2014 Sixth International Symposium on Parallel Architectures, Algorithms and Programming

(PAAP 2014)

Beijing, China
13-15 July 2014
Session 1: Architectures

Design and Evaluation of Dynamically-Allocated Multi-queue Buffers with Multiple Packets for NoC Routers .......................................................... 1

Yung-Chou Tsai and Yarsun Hsu

Algorithmic Aspects for Bi-Objective Multiple-Choice Hardware/Software Partitioning .......................................................... 7

Wenjun Shi, Jigang Wu, Siew-Kei Lam, and Thambipillai Srikantan

Fault-Tolerant Distributed Publish/Subscribe Using Self-Stabilization .......................................................... 13

Yihua Ding, James Z. Wang, and Pradip K. Srimani

A Runtime Framework for GPGPU .......................................................... 19

Shang-Chieh Lin and Yarsun Hsu

A Sensitive and Robust Grid Reputation System Based on Rating of Recommenders .......................................................... 23

Yongrui Cui, Hang Zhao, Jun Wu, Zhiyuan Su, and Mingchu Li

Efficient FPGA-mapping of 1024 point FFT Pipeline SDF Processor .......................................................... 29

Imran Ali Qureshi, Fahad Qureshi, and Ghulam Muhammad Shaikh
Session 2: Big Data on Electrical Applications

Multi-parameter Online Identification Algorithm of Induction Motor for Hybrid Electric Vehicle Applications .......................................................... 35
   Yan Liu

Wide Area Power System Fault Detection Using Compressed Sensing to Reduce the WAN Data Traffic .......................................................... 40
   Bei Li, Jinghan He, Tony Yip, and Jiangchen Li

PSO Applied to Optimal Operation of a Micro-Grid with Wind Power .......................................................... 46
   Guangke Hao, Rong Cong, and Hui Zhou

A Fuzzy Multi-objective Optimization Method Solving the Output of Energy Storage System .......................................................... 52
   Yiyi Wang, Mei Huang, and Caiping Zhang

Session 3: Big Data Mining

Multiple Feature-Sets Method for Dependency Parsing .......................................................... 57
   Xianchao Zhang, Dong Du, Xinyue Liu, and Wenxin Liang

Adaptive Centroid-Based Clustering Algorithm for Text Document Data .......................................................... 63
   Ximing Li, Jihong Ouyang, Xiaotang Zhou, and Bo Fu

Topic-Sensitive Multi-document Summarization Algorithm .......................................................... 69
   Na Liu, Xiao-Jun Tang, Ying Lu, Ming-Xia Li, Hai-Wen Wang, and Peng Xiao

Object Enhancement and Recognition Based on Hough Forest for Underground Video .......................................................... 75
   Bo Fu and Chuan-Ming Song

Session 4: Combinatorial and Graph Algorithms

Parallel Algorithms for Testing Length Four Permutations .......................................................... 81
   Yijie Han and Sanjeev Saxena

On-Line Algorithms for 2-Space Bounded Cube and Hypercube Packing .......................................................... 87
   Xiaofan Zhao and Hong Shen

Efficient Parallelization of a Two-List Algorithm for the Subset-Sum Problem on a Hybrid CPU/GPU Cluster .......................................................... 93
   Letian Kang, Lanjun Wan, and Kenli Li

Approximating the Shallow-Light Steiner Tree Problem When Cost and Delay are Linearly Dependent .......................................................... 99
   Longkun Guo, Nianchen Zou, and Yidong Li
Session 5: High Performance Systems I

Parallel Optimization Strategies for MIC Heterogeneous Parallel Systems ................................................................. 104
  Tao Ju, Xiaoshe Dong, Endong Wang, Liang Li, and Zhengdong Zhu

Performance Evaluation of Read and Write Operations in Hadoop Distributed File System ................................................................. 110
  Talluri Lakshmi Siva Rama Krishna, Thirumalaisamy Ragunathan, and Sudheer Kumar Battula

Characteristic Analysis of Operating Systems for Large Scale Hierarchical NUMA System ................................................................. 114
  Qiuming Luo, Yuanyuan Zhou, Mei Wang, and Ye Cai

Bandwidth Based Performance Optimization of Multi-threaded Applications ................................................................. 118
  Sheheeda Manakkadu and Sourav Dutta

Global Load Instruction Aggregation Based on Array Dimensions ................................................................. 123
  Yasunobu Sumikawa and Munehiro Takimoto

Session 6: High Performance Systems II

Secure Clustering and Reliable Multi-path Route Discovering in Wireless Sensor Networks ................................................................. 130
  Cheng Zhong, Yinghong Mo, Jing Zhao, Cong Lin, and Xiangyan Lu

XML Optimistic Concurrency Control Protocol for DOM API ................................................................. 135
  Weifeng Shan and Husheng Liao

A Parallel Implementation of Acoustic Propagation Model on Cloud Platform ................................................................. 140
  Binbin Yu, Simin Cheng, Dan Wang, Xichen Wu, Hongkun Mai, and Guangzhong Sun

A Robust Feature Point Matching Method for Dynamic Aerial Image Registration ................................................................. 144
  Zhaoxia Liu, Yaxuan Wang, Yu Jing, and Oujun Lou

Anomaly Detection by Diffusion Wavelet-Based Analysis on Traffic Matrix ................................................................. 148
  Teng Sun and Hui Tian

Study on a New Model for Network Traffic Matrix Estimation ................................................................. 152
  Yanning Niu and Hui Tian

Session 7: Interconnection Networks

A Novel On-Demand Data Broadcast Scheme in Wireless Networks ................................................................. 155
  Shuli Luan and Ping He

Efficient Algorithms for Vehicle Type Identification Using Mobile-Phone Locations ................................................................. 161
  Peilan He, Wenjun Wang, and Guiyuan Jiang

A Distributed Multi-hub Translator Trust Model for Interdomain Routing in Large Networks ................................................................. 166
  Lingjing Kong and Hong Shen
AB-Chord: An Improved Chord Based on Ant Colony Optimization and Bi-Directional Lookup Routing ................................................................................................................................................................................................................................................................. 172
Limin Zhao, Hong Shen, Yidong Li, and Jun Wu

**Session 8: Media Computing in Parallel/Distributed Systems**

A Parallel SRM Feature Extraction Algorithm for Steganalysis Based on GPU Architecture ................................................................................................................................................................................................................................................................. 178
Kaizhi Chen, Chenjun Lin, Shangping Zhong, and Longkun Guo

Sound Source Localization Algorithm Based on a Helmet-Mounted Microphone Array ................................................................................................................................................................................................................................................................. 183
Yi Zhang and Shujie Meng

Audio Retrieval Based on Manifold Ranking ................................................................................................................................................................................................................................................................................................................................. 187
Jing Qin, Xinyue Liu, and Hongfei Lin

A Two-Step Similarity Ranking Scheme for Image Retrieval ................................................................................................................................................................................................................................................................................................................................. 191
Di Wu, Jun Wu, Ming-Yu Lu, and Chun-Li Wang

**Session 9: Parallel/Distributed Databases and Knowledge Discovery**

Using Category and Keyword for Personalized Recommendation: A Scalable Collaborative Filtering Algorithm ................................................................................................................................................................................................................................................................................................................................. 197
Ke Ji and Hong Shen

Clustering Subtrajectories of Moving Objects Based on a Distance Metric with Multi-dimensional Weights ................................................................................................................................................................................................................................................................................................................................. 203
Yanjun Chen, Hong Shen, and Hui Tian

The Effect of Outliers in the Design of Data Gathering Tours ................................................................................................................................................................................................................................................................................................................................. 209
Khaled Almi’ani, Sanjay Chawla, and Anastasios Viglas

Speed Up Distance-Based Similarity Query Using Multiple Threads ................................................................................................................................................................................................................................................................................................................................. 215
Fuli Lei, Wenbo Wu, Qiaozhi Li, He Zhang, Ping Li, Qiuming Luo, and Rui Mao

**Session 10: Privacy and Security**

A Privacy-Preserving Data Publishing Method for Multiple Numerical Sensitive Attributes via Clustering and Multi-sensitive Bucketization ................................................................................................................................................................................................................................................................................................................................. 220
Qinghai Liu, Hong Shen, and Yingpeng Sang

Android Privacy Information Encoding Mechanism (APIEM) ................................................................................................................................................................................................................................................................................................................................. 224
Lee Mengxuan, Song Jiaxing, and Liu Weidong

KP-ABE with Attribute Extension: Towards Functional Encryption Schemes Integration ................................................................................................................................................................................................................................................................................................................................. 230
Weiqian Huo, Jisheng Pei, Ke Zhang, and Xiaojun Ye

Preventing Client Side XSS with Rewrite Based Dynamic Information Flow ................................................................................................................................................................................................................................................................................................................................. 238
Wenmin Xiao, Jianhua Sun, Hao Chen, and Xianghua Xu
Using Symmetry Dicke State as Security Detection Particle in Quantum “Ping-Pong”
Qinghai Liu, Hong Shen, Hui Tian, and Yingpeng Sang

Session 11: Task Scheduling
A Task Scheduling Algorithm for Automated Parallel Processing of XQuery
Yuelong Quan and Husheng Liao
An Efficient Energy Scheduling Algorithm for Workflow Tasks in Hybrids
and DVFS-Enabled Cloud Environment
Zhuo Tang, Zhenzhen Cheng, Kenli Li, and Keqin Li
A DAG Task Scheduling Scheme on Heterogeneous Computing Systems Using
Invasive Weed Optimization Algorithm
Kenli Li, Shuai Li, Yuming Xu, and Zhaoxin Xie
A Heuristic Speculative Execution Strategy in Heterogeneous Distributed
Environments
Huicheng Wu, Kenli Li, Zhuo Tang, and Longxin Zhang

Session 12: International Workshop on High-Performance Computing for Big Data
PPMA: Parallel Programming Model for an Audio Application Specific Multi-core
DSP
Xu Jiangwei, Wei Zhenqi, and Liu Peilin
A Novel Multi-bit Watermarking Algorithm Based on HVS
OuJun Lou, ShaoHua Li, ZhaoXia Liu, and ShuangTong Tang
An Ensemble of Classifiers Algorithm Based on GA for Handling Concept-Drifting
Data Streams
Jinghua Guan, Wu Guo, Heng Chen, and OuJin Lou
An Integrated Hierarchical Temporal Memory Network for Real-Time Continuous
Multi-interval Prediction of Data Streams
Jianhua Diao and Hyunsyug Kang
Design and Implementation for File Monitor System Based on Windows Driver
Xiao-Jun Tang, Ying Lu, and Na Liu
Application and Research of Mobile Terminal with Android in the Equipment
Monitoring System
Ying Lu, Xiao-Jun Tang, Na Liu, Yu-Yue Mao, Ming-Xia Li, Peng Xiao,
and Hai-Wen Wang
