TABLE OF CONTENTS

VOLUME 1

KEYNOTE

Go Further with Fastener Finishes ................................................................. 1
Duane Drobnich

SESSION 1: LIGHT MATERIALS FINISHING

Is Ultrasonics Cleaning the Answer for Light Metals Finishing? ................................................................. 18
Barbara Kanegsberg Ed Kanegsberg

Unique New Thin Film Anodize Technology for Superior Adhesion Promotion, Bonding and Microfinish Using One Universal Electrolyte with Type IC, IIB, and III Capabilities ................................................................. 46
Fred C. Schaedel

Microcrystalline Anodic Coatings "A Revolutionary Platform Technology for Corrosion Protection" ................................................................. 57
Jack Tetrault

Hard Anodizing Type III and Nonporous Anodic Aluminium Oxide, in Surface Engineering ................................................................. 67
Xavier Albort Ventura

Testing of Non-Chromium Sealer for U.S. Air Force Anodizing Operations ................................................................. 73
Elizabeth S. Berman, Sarah Clark, Rob Mason, Melissa Klingenberg, Howard Smith

A Systematic Approach to Evaluation of Chemical Conversion Coatings and Anodize Processes ................................................................. 92
Gail Stribling-Geldien

SESSION 2: ELECTRONICS

New Innovative Selective Plating Brings Benefits to both PCB and Metal Finishing Markets ................................................................. 100
Michael Deley, Mike Vinson, Alex Beavers

Nanoscale Characterization of Thin Immersion Silver Coatings on Copper Substrates ................................................................. 111
Tamas I. Török, Eva Kun, Daniel Sos

CAM Tool for Improved PCB Plating Process Yield ................................................................. 134
Bart Van den Bossche, Leslie Bortels, Robrecht Belis

Feasibility Studies of Cyanide-free Gold Plating Solutions For Electronic Connector Plating Applications ................................................................. 142
Rob Schetty

Palladium - Nickel: An Update ................................................................. 160
Stewart J. Hemsley

Current Developments in “Cyanide Free Silver Plating” ................................................................. 173
Steven Burling

SESSION 3: AEROSPACE I – HEXAVALENT CHROMIUM AND CADMIUM ALTERNATIVES

The 25-Year Chrome Replacement Journey: Are We There Yet? ................................................................. 198
Eric Eichinger

Chromium-Free Conversion Coating for Electroplated Zinc-Nickel ................................................................. 211
Melissa Klingenberg, E Berman, N. Voevodin

Mono-layer UV-cured Hybrid Sol-gel as Aeronautical Coatings Providing High Corrosion Resistance on Metallic Substrates and Protection of Composites ................................................................. 230
Juliana Garcia

Alkaline Zn-Ni as Cd Plating Replacement – Implementation and Challenges ................................................................. 242
Nihad Ben Salah, P. Mossier, S.-P. Dupont, P. Vieira, A. Rose Elyea

Characterization of Zn-Ni Coatings as a Replacement for Cadmium Electrodeposit for Rotorcraft Applications ................................................................. 255
Peter J. McCallum/Zhimin Zhong
Hydrogen Effects of Common Cadmium Alternatives on Aerospace Grade 4340

Scott Grendahl, Ed Babcock

SESSION 4: BEST PRACTICES IN SURFACE FINISHING

Predicting Emulsion Cleaner Life
Susan Freeland

Going Beyond Borders In Surface Tension Reduction for Chromium
Helmut Horstemke

Methods and Test Procedures for Measuring Deposit Stress and the Formulas Employed for Calculating Stress Values
Frank Leaman

Aluminum Metal Surface Finishing Corrosion Causes and Troubleshooting
W. J. Fadden, Jennifer Deheck

Media Attrition During Vibratory Bowl Processing and its Effects on the Performance of Chemically Accelerated Vibratory Finishing
William P. Nebiolo

DC Power System Topologies for Surface Finishing
Kyle Clark

SESSION 5: ADVANCES IN PLATING & SURFACE FINISHING I

Electrodeposition and Pulse Plating of High Performance Zinc-Nickel Coatings
Luca Magagnin

Development of a Pulse/Pulse Reverse Electrodeposition Process for Application of Co-Mn Alloy Coatings to SOFC Interconnects
Heather McCrabb, S. Lucatero, S. Snyder, E.J. Taylor, H. Zhang, X. Liu

Manufacturing of Electro-catalytic Material for Large Scale Hydrogen Production by Combining Electroplating, PVD, Thermo-chemical Diffusion and a Leaching Processes
Per Moller, Cecilia K. Kjartansdottir, Michael Caspersen, Sune Egelund, Lars Pleth Nielsen

Formation Process of Porous Film by Electrolytic Plating
Makoto Horikawa

Use of Pulse/Pulse Reverse Processes to Control Internal Stress and Other Properties in Pure Tin Deposits
Holly Garich, E.J. Taylor

SESSION 6: REGULATORY UPDATE

Impact of REACH Authorization Process on Chrome Plating in the EU
Patrick Benaben, Jeffery S. Hannapel

Implementation of the Globally Harmonized System
Jim Miille

Out in the Field Experiences with POTWs
Jim Collins

Summary of Test Data on the Effectiveness of Non-PFOS Fume Suppressants in Reducing Chromium Air Emissions
Ben Brock

Contingency Planning for the Surface Finishing Industry
Joelie Zak

Key Regulatory and Policy Developments Impacting the Surface Finishing Industry
Jeff Hannapel

SESSION 7: HARD CHROME ALTERNATIVES & WEAR RESISTANT COATINGS

Plating of NiW, NiMo and NiMoW with and without Fe: Induced Codeposition Mechanism
Elizabeth Podlaha-Murphy, M. Silva, A. Kola, K. Duarte, S. Sun

Identifying New Alternatives for Hard Chromium Plating
Per Moller, Lars Pleth Nielsen
VOLUME 2

Carbodeon Technology Presentation ................................................................. 621
  Jim Meriano

Functional Trivalent Chromium Electroplating: Enhanced Fatigue Performance ........................................... 639
  Timothy Hall, Maria Inman, EJ Taylor, Savidra Lucatero, Bruce Griffin, George Cushnie, Randal Taylor, Mark Jaworoski, Joe Bonivel, Roger Eybel, Norbert Dau

Savroc Triple Hard Coating Technology ........................................................................................................... 656
  Matti Koski

Evaluation of Wear Resistant Coatings for Titanium Alloys .................................................................................. 666
  Barbara Tury

SESSION 8: AUTOMOTIVE I: DECORATIVE SESSION

Engineering Design Rule for Upfront Plating Simulation and Production Optimization ....................................... 679
  LaRon Brown, Byron Davidson, Alan Rose, B. Van den Bossche

The Challenge to Replace Hexavalent Chromium for Plating on Plastics ................................................................. 692
  Terence J. Clarke

Improving the Adhesion of UV Curable Coatings to Plastic and Metal Substrates ....................................................... 709
  Paul Mills

High Corrosion Resistant Trivalent Chromium Layer for Automotive Bright Trim ................................................... 730
  Doug Lay

Impact of European Union REACH on US Auto Manufacturers .............................................................................. 749
  Mariola Brandes, Isaac Chung, Linda Wing

Russian Mud Corrosion in the Automotive Industry ................................................................................................. 758
  Dan Snyder

SESSION 9: CHEMICAL MILLING

Titanium Alpha Case Removal ................................................................................................................................. 772
  Bruce Griffin

Green Chemical Processing Maskant, Not Just a Color ............................................................................................... 783
  Thomas Choe

Chemical Versus Mechanical Milling Business Case Tool ........................................................................................ 793
  Rick Wire

SESSION 10: CORROSION

Directing Surface Engineering to Corrosion Mitigation ........................................................................................... 801
  Gary L. Doll, Joseph H. Payer

Proportional Corrosion Ratings in One Week ASTM G-85 vs 36 Weeks ASTM B-117 ................................................... 813
  Frederic Gheno

Corrosion Resistance Comparison and Cost Savings of EN-plated Mild Steel vs. 400 Series Stainless Steel ................ 828
  Lloyd Ploof

Thickness Plating with Nickel-free Palladium Alloys ............................................................................................... 833
  Mauro Gajo

New Surface Treatment Process Improves the Corrosion Resistance of Zirconium Alloys ........................................... 846
  Sergey Kruglikov, Nataliya Nekrasova, Alex Klimov, Igor A. Shiepov

SESSION 11: AEROSPACE II: ALUMINUM AND ORGANIC COATINGS

Advanced Deposition Method for High Quality Aluminum and Aluminum Alloy Corrosion Resistant Coatings ................................................................. 862
  Susie Eustis, D. Huss, A. Goff
SESSION 12: AUTOMOTIVE II: FUNCTIONAL

Black Plating from a Hexavalent Chromium Free Bath and Its Characteristics ................................................................. 967
   Hideyuki Kanematsu, Kensuk Kuroda, Masazumi Okido, Masaaki Kato
A Comparative Study of Alkaline and Acid Zinc Nickel Alloy Systems and Their Deposits .................................................. 977
   Tony Oriti
Application of High Corrosion Resistance Sealer for Aluminum and Materials with Aluminum Pigments .................................................... 989
   Shusaku Ishikawa
Applications and Properties of Protective Coatings from Dip-spin and Electroplating ......................................................... 997
   Klaus Wojczykowski, Alain Hill
The Purpose and Details of SAE/USCAR – 32 for Fasteners ............................................................................................... 1023
   Ralph White

SESSION 13: ADVANCES IN PLATING & SURFACE FINISHING II

Combining Competitiveness and Profitability for Electroless Nickel Operation by Addressing True Cost of Ownership .................................................. 1032
   Helmut Horsthemke
Real World Performance, New Generation of Electroless Nickel .......................................................................................... 1039
   John Varkonda
Recent Electroless Nickel Innovations: Technology For Improving Profitability for the Applicator .................................. 1050
   Brad Durkin
Toxic Heavy Metal Free Stabilizer Technology in Electroless Nickel ....................................................................................... 1079
   Rene LeComte
Electrolytic High Phosphorus Nickel; Expanding Applications, Improved Process Control and Competitive Cost .................. 1095
   Richard E. DePoto, Joerg Weber, Klaus Leydecker
Conformal Electroless Deposition on Monolayers for TSV Applications ........................................................................... 1112
   Luca Magagnin

SESSION 14: CLEAN MANUFACTURING AND PROCESSING

Chrome-free Deoxiders for Aluminum Processing .................................................................................................................... 1135
   Frank Torok, Gary Loar
Cold Spray for Additive Manufacturing or 3D Printing .............................................................................................................. 1146
   Ed Malison, Wally Birtch, Julio Villafuerte
Cleaning "Gotchas" in Additive Manufacturing ..................................................................................................................... 1167
   Barbara Kanegsberg, Ed Kanegsberg
Quantitation and Analysis of Copper and Nickel Plating Bath Additives by High Pressure Liquid Chromatography .......................... 1196
   Marc Plante
Tubular Membrane Filtration for Metals Precipitation Waste Water Treatment ................................................................. N/A
   Jeff Williams
In-Situ Soil and Groundwater Cleanup of Hexavalent Chromium, Nickel and Other Metals and Metalloids by Nano-Scale Ferrous Sulfide Slurry ........................................... 1212
   Jim Rousse, Richard H. Christensen, Steven R. Irvin
