Effects On Charge Storage of Early Transition-Metal Carbides and Nitrides ..........................143
Abdoulaye Djire, Priyanka Pande, Alice E. S. Sleigh, Aniruddha Deh, Paul G. Rasmussen, James Penner-Hahn, Levi T. Thompson

(192h) Doped Transition Metal Oxide Composite Electrodes For Supercapacitor Applications ..........................146
Prashanth Sampani Hamanatha, Karan Kadakia, Da H. Hong, James Poston, Manivasan Ayyakannu, Prashant N. Kumta

(192i) Novel 3-D MnO2/Holey Graphene Nanostructure for Supercapacitor Applications With Enhanced Electrochemical Performances ........................................................................................................................................................................................................147
Lixin Wang, Tiejun Meng, Mahabba Ara, Da Dong, Simon Ng

(192j) Electrochemical Energy Storage Of Magnetic Carbon Nanocomposites: Role of Magnetocapacitance and Magnetohydrodynamics ........................................................................................................................................................................................................148
Jiahua Zhu, Saying Wei, Zhanhu Guo

(192k) Synthesis and Characterization of Orange Peel As Electrodes in Li-Ion Capacitors ..................................149
Ararat Andreas Arie

(198a) Biomass Resources and Current Status Of Biofuels In China ........................................................................150
Zhenhong Yuan

(198c) Air Quality Impacts of Natural Gas Production and Use ..................................................................................152
David T. Allen

(198d) Disasters Risks Reduction and Sustainable Development .............................................................................153
Kenza Robinson

(197f) Formation of Pyrolytic Lignin During Fast Pyrolysis of Biomass ................................................................154
Kwang Ho Kim, Xianglan Bai, Eric Dalluge, Carolyn Hutchinson, Dustin Dalluge, Young Jin Lee, Robert Brown

(207a) Time-Resolved Fast Pyrolysis Using a Free-Fall Reactor and a Time-of-Flight Mass Spectrometer ............155
Patrick Johnston, Preston Gable, Robert Brown

(207b) The Nature of Torrefaction Effect On Producing High-Quality Fuel Intermediate Via Fast Pyrolysis ........156
Jiajia Meng, Junyeong Park, Andrew Moore, David Tilotta, Sushil Adhikari, Steve Kelley, Sukjuan Park

(207c) Upgrading of Biomass Pyrolysis Vapor ................................................................................................................157
Mark R. Timms, Kristina Ilaa, Calvin Muharkate, David Bohachaud, Mark W. Jarrn, Mark W. Jarrn

(207d) Catalytic Pyrolysis of Torrefied Biomass Using Different Acidic Zeolites .........................................................158
Sushil Adhikari, Vaihwson Srinivasan, Sukhu Park

(207e) Hydrogen From Acetic Acid As the Model Compound of Bio-Oil Over Ni/Ce-Zr-O Catalyst ..........................159
Changfeng Yan

(207f) Separations of Organic Acids From Pyrolysis Bio-Oil .......................................................................................160
Yupo J. Lin, Norman Sather, Joseph Libera, Seth Snyder

(226a) New Developments on Membranes for CO2 Separation and Capture .........................................................161
Yunsin Chen, Karthik Ramanabramian, Michael A. Severance, Zi Tong, Yaron Yakharia, Lin Zhao, Yuan Zhao, Prabh K. Dutta, W. S. Winston Ho

(226b) Organic Solvent Nanofiltration Molecular Separations In Organic Liquids ..................................................162
Andrew G. Livingston

(226c) Sustainability Issues in Membrane Systems for Bioprocessing .................................................................163
Andrew L. Zdienes

(226d) Membrane Separations As "Lever" Points in Biomass-Based Processes .....................................................164
John Pellegrino

(155e) progresses in Membrane Integrated Systems for Water, Energy and Raw Materials Production ..............165
Enrico Drioli, Tai-Shung Chang, Francesca Macedonio

(225a) Fundamental Developments and Economic Feasibility of AOPs Involving Ultrasound for Environmental Remediation ........................................................................................................................................................................................................166
Yusuf G (Debo) Adewuyi, Dr. Robert W. Peters

(225b) Advanced Oxidation of Estrone in Water and Wastewater ..............................................................................167
Shubhajit Sarkar, George Naklha, Madhumita B. Ray

(225c) Analysis of Ozone Absorption and Reaction Kinetics in the Oxidation of Organics in Effluents in a Stirred Tank Reactor ........................................................................................................................................................................................................168
Alexander P. Matthews, Kishorda K. Panda

(225d) Electrochemical Wastewater Treatment: Applications and Scale-Up ..............................................................169
Dietrich Wieselschlag, Matthias Siebenhofer

(225e) Case Study - In-Situ Oxidation of Ground Water Contaminated By Petroleum Hydrocarbons, Acetone and Chlorinated Hydrocarbons At a Former Industrial Facility in Northern California ........................................................................................................................................................................................................170
Riffat Maqbool Qadir

(225f) Engineering Challenges of Implementing the Peroxone Process for in-Situ Oxidation of Ground Water Contaminated By Acetone and Petroleum Hydrocarbons At a Former Industrial Facility ........................................................................................................................................................................................................171
Riffat Maqbool Qadir

(225g) Heterogeneous Fenton Oxidation of Synthetic Dye in Water With Surface-Modified Iron-Amended Activated Carbon ........................................................................................................................................................................................................172
Jihyun R. Kim, Branden Santosano, Hyosang Kim, Eunsang Kwon

(225h) Reaction Kinetics and Mechanistic Studies of Nitric Oxide Removal By Combined Aqueous Persulfate and Ferrous-EDTA Systems ........................................................................................................................................................................................................173
Yusuf G (Debo) Adewuyi, Md Arif Khan
(225i) Sonication Treatment of Sump Water Containing Diesel Fuel
Dr. Robert W. Peters, Rosanne Bessette
.........................................................................................................................175

(225j) UV-Based Treatment of Fluoroquinolone Antibiotics in Wastewater
Sebastian Snowberger, Kevin He, Lee Blaney
.........................................................................................................................176

(227) Targeted Proteomics for the Optimization of Biofuel Pathways in E. Coli
Chris Petzold
.........................................................................................................................177

(227b) Increasing C6 Cell Wall Sugar Content By Engineering the Accumulation of a Low Recalcitrance
Polsaccharide in Plants
Miguel Vega-Sanchez
.........................................................................................................................178

(227c) Predicting Kamlet-Taft Parameters Using Quantum Chemical Descriptors
Parthasarathi Ramakrishnan
.........................................................................................................................179

(227d) Microbial Lipids Production From the Mixture of Glucose and Xylose Using Lipomyces Starkeyii
Phillipe Arber, Ramalingam Subramaniam, Sharif M. Rahman, Stephen Dufreche, Mark E. Zappi, Rakesh Baijpai
.........................................................................................................................180

(227e) Enabling Technologies for Understanding Recalcitrance
Mark F. Davis
.........................................................................................................................181

(227f) Deep Lignomic Profiling of Byproducts From Extractive Ammonia Fiber Expansion (EA) Pretreatments of Grasses
A. Daniel Jones
.........................................................................................................................182

(227g) Enhancing the Deconstruction of Biomass With Alkaline-Oxidative Pretreatments At Modest Oxidant Loadings
David Hodge
.........................................................................................................................183

(235a) Biomass Digestion By a Clostridium Thermocellum Model Consolidated Bioprocess Compared to Free
Enzyme Systems
.........................................................................................................................184

(235b) A Single Molecule Study of Cellobiohydrodase 1 From Trichoderma Reesei
Sonia Brady, Kelsey Best, Matthew Lang
.........................................................................................................................185

(235c) Development of Helper Proteins for Improved Cellulose Decrystallization and Hydrolysis
Min Jeong Sohn, Yachi Kang, Bettina Bonmarquis, Jay H. Lee, Matthew Reaff, Andreas S. Bonmarquis
.........................................................................................................................186

(235d) Novel Model for Simultaneous Enzymatic Hydrolysis of Cellulose and Hemicellulose Considering
Morphologies
.........................................................................................................................187

(235e) Scale-Up of Fermentation Process for Production of Bisabolene, a Novel Advanced Biofuel Precursor
Lucas Sandovall, Firehivest Tachea, Jessica Wong, Debjani Mitra, Helcio Burd, Bilge Ozyadin, Gregory Murray, Pavan Kumar
Reddy Kambar, James Gardner, Julio Baez, Jay D. Keasling, Taeck Soon Lee
.........................................................................................................................188

(235f) Drop-in Biofuels Production Using Mixed Culture Syngas Fermentation
Hasan K. Ariyeh, Kan Liu, Bradley Stevenson, Ralph S. Tanner, Mark R. Wilkins, Raymond L. Huddnake
.........................................................................................................................189

(245a) Implementation of Tower Gardens On An Urban University Campus
David R. Shonnard, David T. Allen, Nhan Nguyen, Sharon Austin
.........................................................................................................................190

(245b) New Developments in Implementing Green Engineering in the Chemical Engineering Curriculum
Andrew Lucero, John West, Kevin McCabe, Santosh Gangwal
.........................................................................................................................191

(245c) Incorporating Process Integration Methodologies Into Senior Capstone Design Courses
Russell F. Dunn, Kenneth A. Debelak
.........................................................................................................................192

(245d) Assembling Engineering for Sustainable Development Programs
Coey D. Jensen
.........................................................................................................................193

(277a) Biomass Gasification Using Carbon Dioxide: Chemistry and Process Modeling
Narendra Sadhwan, Mario Richard Eden, Sohul Adhikari
.........................................................................................................................194

(277b) Engineering Next Generation Biomass Feedstocks: Effect of Torrefaction On Gasification Products
Whitney Jablonski, Daniel Carpenter, Jessica L. Olsthoorn, Marc Oddo, Stuart Black, David Robichaud
.........................................................................................................................195

(277c) Operations of a Stratified Downdraft Gasifier On MSW for Development of a Waste to Energy Process
Andrew Lucero, John West, Kevin McCabe, Santosh Gangwal
.........................................................................................................................196

(277d) Effects of Oxygen and Steam On Biomass Gasification and Syngas Combustion in a Pilot-Scale System
Chung Van Huyh, Song-Chung Kong
.........................................................................................................................197

(277e) Demonstration of Biomass Conversion to Mixed Alcohols At the Pilot Scale
Jesse E. Hensley, Whitney Jablonski, Kristin Smith, Richard L. Bain, Joshua A. Schadie, Steven Phillips, Mark R. Nimlos, Kim
Magrini, Mark Davis
.........................................................................................................................198

(277f) Optimization of a 3ton/Day Biomass Fed Bubbling Fluidized Bed Gasification System
Prasanth Buchireddy, John Guillory, Mark Zappi, Joseph Yaruraki
.........................................................................................................................200

(284a) Insights Into Hydrothermal Pretreatment of Cellulosic Biomass Through the DOE Bioenergy Science
Center (BESC)
Charles Wyman
.........................................................................................................................201

(284b) Beyond Ethanol: Advanced Biofuels R&D At the Joint Bioenergy Institute
Blake Simmons
.........................................................................................................................202

(284c) Beyond Ethanol: Decentralized Pyrolysis and Electro catalysis for Producing Hydrocarbon Fuels
Christopher M. Saffron
.........................................................................................................................203

(284d) Engineering of Bacterial Methyl Ketone Synthesis for Biofuels: Recent Advances
Harry R. Beller
.........................................................................................................................204

(284e) Synergistic Impact of Natural Variant Or Transgenic Feedstocks Combined With Consolidated
Bioprocessing
Kelsey Yee
.........................................................................................................................205

Chao Zhang, Carl J. Houtman, J. Y. Zhu

Deepti Tanjore, Jessica Wong, Chenlin Li, James Gardner, Julio Baez

(803c) Maximize Enzymatic Saccharification and Minimize Sugar Degradation in SPORL Pretreatment of Douglas-Fir At a Low Temperature: A Kinetic Approach ........................................................................ 681
Deepti Tanjore, Jessica Wong, Chenlin Li, James Gardner, Julio Baez
(803d) Comparison of Different Process Configurations Using SSF At High Solid Loadings of Steam-Pretreated Corn Stover .................................................................682
Pia-Maria Bondesson, Guido Zacchi, Mats Galbe

(808a) CO2 Capture By Gas Hydrate Formation: Combined Effect of Thermodynamic and Kinetic Promoters .................................................................683
Nagu Daraboina, Nicolas Von Solms

(808b) CO2/Brine/Rock Interactions Under CO2 Sequestration Conditions .................................................................684
Yee Soong, Bret H. Howard, Dustin McIntyre, Robert P. Warzinski, Gino Ireri, Igor Haljasmaa, Dustin Crandall

(808c) Novel CO2 Capture and Carbonation Process With Waste Concrete .................................................................686
Dashi Shuto, Akihiro Yamasaki, Teruhisa Hongo, Atsushi Iizuka

(808d) Direct Capture and Conversion of CO2 From Flue Gas Via Ex-Situ Mineral Carbonation Using Chemical and Biological Catalysts .................................................................687
Edward J. Swanson, Patrick V. Brady, Ah-Hyung Alissa Park

(808e) A Green Approach to Mitigate CO2 Using Mixed Microbial Culture .................................................................688
Smita Raghuvanshi, Suresh Gupta, Somesh Mishra

(812a) Transforming Hype Into Reality in Next Generation of Alternative Fuels .................................................................689
Mark Bueger

(812b) Evaluation of the Effect of Different Carbon Sources On Lipid Production By Rhodotorula Glutinis From Pulp and Paper Wastewater As Fermentation Media .................................................................690
Marta Amirsadeghi, W. Todd French, Rafael Hernandez, William Holmes

(812c) Optimization of the Production of Glycerol Carbonate From Glycerol Using a Mg/Al/Zr Catalyst .................................................................691
Paul Mitchel A. Cortés-Jiménez, Rogelio Sotelo-Boyás, Fernando Trejo-Zárraga, Erika De La Rosa Reyna

(812d) Integration of Anaerobic Digestion of Cellulose Into Lipid Accumulation By a Mixed Microbial Consortium .................................................................692
Dhan Lord Fortela, Rafael Hernandez, W. Todd French, Andro Mondala, William Holmes, Emmanuel Revellaine, Efrem Egede

(812e) Sustainable Algae Oil Production: Integrating Waste Water .................................................................693
Marian Elmoraghy, Kelsey Price, Ihab Farag

(812f) Enzymatic Saccharification of Fines Rejects in Recycled Linerboard Papermills .................................................................694
Bandaru V. Ramarao, Byeoung Cheol Min, Bhavin Bhayani

(821a) Overall Decomposition Pathways of Lignin Related Compounds in Sub- and Supercritical Water .................................................................695
Yukihiko Matsumura, Tau Len-Kelly Tong

(821b) Effects of Temperature and Oxygen Concentration On Torrefaction of Oil Palm Kernel Shell .................................................................696
Shazleen Saadon, Yoshimitsu Uemura, Nurulina Mansor

(821c) Endothermic and Exothermic Reactions During Pyrolysis of a Woody Biomass Particle .................................................................697
Ken-Ichiro Tanoue, Shoma Murata, Toshhide Irii, Tatsuuo Nishimura, Yoshimitsu Uemura, Miki Tamiguchi, Ken-Ichi Sasauchi

(821d) Modeling the Ignition Phase of a Flash Carbonization Reactor .................................................................698
Michael J. Antal, Maider Legarra, Donald Anderson

(821e) CFD Analysis of Slag Flow and Residence Time in a Packed Bed Reactor .................................................................699
Kazra Samiei, Harald Raupenstrauch
