2014 IEEE 13th International Symposium on Network Computing and Applications

(NCA 2014)

Cambridge, Massachusetts, USA
21-23 August 2014
Message from the Steering Committee Chair and General Chair

Message from the Program Committee Co-Chairs

Conference Committee

Program Committee

External Reviewers

Session 1: Manet 1

Dynamic Attribute Based Vehicle Authentication

Shlomi Dolev, Lukasz Krzywiecki, Nisha Panwar, and Michael Segal

Using Virtual Mobile Nodes for Neighbor Detection in Proximity-Based Mobile Applications

Behnaz Bostanipour and Benoît Garbinato

ADD: A Data Dissemination Solution for Highly Dynamic Highway Environments

Allan M. Souza, Guilherme Maia, and Leandro A. Villas

Does Mobility Matter? An Evaluation Methodology for Opportunistic Apps

Jesus Friginal, Marc-Olivier Killijian, Roberto Pasqua, Matthieu Roy,
and Gilles Trédan

Session 2: Manet 2 (Short Papers)

Strip Interoperability for Wireless Ad Hoc Routing Protocols

Marco Antonio To, Gerardo Morales, and Stephane Maag
GTO: A Broadcast Protocol for Highway Environments over Diverse Traffic Conditions .................................................................37
   Ademar Takeo Akabane, Leandro Aparecido Villas,
   and Edmundo Roberto Mauro Madeira

A Deadline Aware DTN Approach Based on Epidemic Routing .................................................................41
   Chungjae Lee and Ki-Il Kim

VANets: An Exploratory Evaluation in Vehicular Ad Hoc Network for Urban Environment .................................................................45
   Claudio Correa, Jó Ueyama, Rodolfo Ipolito Meneguette,
   and Leandro Aparecido Villas

Session 3: Networks

Congestion-Aware Adaptive Routing in 2D-Mesh Multicores ...........................................................................50
   Dimiter Avresky, Fabien Chaix, and Michael Nicolaidis

Optimal Configuration for N-Dimensional Twin Torus Networks .................................................................59
   Francisco J. Andújar, Juan A. Villar, José L. Sánchez, Francisco J. Alfaro,
   and José Duato

Session 4: Cloud Computing 1

Resource Management in Cloud Federation Using XMPP ...........................................................................67
   Maria Fazio, Antonio Celesti, Massimo Villari, and Antonio Puliafito

On-Demand Resource Allocation Middleware for Massively Multiplayer Online Games .................................................................71
   André Pessoa Negrão, Miguel Adaixo, Luís Veiga, and Paulo Ferreira

A Low-Complexity Fault-Tolerant Document Storage System ...........................................................................75
   Dishelt Francisco Torres-Paz, Jorge Antonio Perez-Espinoza,
   and José Juan Garcia-Hernandez

A Resilient Hierarchical Distributed Loop Self-Scheduling Scheme for Cloud Systems .................................................................80
   Yiming Han and Anthony T. Chronopoulos

Health Records Protection in Cloud Environment ...........................................................................85
   Doan B. Hoang and Lingfeng Chen

Session 5: Performance (Short Papers)

Interference Avoidance through Frequency Assignment and Association Control in IEEE 802.11 WLAN ...........................................................................91
   Babul P. Tewari and Sasthi C. Ghosh
Recovery of Information Lost by the Least Squares Estimation in Real-Time Network Environment .................................................................................................................................96  
*Hengky Susanto and Byungguk Kim*

Based-Agent Distributed Architecture to Manage the Dynamic Multi-hop Ridesharing System ..........................................................................................................................101  
*Sondes Ben Cheikh, Slim Hammadi, and Christian Tahon*

**Session 6: Cloud Computing 2**

A Novel Approach for Dual-Direction Load Balancing and Storage Optimization in Cloud Services ..........................................................................................................................105  
*Klaithem Al Nuaimi, Nader Mohamed, Mariam Al Nuaimi, and Jameela Al-Jaroodi*

A Sharing-Aware Greedy Algorithm for Virtual Machine Maximization ..........................................................................................................................113  
*Safraz Rampersaud and Daniel Grosu*

Deploying Large-Scale Service Compositions on the Cloud with the CHOREOS Enactment Engine ..................................................................................................................121  
*Leonardo Leite, Carlos Eduardo Moreira, Daniel Cordeiro, Marco Aurélio Gerosa, and Fabio Kon*

**Session 7: Network Security**

SDN-Based Private Interconnection ..........................................................................................................................129  
*Shlomi Dolev and Shimrit Tzur-David*

GPU-Based NSEC3 Hash Breaking ..........................................................................................................................137  
*Matthäus Wander, Lorenz Schwittmann, Christopher Boelmann, and Torben Weis*

On the Effectiveness of NX, SSP, RenewSSP, and ASLR against Stack Buffer Overflows ..........................................................................................................................145  
*Hector Marco-Gisbert and Ismael Ripoll*

**Session 8: Efficient Computation and Communication (Short Papers)**

Green Proxy-Based Approaches for BitTorrent ..........................................................................................................................153  
*Sena Efsun Cebeci, Oznur Ozkasap, and Giuseppe Anastasi*

Orchestration of Energy Efficiency Functionalities for a Sustainable Network Management ..........................................................................................................................157  
*Ana C. Riekstīn, Guilherme C. Januário, Bruno B. Rodrigues, Viviane T. Nascimento, M. Roxana Pirlea, Tereza C.M.B. Carvalho, and Catalin Meirosu*

Entropy Adaptive On-Line Compression ..........................................................................................................................162  
*Shlomi Dolev, Sergey Frenkel, and Marina Kopeetsky*
**Session 9: Overlay and Sensor Networks (Short Papers)**

Local Search Heuristics for Media Streams Planning with Transcoding .........................................................167
  *Jiří Marek, Hana Rudová, and Petr Holub*

A New Solution to Perform Automatic Meter Reading Using Unmanned Aerial Vehicle .................................................................171
  *José Torres Neto, Daniel Ludovico Guidoni, and Leandro Villas*

Secure Sensing over Named Data Networking ........................................................................................................175
  *Jeff Burke, Paolo Gasti, Naveen Nathan, and Gene Tsudik*

**Session 10: Overlay and Cellular Networks**

An Adaptive Peer-to-Peer Overlay Scheme for Location-Based Services .................................................................181
  *Giacomo Brambilla, Marco Picone, Michele Amoretti, and Francesco Zanichelli*

A Probabilistic Greedy Algorithm with Forced Assignment and Compression for Fast Frequency Assignment in Cellular Network ........................................................................................................189
  *Subhankar Ghosal and Sasthi C. Ghosh*

Media Streams Planning with Uncertain Link Capacities ........................................................................................................197
  *Pavel Troubil, Hana Rudová, and Petr Holub*

**Session 11: Distributed Systems**

Parallel Deferred Update Replication .................................................................................................................................205
  *Leandro Pacheco, Daniele Sciascia, and Fernando Pedone*

On Making Transactional Applications Resilient to Data Corruption Faults ...........................................................................213
  *Mohamed Mohamedin, Roberto Palmieri, and Binoy Ravindran*

An Advance Reservation Mechanism to Enhance Throughput in an Opportunistic High Performance Computing Environment ..................................................................................................................221
  *Eliza Gomes and Mario Antonio Ribeiro Dantas*

**Session 12: Sensor Networks**

An Adaptive Approach to Opportunistic Data Forwarding in Underwater Acoustic Sensor Networks .................................................................................................................................229
  *Nusrat Nowsheen, Gour Karmakar, and Joarder Kamruzzaman*

  *Matheus A. De Paulo, Mariã C.V. Nascimento, and Valério Rosset*

Clustering in WSN Using Node Ranking with Hybrid Nodes Duty-Cycle and Energy Threshold .................................................................................................................................245
  *Mariam Al Nuaimi, Khaled Shuaib, and Klaithem Al Nuaimi*
Session 13: Theory and Other

A Coded Shared Atomic Memory Algorithm for Message Passing Architectures ...............................................................253

Viveck R. Cadambe, Nancy Lynch, Muriel Médard, and Peter Musial

Time and Location Power Based Malicious Code Detection Techniques for Smartphones ...............................................................................................................................261

Bryan Dixon, Shivakant Mishra, and Jeannette Pepin

Solvability-Based Comparison of Failure Detectors .................................................................269

Srikant Sastry and Josef Widder

Session 14: Self-Adaptation and Protocols (Short Papers)

An Evolutionary Game Theoretic Approach for Configuring Cloud-Integrated Body Sensor Networks .................................................................................................................277

Yi Cheng-Ren, Junichi Suzuki, Dung H. Phan, Shingo Omura, and Ryuichi Hosoya

Self-Control Cloud Services ........................................................................................................282

Tatiana Aubonnet and Noemie Simoni

Supporting SLA Negotiation for VSDN Based on Similarity and Price Issues .......................................................287

Rafael Lopes Gomes, Luiz Fernando Bittencourt, and Edmundo Roberto Mauro Madeira

Formal Analysis of Secure Device Pairing Protocols .........................................................................................291

Trung Nguyen and Jean Leneutre

Session 15: Network Security (Short Papers)

Immunization against Infection Propagation in Heterogeneous Networks ..........................................................296

Waseem Abbas, Sajal Bhatia, Yevgeniy Vorobeychik, and Xenofon Koutsoukos

Hardware Implementation of Quasigroup Encryption for SCADA Networks ..........................................................301

William Mahoney, Abhishek Parakh, and Matthew Battey

ETSSDetector: A Tool to Automatically Detect Cross-Site Scripting Vulnerabilities .................................................................306

Thiago S. Rocha and Eduardo Souto

Author Index .................................................................................................................................310
