TABLE OF CONTENTS

VOLUME 1

Towards the Guaranteed Control of Production Output: A Probabilistic Approach ................................................................. 1
Koril Chernyshov

Modelling of HEV Lithium-Ion High Voltage Battery Pack Using Dynamic Data ................................................................. 7
Ramesh Kumar Januri, Shivaram Kumat, Nirmal Goyal, Ramanathan Annamalai, Dipali Modak, Hiroshi Tashiro, Nobuya Miwa

On the Set of Perron Exponents of Discrete Linear Systems ..................................................................................................... 13
Michal Niewiadowski, Adam Czernik, Jerzy Klamka

Disturbance Decoupling for Nonlinear Systems by Measurement Feedback: Sensor Location .............................................. 16
Arvo Kaldmae, Uffe Kotta, Alecsy Shumsly, Alexey N. Zhitarov

Experimental Validation of a Novel Control Strategy for an Off-Grid Hybrid Stirling Engine/Super capacitor
Power Generation System .................................................................................................................................................................. 22
Mustapha Amine Rahmani, Mazen Alamir, David Gualino, Sylvain Lechat Sanjuan

Structured Uncertainty Analysis of Pole Placement and H∞ Controllers for Directional Drilling Attitude Tracking .................. 29
Martin Thomas Bayly, James F. Whidborne, Neilkunal Panchal

Anna Lindholm, Krister Forsman

Quantum Lyapunov Control Based on the Average Value of an Imaginary Mechanical Quantity ............................................. 42
Shuang Cong, Fangfang Meng, Sen Kuang

Stability Analysis of Impulsive Positive Systems ....................................................................................................................... 49
Ji-Shi Zhang, Yun-Wu Wang, Jiang-Wei Xiao, Zhi-Hong Guan

Observer-Based Fuzzy Control for Nonlinear Fractional-Order Systems Via Fuzzy T-S Models: The 1<α<3 Case ....................... 54
Zhe Guo, Xingmeng Liang, Lihong Fang

The Air-Breathing Hypersonic Vehicle Adaptive Backstepping Control Design Based on the Dynamic Surface .................. 60
Chengbin Liu, Chen Bai, Zhang Ren, Xingyue Shao

On Time-Reversibility of Linear Stochastic Models ................................................................................................................. 67
Tryphon T. Georgiou, Anders Lindquist

Exponential Tracking Control of Nonlinear Systems with Actuator Nonlinearity ................................................................. 73
Zhengqiang Zhang, Rui-Hua Wang, Hanyong Shao

A Unified Framework for EIV Identification Methods in the Presence of Mutually Correlated Noises ........................................ 79
Torsten Soderstrom, Roberto Diversi, Umberto Soverini

Quantized Observer-Based Coordination of Linear Multi-Agent Systems ............................................................................. 85
Yang Meng, Tuo Li

Self-Organising Disturbance Attenuation in Unidirectionally Coupled Synchronised Systems .................................................. 91
Jan Lunze

An Iterative Approach to Reduce the Variance of Stochastic Dynamic Systems ........................................................................ 98
Li Xiu

A Novel Probability Density Estimating Method for Relative Altitudes of Civil Aircraft in Cruising Phase ................................. 104
Jing-Xue Chen, Yong-Wang Yue

Generating Initial Estimates for Wiener-Hammerstein Systems Using Phase Coupled Multisines ............................................. 112
Johan Schoukens, Koen Tiels, Maarten Schoukens

Architecture and Structure of Robust PID Controllers ........................................................................................................... 118
Ilan Rusnak, Liat Peled-Elitan

Modeling of a Power Plant (A Case Study of Savannah Sugar Power Plant) ........................................................................ 124
Jerome Mishon Gumpy, Jibrin Danladi Jiya

Model-Plant Mismatch Expression for Classically Controlled Systems .................................................................................. 131
Laurent Eugene Olivier, Ian Craig

Application of Person-By-Person Equilibrium and Performance-Measure Statistics to Distributed Control of Uncertain Stochastic Large-Scale Systems with Time Delays .................................................................................. 137
Khanh D. Pham

Residual Generator Fuzzy Identification for Wind Farm Fault Diagnosis ................................................................................... 145
Silvio Simani, Saverio Farsani, Paolo Castaldi

State Dependent Difference Riccati Equation Based Estimation for Corkscrew Maneuver ..................................................... 151
Liat Peled-Elitan, Ilan Rusnak

Model Reference Switching Quasi-LPV Control of a Four Wheeled Omnidirectional Robot .................................................... 157
Damiano Rotondo, Fatima Nejjar, Vicenc Puig

An Adaptive Controller for Bilateral Teleoperators: Variable Time-Delays Case ................................................................. 163
Emmanuel Nuno, Ioannis Sarras, Luis Basanez

On Adaptive Measurement Inclusion Rate in Real-Time Moving-Horizon Observers .......................................................... 169
Mazen Alamir

Economic Energy Distribution and Consumption in a Microgrid Part 2: Macrocell Level Controller ............................................. 175
Fatemeh Tabarsima, Jakob Stoustrup, Palle Andersen, Per Printz Madsen

Simultaneous Actuation & Sensing for Electrostatic Drives in MEMS Using Frequency Modulated Capacitive Sensing .......................................................................................................................... 182
Steven Moore, S. O. Reza Moshheimani
Green Building Facilitated by Supply Demand Coordination in Microgrid .......................................................... 187
Zhaoxiang Wu, Qing, Shun Jia, Xiaohong Guan
Decentralized Detection with Censoring Sensors Over a Packet-Dropping Network ........................................ 194
Xiaoyang Ren, Ming Shi
Recursive Actuator Fault Detection and Diagnosis for Emergency Landing of UASs ........................................... 200
Xilin Yang, Luis Mejias Alvarez, Michael David Warren, F. Gonzalez, Ben Uzor
Loss Minimization and Voltage Control in Smart Distribution Grid ................................................................. 208
Morten Juelsgaard, Christoffer Sloth, Rajal Wniewirowski, Jayakrishnan Radhakrishna Pillai
A Sensorless Speed-Tacking Controller for Permanent Magnet Synchronous Motors with Uncertain Parameters 216
Maria Letizia Corradini, Andrea Cristoforo
A Distributed Cooperative Control Scheme with Optimal Priority Assignment and Stability Assessment .......... 222
Haiyang Ding, Mazen Alamin, Ahmad Hably
Control of VTOL Vehicles with Thrust-Tilting Augmentation ........................................................................... 234
Minh-Duc Hua, Terek Hamel, Claude Samson
Improved Control of Distributed Parameter Systems with Time-Varying Delay Based on Mobile Actuator-Sensor 242
Networks .................................................................................................................................................................... 242
Zhengxiang Jiang, Baotong Cui, Xuyang Lou
Collision-Free Vehicle Formation Control Using Graph Laplacian and Edge-Tension Function ...................... 248
Arashad Mahmood, Yoonsoo Kim
Robust Static Output-Feedback Control for Uncertain Linear Discrete-Time Systems Via the Generalized KYP 253
Lemma ....................................................................................................................................................................... 253
Xiaowei Li, Shun Yin, Huijun Guo, Okay Kaynak
Stabilization of Multi-Dimensional Wave Equation with Boundary Control Matched Disturbance ................... 259
Bao-Zhu Guo, Hua-Cheng Zhou, Cui-Zhen Yao
The Network Operator Method for Identifications of Chemical Reactions ......................................................... 265
Askhat Dieveev, Elena Sofronova, Irak Gabaidullin
Wind Turbine Model Validation: Fusion of Simulation and Measurement Data .................................................. 271
Alexander A. Stolyky
Adaptive Output-Feedback Stabilization of Non-Local Hyperbolic PDEs ............................................................ 275
Pauline Bernard, Miroslav Krstic
Input Selection Using Local Model Network Trees ............................................................................................. 281
Julian Belt, Oliver Nelles
Real-Time Heave Motion Estimation Using Adaptive Filtering Techniques ....................................................... 287
Markus Richter, Klaus Schneider, Dominik Walser, Oliver Sawodny
Joint Selection Criterion for Optimal Trajectory Planning for Robotic Manipulators Using Dynamic Programming ........................................................................................................................................................................................................................................ 294
Zeeshan Shafied, Angar Trachler
Performance and Stability for Combined Economic and Regulatory Control in MPC ......................................... 301
Johannes Philippus Maree, Lars Imsland
Online Reduction of Chattering Alarms in Industrial Operations Due to Random Noises and Oscillations ........ 308
Jiaoming Wang, Tongwen Chen
A Distributed Convergent Solution to the Ambulance Positioning Problem on a Streetmap Graph ................... 314
Yang Wang, Michele Colledanchise, Alejandro Marzinotto, Petter Ogren
Characteristic Equation for Linear Periodic Systems with Distributed Delay ...................................................... 321
Bernhard P. Lampe, Efim N. Rosenwasser, Martin Kurowski
Controller Design and Region of Attraction Estimation for Nonlinear Dynamical Systems .............................. 327
Milan Korda, Colin N. Jones, Didier Henrion
Linear Parameter-Varying Control of Complex Mechanical Systems .................................................................. 334
Christian Hoffmann, Herbert Werner
Frequency-Domain Least-Squares Support Vector Machines to Deal with Correlated Errors When Identifying Linear Time-Varying Systems ........................................................................................................ 340
John D(aris), Dario Pinza, Roland Toth
Robust Decentralized PI Control Design .................................................................................................................. 346
Petr Husak, Vladimir Kucera
On Variable Selection of a Nonlinear Non-Parametric System with a Limited Data Set: A Stepwise Algorithm .... 351
Er-Wei Bai, Kung Li, Weixiao Zhao
A New Adaptive Algorithm for Periodic Noise Control and Its Stability Analysis ................................................ 357
Yushikazu Hayakawa, Akira Nakashima, Takayoshi Yuzawa, Hirono Ichikawa
Power Optimal Gate Current Profiles for the Slow Rate Control of Smart Power ICs ........................................ 363
Mathias Blank, Tobias Gluck, Andreas Kugi, Hans-Peter Kuehn
Output Control of Nonlinear Systems with Unmodelled Dynamics ..................................................................... 369
Alexey Bobtsov, Sergey Kolyubin, Anton Pyrkin, Aleksandr Kapitonov, Nikolay Nikolaev
Dual Arm Manipulation Using Constraint Based Programming ........................................................................ 375
Yuanqiu Wang, Francisco El Vivas, Yiannis Karayiannidis, Christian Smith, Petter Ogren
An Attitude Control System for ZA-Aerosat Subject to Significant Aerodynamic Disturbances ....................... 384
Willem Herman Steyn, Mike-Alec Kearney
Optimal Modification of Dynamical Network Topology ......................................................................................... 390
Yoonsoo Kim
Model Predictive Scheduling for Container Terminals .................................................. 395
Frederik Van Boetzelaer, Ton J.J. Van Den Boom, Rudy Negeborn
A Novel Finite Time Sliding Mode Control for Robotic Manipulators ....................... 401
Yao Zhao, Yongchi Sheng, Xiangdong Liu
Randomized Incremental Least Squares for Distributed Estimation Over Sensor Networks .......................................................... 407
Keyou You, Shiji Song, Li Qiu
Semi-Active Suspension with Semi-Active Inerter and Semi-Active Damper ............... 413
Michael Z. Q. Chen, T unloung Hu, Chanyin Li, Guanrong Chen
A Task and Motion Planning Algorithm for the Dubins Travelling Salesperson Problem .......................................................... 419
Panteles Isaias, Tal Shima
H∞ Synthesis Method for Control of Non-Linear Flexible Joint Models .................... 425
Patrik Axelsson, Goelse Pipeleers, Anders Helmersson, Mikael Norrlof
H∞ Controller Design Methods Applied to One Joint of a Flexible Industrial Manipulator .......................................................... 431
Patrik Axelsson, Anders Helmersson, Mikael Norrlof
Frequency Domain Maximum Likelihood Identification of Noisy Input-Output Models .......................................................... 438
Wenting Zha, Junyong Zhai, Shumin Fei
A Magnetic Levitation System for Advanced Control Education .............................. 444
Wen Yu, Xiaou Li
Stable PID Vibration Control of Building Structures ................................................. 450
Wen Yu, Thenuzhi Suresh, Xiaou Li
Optimal Sampled-Data State Feedback Control of Linear Systems ......................... 456
Matheus Souza, Gabriela Werner Gabriel Vital, Jose C. Geromel
Novel Anti-Windup PID Controller Design under Holonomic Endpoint Constraints for Euler Lagrange Systems with Actuator Saturation .......................................................... 462
Mitsuru Kamamori, Keigo Iwagami
Frequency Domain Causality Analysis Method for Multivariate Systems in Hypothesis Testing Framework .......................................................... 468
Jing Zhang, Dong Han, Fan Yang, Hao Ye, Maoyin Chen
Backstepping Experimentally Applied to an Antagonistically Driven Finger with Flexible Tendons .......................................................... 476
Maxime Chalon, Brigitte D'Andrea-Novel
Retrofitting a Passive Vibration Isolation System with Zero-Compliance Modules ........ 483
Yoshihiko Miyasato, Yuji Ishino, Masaya Takasaki
Optimization Based Tuning of Fault Detection and Diagnosis Systems for Safety Critical Systems .......................................................... 489
Daniel Osmann
Enhancement of Dual-Rate Estimation and Its Application Demonstration ................. 495
Binh Minh Nguyen, Hiroshi Fujimoto, Yoichi Hori
Model Matching Problems for Switching Linear Systems ........................................ 501
Giuseppe Conte, Anna Maria Perdon, Elena Izattori
LPV Tonneke Vectoring for an Electric Vehicle with Experimental Validation ............ 507
Gerd Kaiser, Matthias Korte, Qin Liu, Christian Hoffmann, Herbert Werner
Cascaded Loops Control of DC Motor Driven Joint Including an Acceleration Loop .......................... 513
Pierre-Philippe Robet, Maxime Gautier
Three-Dimensional Nonlinear Path-Following Guidance Law Based on Differential Geometry .......................................................... 519
Namhnoo Cho, Youdan Kim, Sanghyuk Park
Adaptive H∞ Consensus Control of Multi-Agent Systems by Utilizing Neural Network Approximators .......................................................... 525
Adaptive Inverse Output Feedback Control of Uncertain Systems Preceded with Hysteresis Actuators .......................................................... 531
Sining Liu, Chun-Yu Su
Non-switching Reaching Law Based Discrete Time Quasi-sliding Mode Control with Application to Warehouse Management Problem .......................................................... 537
Piotr Lesniewski, Andrzej Bartoszewicz
Observability and Estimation Methods Using Synchrophasor .................................... 543
Wei Kong, Kai Sun
Global Finite-Time Stabilization for Stochastic Nonlinear Systems Via Output-Feedback .......................................................... 549
Wenting Zha, Junyong Zhai, Shumin Fei
A Microgrid Library in a General Simulation Language ........................................... 555
Johanna Salazar, Fernando Tadeo, Cesar De Prada
Strategic Zero Placement for Integral Resonant Control to Improve the Positioning Bandwidth of Nanopositioners .......................................................... 561
Douglas Russell, Andrew John Fleming, Sameet Apsale
Energy-Efficient Trajectory Planning for a Mobile Agent by Using a Two-Stage Decomposition Approach .......................................................... 567
Han Yu, Yehui Wang, Scott Bortoff, Koichiro Ueda
Functional Series Expansions for Nonlinear Input-Output Systems with Delay ........... 573
W. Steven Gray, Mahbin Thina, Erik I. Verriest
Model Predictive Regulation ..................................................................................... 579
Cesar Aguilar, Arthur J Krener
Enabling Predictive Maintenance Using Semi-Supervised Learning with Reg-D Transformer Data .......................................................... 587
Jaco Du Toit
Real-Time Model Predictive Control for Quadrotors .................................................. 593
Moses Bangura, Robert Mahony
A LASSO-Based Batch Process Modeling and End-Product Quality Prediction Method .......................................................... 601
Zhengbing Yan, Chih-Chun Chia, Wiwei Dong, Yuan Yao
Time-Varying Respiratory Elastance for Spontaneously Breathing Patients .................................................. 800
Yeong Shong Chien, Sarah P Poole, Daniel Paul Redmond, Erwin J. Van Brummelen, Santhanamhuri, Christophre Pretty, Paul D Docherty, Bernard Lambermont, Geoffrey M Shaw, Thomas Desaive, J. Geoffrey Chase

Comparison of Periodic and Event Based Sampling for Linear State Estimation ............................................. 806
Bing-Chang Wang, Minyue Fu

Data-Based Characteristics Analysis for Linear Discrete-Time Systems .......................................................... 812
Zhao Wang, Derong Liu

An Application of Multi-Parametric Programming in Integrated Circuit Automation (Sloting Problem) ............. 818

Joint Design of PI Controller and Scheduler for Embedded Control Systems .................................................. 824
Sven Reimann, Wei Wu, Steven Liu

Linking Regularization and Low-Rank Approximation for Impulse Response Modeling ................................ 830
Anna Marconato, Lennart Ljung, Yves Rolain, Johan Schoukens

Event-Triggered Control for Linear Systems Subject to Actuator Saturation ................................................... 836
Wei Wu, Sven Reimann, Steven Liu

Intra-Batch Evolution Based Process Monitoring for Multiphase Batch Processes ......................................... 842
Laping Zhao, Chunhui Zhao, Furenong Guo

Airborne Wind Energy: Airfoil-Airmass Interaction ......................................................................................... 848
Mario Zanon, Sebastien Gros, Johan Meyers, Moritz Diehl

Neural Network Evaluation of Combustion Process for Continuous Control of Small Scale Biomass Fired Boilers ........................................................................................................ 854
Stanimir Vrana, Viktor Placek, Cyril Oswald, Bohumil Sulc, Petr Y Neuman

Quantized Feedback Stabilization of Sampled-Data Switched Linear Systems .................................................. 860
Masashi Wakaiki, Yutaka Yamamoto

Sliding Mode Versus Parallel Compensator Based Control under Measurement Noise ..................................... 866
Ryszard Gessing

VOLUME 2

Optimal Design of Remote Controllers for LTI Plants Over Erasure Channels ................................................. 872
Eduardo I. Silva, Alejandro I. Maass, Francisco J. Vargas

Nearly Optimal Control Scheme for Discrete-Time Nonlinear Systems with Finite Approximation Errors Using Generalized Value Iteration Algorithm ........................................................................... 878
Qinglas Wei, Derong Liu

Opportunities and Good Practice in Control Education: A Survey .................................................................... 884
J. Anthony Rossiter, Bryn Li. Jones, Richard M. Murray, Ljubo Vlacic, Sebastian Dormido

Accelerometer-Based Online Reconstruction of Vibrations in Extremely Large Telescopes ............................. 890
Alexander Keck, Jorg-Uwe Pott, Oliver Sawodny

Arcminute Attitude Estimation for CubeSats with a Novel Nano Star Tracker ...................................................... 897
Alex Erlank, Willem Herman Steyn

Aggregation and Control of Supermarket Refrigeration Systems in a Smart Grid ............................................. 903
Rasmus Pedersen, John Schwensen, Benjamin Biegel, Jakob Stoustrup, Torben Green

Lyapunov-Based Control of the Sway Dynamics for Elevator Ropes with Time-Varying Lengths .................... 911
Mounacine Benoumane

Control Energy Consumption and System Performance in Vector Control of Voltage Source Converters .......... 917
Xiaodong Zhao, Kang Li

Stabilization of Time-Delay Markovian Jump Systems Via Probability Rate Synthesis and State Feedback .......... 923
Shan Ma, Junlin Xiong

Second-order Particle MCMC for Bayesian Parameter Inference ...................................................................... 929
Johan Dahlén, Fredrik Lindsten, Thomas Bo Schon

Particle Filter-Based Gaussian Process Optimisation for Parameter Inference .................................................. 935
Johan Dahlén, Fredrik Lindsten

Model Matching Via Stabilizing Static State Feedback ....................................................................................... 941
Eduardo Castaneda, Vladimir Kacera, Javier Ruiz-Leon

Robust Stability Analysis of Discrete-time Systems with Parametric and Switching Uncertainties ...................... 947
Dimas Peaucelle, Yoshio Ebihara

Feed-Forward Control of a Vehicle with Single-Wheel Actuators ..................................................................... 953
Jan-Erik Moseberg, Gunter Roppenocke

A Comparative Study of Water Wall Model Using a Linear Model and a Neural Network Model ....................... 959
Un-Chul Moon, Jaewoo Lim, Goon Go, Kwang Y. Lee

An Adaptive Driver Model for Driving Cycle Prediction in the Intelligent Truck .................................................. 965
Frank Alexander Bender, Hakan Uzuner, Oliver Sawodny

Fuel Efficiency Analysis for Simultaneous Optimization of the Velocity Trajectory and the Energy Management in Hybrid Electric Vehicles .................................................................................. 971
Gunter Heppeler, Marcus Sonntag, Oliver Sawodny

Response Time Driven Design of Control Systems ............................................................................................. 977
Yang Xu, Karl-Erik Arzen, Enrico Bini, Anton Cervin

Determining the Long-Term Behavior of Cell Populations: A New Procedure for Detecting Ergodicity in Large Stochastic Reaction Networks ....................................................................................... 984
Ankit Gupta, Mustafa H. Khoshnaw
Parameter Set Selection for Signal Transduction Pathway Models Including Uncertainties ................................................................. 990
Shingo Ito, Juergen Steininger, Georg Schitter

A Pilot Study of Continuous Glucose Monitoring in Critically Ill Patients: Do They Perform Well Enough for Use in Glycaemic Control? ................................................................................................................................................................................... 996
Matthew Signal, Liam Fisk, Geoffrey M Shaw, J. Geoffrey Chase

Improved Dual Decomposition for Distributed Model Predictive Control ................................................................................................................................. 1002
Pontus Giselsson

Improved Fast Dual Gradient Methods for Embedded Model Predictive Control ................................................................................................................................. 1009
Pontus Giselsson

Improved Integral Force Feedback and Structured PI Tracking Control: Application for High Speed Confocal Microscopy ................................................................................................................................................................................................. 1016
Yik Ren Teo, Douglas Russell, Sumeet Aphale, Andrew John Fleming

Nonlinear State Feedback H∞-Control of Mechanical Systems Under Unilateral Constraints ................................................................................................................................. 1023
Oscar Eduardo Montano, Yury Orlov, Yannick Aoustin

Dynamic Modeling and Image-Based Adaptive Visual Servoing of Cable-Driven Soft Robotic Manipulator ................................................................................................................................. 1029
Dyuthi Bandarupalli, Shreyas Sarang, Sumeet Aphale, Shaoxian Wang, Rolf Pfeifer

A Modified Polynomial-Based Controller for Enhancing the Positioning Bandwidth of Nanopositioners ................................................................................................................................................................................................. 1035
Mohammad Namavar, Sumeet Aphale

Road Slope Estimation in Bicycles without Torque Measurements ................................................................................................................................. 1041
Matteo Corno, Pierfrancesco Spagnolo, Sergio Savaresi

Frequency Identification of Hammerstein-Wiener Systems with Piecewise Affine Input Nonlinearity ................................................................................................................................. 1047
Adil Bouarif, Fouad Giri, Fatima-Zahra Chaoui, Aomar Amouri

Cyclist Heart Rate Control Via a Continuously Varying Transmission ................................................................................................................................. 1053
Paolo Giani, Matteo Corno, Mara Tanelli, Sergio Savaresi

Solution of the Static Reduced Decoupling Problem for Linear Systems ................................................................................................................................. 1059
Jean-François Lafay

Fault Tolerant Spacecraft Attitude Control by Multiple Control Processors ................................................................................................................................. 1075
Hao Yang, Bin Jiang, Vincent Cocquempot

Semi-Active Wide-Area Fault-Tolerant Control in Electric Power Systems ................................................................................................................................. 1095
Felix Rafael Segundo Sevilla, Petor Korba

Car Attitude Control by Series Mechatronic Suspension ................................................................................................................................. 1101
Carlos Arana, Simos Evangelou, Daniele Dini

A Clutch Based Transmission for Mechanical Flywheel Applications ................................................................................................................................. 1107
Martin Steinberger, Martin Horn, Christian Milius, Walter Rosinger

Model Reference Adaptive Control of Glucose in Type 1 Diabetes: A Simulation Study ................................................................................................................................. 1113
Martin Tarnick, Eva M. Mlikosovicova, Jan Margus, Ivan Ottinger, Tomas Ludvig

Fault Tolerant Spacecraft Attitude Control by Multiple Control Processors ................................................................................................................................. 1125
Hao Yang, Bin Jiang, Vincent Cocquempot

Filtering and Identification of Stochastic Risk Premium for Electricity Spot Price Models ................................................................................................................................. 1131
Shingo Ito, Atsushi Tanaka, Shuichi Ichinose, Email: mr.70646059@gmail.com

Adaptive Fault-Tolerant Control for Time-Delay Nonlinear Systems with Stochastic Actuator Failures ................................................................................................................................. 1137
Bing Liu, Hujin Fan

Gain Scheduling Output Feedback Control of Linear Plants with Partial Actuator Saturation ................................................................................................................................. 1143
Xiaojun Ban, Fen Wu, Xianlin Huang

Event-Triggered Least Squares Fault Estimation with Nonlinear Parameters ................................................................................................................................. 1149
Yang Liu, Zidong Wang, Xiao He, Donghua Zhou

Chaotic Artificial Bee Colony Optimization Approach to Aircraft Automatic Landing System ................................................................................................................................. 1155
Qinan Luo, Huibin Duan

Semiactive Virtual Control Method for Robots with Regenerative Energy-Storing Joints ................................................................................................................................. 1161
Hanz Richter, Dan Simon, Ton Van Den Bogert

Event-Triggered Control Over Noisy Feedback Channels ................................................................................................................................. 1168
Liangzhi Zhang, Michael Z. Q. Chen, Chuying Li, Zhan Shu

Suboptimal Kalman Filter for Dual Estimation under Dynamical Uncertainties ................................................................................................................................. 1174
Masayasu Murata, Hidehisa Nagano, Kanji Kashiho

Energy Amplification of Streamwise Constant Channel Flows over Riblets ................................................................................................................................. 1180
Shi Zhao, Stephen Duncan

Sliding Mode and PID Control of a Dual Stage Actuator for Precision Positioning ................................................................................................................................. 1186
Shingo Ito, Juergen Steininger, Georg Schitter
Dual Formulation of Controlled Markov Diffusions and Its Application .................................................................1192
Distributed Nonlinear Consensus in the Space of Probability Measures .................................................................1200
A Novel Visualization System for ICU Clinical Activity Tracking .........................................................................1207
Leader-Following Output Consensus in a Network of Linear Agents with Communication Noises ..........................1213
Factorizing the Monodromy Matrix of Linear Periodic Systems ...............................................................................1219
Estimation of Reaction Torque and Compensation for Elongation of Wire for Wire Actuated Robotic Forceps .......1225
Control of Spark Ignition IC Engines Operating on Alternative Fuel Mixtures ..................................................1231
Adaptive "quasi" Repetitive Controller for the Fundamental Frequency Estimation of Periodic Signals ...............1237
Collision Avoidance with Automatic Braking and Swerving ................................................................................1243
Integral Input-To-State Stability for Interconnected Discrete-Time Systems ..................................................1249
Robust PI Based Set-Point Learning Control for Batch Processes Subject to Time-Varying Uncertainties and Load Disturbance ...........................................................................................................1292
Robust Adaptive Backstepping Control of Second-Order Nonlinear Systems with Non-Triangular Structure Uncertainties ..................................................................................................................1298
Sliding Mode Prediction Control for 3D Path Following of an Underactuated AUV .............................................1304
Control of a Piezoelectric Actuator Using a Bounded-Adaptive Backstepping Scheme and Sliding-Mode Observer ........................................................................................................................................1310
Novel Reciprocal Self-Sensing Techniques for Tapping-Mode Atomic Force Microscopy .....................................1317
Graph Decomposition Based Design and Analysis of Consensus Protocols ....................................................1323
Hybrid Terrestrial and Aerial Quadrotor Control ......................................................................................................1329
Rejection of Heave-Induced Pressure Fluctuations at the Casing Shoe in Managed Pressure Drilling ..................1335
Social Evolutionary Programming Algorithm on Unit Commitment in Wind Power Integrated System ................1341
Research on Dynamic Process of DC Micro-Grid under Hierarchical Control ..................................................1347
Nuclear Norm Subspace Identification (N2SID) for Short Data Batches .................................................................1352
Phase-locked Loop-based Proportional Integral Control for Spiral Scanning in an Atomic Force Microscope .......1358
The NEMO HD Attitude Determination and Control System: Experimental Mode ............................................1364
Modelling and Controller Design of Resonant Thermoacoustic Solar AC Power Generators ...............................1370
Position-Trajectory Control System for Unmanned Robotic Airship .....................................................................1378
Formation Control of Wheeled Robots in the Port-Hamiltonian Framework ..................................................1384
Adaptive Filtering Approach to Dynamic Weighing: A Checkweigher Case Study .............................................1390
Adaptive Predictive Control of Transient Vibrations of Cantilevers with Changing Weight ................................1396
Online Algebraic Identification of the Payload Changes in a Single-Link Flexible Manipulator Moving under Gravity .......................................................... 1405

Non-Contact Manipulation for Automated Protein Crystal Harvesting Using a Rolling Microrobot .......................................................... 1411
Boel Pieters, Hsi-Wen Tung, David F. Sargent, Bradley Nelson

Real-Time Application of Multivariate Statistical Methods for Early Event Detection in an Industrial Slurry Stripper ............................................. 1417
Thomas Darkow, Rainer Dittrar, Helge Timm

Modeling and Control of Rotor-Flying Multi-Joint Manipulator .......................................................... 1423
Bing Yang, Yu-Qing He, Juanda Han, Guangjun Liu

Optimizing Linear Heterogeneous Networks by Output Homogenization .......................................................... 1429
Chun-Liang Lin, Ping-Min Hsu

New Result on Low-Order Controller Design for First-Order Delay Processes Via Eigenvalue Assignment .......................................................... 1435
Honghai Wang, Jianchung Liu, Feisheng Yang, Yu Zhang

State Estimation Based on Self-Triggered Measurements .......................................................... 1441
Nacim Mokrane, Christine Prieur

Model-Based Rack Force Estimation for Electric Power Steering .......................................................... 1447
Steve Fankem, Thomas Wieckicher, Steffen Muellner

Delay-Dependent Regional Stabilization of Nonlinear Quadratic Time-Delay Systems .......................................................... 1453
Carlos E. De Souza, Daniel Coutinho

Reusing of Modules for Mechatronic Modeling and Evaluation of Manufacturing Systems in the Conceptual Design and Basic Engineering Phase .......................................................... 1459
Michael Weyrich, Philipp W. Klein, Frank Strasser

Dynamics Modeling Signaling Pathway Regulating EGF-Induced Cell Adhesion .......................................................... 1465
Baiqiao Yang, Yung Xi, Bo Song, Zhiyong Sun, Lianliang Chen, Marcela P. Garcia, Jun Xi

Robust Microscale Grasping Using a Self Scheduled Dynamic Controller .......................................................... 1471
Mokrane Boudaoud, Marcelo Gaudenzi De Faria, Yassine Haddah, Sinan Halilsoy, Yann Le Gorrec, Philippe Lutz, Stephane Regnier

Global Swarming While Preserving Connectivity Via Lagrange-Poincare Equations .......................................................... 1478
Marco Trenn, Mark W. Spong

Energy Storage Requirements for Near-Optimal Smooth Reactive Control of a Wave Energy Device .......................................................... 1486
Zhiyang Zhao, Zongli Lin

Energy Storage Requirements for Near-Optimal Smooth Reactive Control of a Wave Energy Device .......................................................... 1492
Umesh Korde

Multi-Frequency Atomic Force Microscopy: A System-Theoretic Approach .......................................................... 1498
Naveen Shamsudin, Bradley Nelson, Hugo Rothaizien, Abu Sebastian

Decentralized Predictive Control for 1D Cascaded Systems of Conservation Laws .......................................................... 1504
Van Thang Pham, Laurent Lefevre, Didier Georges, Gildas Besancon

Finite Element Approximation and Input Parameterization for the Optimal Control of Current Profiles in Tokamak Plasmas .......................................................... 1510
Zhigang Ren, Chao Xu, Qun Lin, Ryan Loxton, Kok Lay Teo, Jian Chu

Towards a Sustainable Development Maturity Model for Green Virtual Enterprise Breeding Environments .......................................................... 1516
David Romero, Arturo Molina

Semi-Automatic Coupling of an Agricultural Tractor and a Trailer .......................................................... 1524
Ville Talhuri Matikainen, Juha Rautman, Arto Visala

Fast Algorithm of Robust Kalman Filter Via l, Regression by a Closed Form Solution .......................................................... 1530
Yasuaki Kameda, Yasuharu Iriuuki, Masaki Yamakita

Latching Control Strategies for a Heaving Buoy Wave Energy Generator in a Random Sea .......................................................... 1536
Florimian Saufle, Yann Creff, Jean-Christophe Gilletteaux, Pauline Bozonnet, Paolinii Toma

Controllability of the 1D Schrodinger Equation by the Flatness Approach .......................................................... 1543
Philippe Martin, Lionel Rosier, Pierre Bouchon

Flatness-Based Feedforward Control of Wind Turbines Using Lidar .......................................................... 1549
David Schlipf, Po Wen Cheng

Optimal Normalized Weighting Factor in Iterative Feedback Tuning of Step Input Responses .......................................................... 1555
Charles Zhe Lu, Sheng Xie, Chao Deng

Minimum Energy Control of Fractional Descriptor Positive Discrete-Time Linear Systems with Bounded Inputs .......................................................... 1561
Tadzuz Kizcorczak

Control of an Electromechanical Control Actuation System Using a Fractional Order Proportional, Integral, and Derivative-Type Controller .......................................................... 1567
Bulent Oztan

Event-Based Predictive Control Triggered by Input and Output Deadband Conditions .......................................................... 1573
Andrzej Pawlowski, Jose Luis Guzman, Manuel Berenguier, Sebastian Dormido, Ignacio Fernandez

System Identification for Low-Cost Small-Scale Helicopters .......................................................... 1579
Yashwin Reddy, Edward Boje

Multilinear Approximation of Nonlinear State Space Models .......................................................... 1585
Kai Krupka, Gery Pungalos, Gerwald Lichtenberg

Coordinated Closed-Curve Path Following Control of Multi-Unicycle in a Time-Invariant Flow Field .......................................................... 1591
Yangyang Chen, Yu-Ping Tian, Ya Zhang

Synchronizing Linear Heterogeneous Networks by Output Homogenization .......................................................... 1597
Saman Khodaverdian, Jurgen Adamy
On Gaussian Filters for Continuous-Discrete Nonlinear Systems ................................................................. 2188
Tohru Katayama

VOLUME 6

Non-Constant Prediction-Step for Processes with Multi-Scale Dynamics
Michael James Tippett, Chee Keong Tan, Jie Bao

Inverse Kinematics of Serial Manipulators in Cluttered Environments Using a New Paradigm of Particle Swarm Optimization
Baccardo Falconi, Rafiqul Grandhi, Claudio Melchiorri

ToMFIR-Based Detection and Estimation for Incipient Actuator Faults in a Class of Closed-Loop Nonlinear Systems
Yunkai Wu, Bin Jiang, Donghua Zhou, Ningyun Lu, Zehui Mao

Optimization for 3D Model-Based Multi-Camera Deployment
Xuebo Zhang, Jose Alarcón, Xiang Chen

Applications of Intelligent Machine Vision in Plant Factory
Yauco Hendrawan, Dimas Farrianda Al Raza, Harihiko Murase

Control Oriented System Identification for Performance Management in Virtualized Software System
Andong Liu, Li Yu, Wen-Jin Zhang

A Fuzzy Optimal Sliding-Mode Guidance for Intercepting Problem
Zhiwei Hou, Mao Su, Yongji Wang, Lei Liu

Hierarchical Network Identification of Large-Scale Systems - An Approach Based on Dissipation Equalities
Chia Chi Kojima

Nonlinear Luenberger Observer Design Via Invariant Manifold Computation
Shun Kamoi, Squire Dougie, James A. Restie, Christopher Pretty, Paul D. Docherty, Yeong Shiong Chiew, Thomas Desaive, Geoffrey M. Shaw, J. Geoffrey Chase

Motion Planning for Multi-robot Coordination on Representation Space
Jianbo Su, Tuanjia Zhang

Managing Patient-Specific Mechanical Ventilation: Clinical Utilization of Respiratory Elastance (CURE) - Model and Software Development
Daniel Paul Redmond, Shaun M. Davidson, Hamish Laing, Richard White, Zaizi Redzi, Yeong Shiong Chiew, Sarah F. Poole, Nor Salwa Damanhuri, Thomas Desaive, Geoffrey M. Shaw, J. Geoffrey Chase

Collaboration Platform for Sustainable Wind Energy Distribution Network
Shinym Y. Nof, Hoo Sang Ko, Elsan Jahantou"r

Attitude Coordinated Tracking of Multiple Spacecraft with Control Input Saturation
Qingling Wang, Huijun Gao, Jiaho Qin, Changyu Yu

Fault-Tolerant Control of a Class of Switched Time-Delay Systems with Average Dwelling Time Method
Ying Jin, Jun Fu, Youmin Zhang, Yuanwei Jing, Xiao-Long Qian, Tao Ren

Robust Stability and Stabilization of Uncertain Fractional-Order Descriptor Nonlinear System
Chun Yin, Yangquan Chen, Shouming Zhong

Fractional-Order Power Rate Type Reaching Law for Sliding Mode Control of Uncertain Nonlinear System
Chun Yin, Yangquan Chen, Shouming Zhong

Switched Model Predictive Control for Networked Control Systems with Time Delays and Packet Disordering
Andong Liu, Li Yu, Wen-Jin Zhang

Process Identification Using the Relay Feedback with a Fractional Order Integrator
Zhuo Li, Chun Yin, Yangquan Chen, Jiaqiu Liu

Robust Tracking Control for a Class of Perturbed and Uncertain Reaction-Diffusion Equations
Andrea Cristofaro

A Fractional Order Impedance Model to Capture the Structural Changes in Lungs
Hong Jang, Kwang-Ki Kim, Jay H. Lee, Richard D. Braatz

Regularized Maximum Likelihood Estimation of Sparse Stochastic Monomolecular Biochemical Reaction Networks
Chun-Lin Chen, Mi-Ching Tsai
On the Stabilizability of Continuous-Time Systems Over a Packet Based Communication System with Loss and Delay .................................................................................................................................................................................................4946
Fault-Tolerant Control of a Unmanned Aerial Vehicle with Partial Wing Loss .................................................................................................................................................................................................................................................................................................................................4952
Waan Beeton, Jacobus Adriaan Albertus Engelbrecht

High Order Sliding Mode Differentiator for Dynamical Inversion of Non-Involutive Systems .................................................................................................................................................................................................................................................................................................................................4959
Jean Pierre Barbot, Driss Bouat, Krishna K. Busawon, Mangal Kothari

Explicit Model Predictive Control of Bidirectional DC/DC Converter for Ultracapacitors Energy Storage Unit Applied to Light Rail Vehicle .................................................................................................................................................................................................................................................................................................................................................................................................4965
Bode-Like Control Loop Performance Index Evaluated for a Class of Fractional-Order Processes .................................................................................................................................................................................................................................................................................................................................................................................................4971
Milos Schlegel, Martin Cech, Radek Skarda

An Investigation of Energy Storage Possibilities in Single Family Houses for Smart Grid Purposes .................................................................................................................................................................................................................................................................................................................................................................................................4977
Palle Andersen, Tom S. Pedersen, Kirsten Moelgaard Nielsen

Chattering Free Sliding Mode Control of Pitch Angle for Direct Driven PM Wind Turbine .................................................................................................................................................................................................................................................................................................................................................................................................4983
Xin Wang, Wandi Zhu, Bin Qin, Cong Song

Planning Flexible Human Resource Capacity in Volatile Markets .................................................................................................................................................................................................................................................................................................................................................................................................4989
Wilhelm Bauer, Moritz Hammerle, Stefan Gerlach, Tobias Strolin

Design and Test of Discrete Time Adaptive Backup Flight Control Laws .................................................................................................................................................................................................................................................................................................................................................................................................4995
Andreas Myleus, Daniel Simon, Peter Rosander

Delay and Backlog Bounds for an Aggregation System in Wireless Networks .................................................................................................................................................................................................................................................................................................................................................................................................5001
Damien Brecq, Jean-Philippe Georges, Thierry Divoux

Le Zhu, Zhi-Huan Song, Junhui Li, Zujiang Ge, Li Zhao

Implicit Dual Adaptive Control for Systems with Functional Uncertainties .................................................................................................................................................................................................................................................................................................................................................................................................5013
Ladislav Kral, Miroslav Simandl, Miroslav Filipr

A Modeling Approach for HVAC Systems Based on the LoLiMoT Algorithm .................................................................................................................................................................................................................................................................................................................................................................................................5019
Jakob Rehrl, Daniel Schwingshackl, Martin Horn

A Blended Autopilot for Dual Control Missile Using Generalized Predictive and Adaptive Terminal Sliding Mode Control .................................................................................................................................................................................................................................................................................................................................................................................................5026
Yifei Chang, Ren Yuan, Guodong Fan, Ruijiang Yi

Integration of Fault Diagnosis and Control by Finding a Trade-Off between the Observability of Stochastic Faults and Economics .................................................................................................................................................................................................................................................................................................................................................................................................5032
Yuncheng Du, Hector M. Budman, Thomas Duever

Finite-Time Supervisory Stabilization for a Class of Nonholonomic Mobile Robots under Input Disturbances .................................................................................................................................................................................................................................................................................................................................................................................................5038
Matteo Guerra, Denis Efimov, Gang Zheng, Wilfrid Perruqueti

Artificial Blood Glucose Control Using a DDE Modelling Approach .................................................................................................................................................................................................................................................................................................................................................................................................5044
Maxime Pena, Horse Gueguen, Aziz Belmiloudi

Time-Varying Gain Second Order Sliding Mode Differentiator .................................................................................................................................................................................................................................................................................................................................................................................................5050
Carlos Vazquez, Stanislav Aranovskiy, Leonid Freidovich

Don’t Waste a Good Disaster: A Systems Approach to an Ethics of International Institutional Failures .................................................................................................................................................................................................................................................................................................................................................................................................5056
Larry Stapleton, Peter Kopacek, Edmond Hajrizi, Anita Kealy

Distributed MPC for Frequency Regulation in Multi-Terminal HVDC Grids .................................................................................................................................................................................................................................................................................................................................................................................................5062
Paul Mc Namara, Ronan Meere, Terence O’Donnell, Sean McLoone

Model-Based Testing of PLC Software: Test of Plants’ Reliability by Using Fault Injection on Component Level .................................................................................................................................................................................................................................................................................................................................................................................................5068
Susanne Roesch, Dmitry Tikhonov, Daniel Schutz, Birgit Vogel-Heuser

The Effect of Inaccurate Traffic Data for Ramp Metering: Comparing Loop Detectors and Cameras Using Information Utility .................................................................................................................................................................................................................................................................................................................................................................................................5075
Gerdien Klunder, Henk Taale, Leon Kester, Serge P. Hoogendoorn

Full-State Autopilot-Guidance Design under a Linear Quadratic Differential Game Formulation .................................................................................................................................................................................................................................................................................................................................................................................................5083
Mitali Levy, Tal Shima, Shaul Gutman

Engineering Management in Kosovo .................................................................................................................................................................................................................................................................................................................................................................................................5089
Peter Kopacek, Edmond Hajrizi

A Cost Oriented Humanoid Robot Motion Control System .................................................................................................................................................................................................................................................................................................................................................................................................5094
Peter Kopacek, Jacky Balles, Markus Schorghuber

H∞ Fault Tolerant Control of Wind Turbine System with Actuator Faults .................................................................................................................................................................................................................................................................................................................................................................................................5100
Yun Tao Shi, Qi Kou, De Hui Sun, Zhengyi Li, Shijuan Qiao, Yanjiao Hou

An Artificial Immune Systems (AIS)-based Unified Framework for General Job Shop Scheduling .................................................................................................................................................................................................................................................................................................................................................................................................5106
Henry Lau, X. Qiu

Backstepping Observers for Periodic Quasi-Linear Parabolic PDEs .................................................................................................................................................................................................................................................................................................................................................................................................5112
Lukas Judachowski, Thomas Meurer, Andreas Kugi

Zeros of Transfer Functions in Network Control with Higher-Order Dynamics .................................................................................................................................................................................................................................................................................................................................................................................................5118
Ivo Herman, Dan Martinec, Michael Sebek

Multibjective Cuckoo Search Applied to Radial Basis Function Neural Networks Training for System Identification .................................................................................................................................................................................................................................................................................................................................................................................................5124
Helio Vicente Holmman Ayala, Leandro Dos Santos Coelho

Constructive State Space Model Induced Kernels for Regularized System Identification .................................................................................................................................................................................................................................................................................................................................................................................................5130
Tianshi Chen, Lennart Ljung

Stochastic MPC for Systems with Both Multiplicative and Additive Disturbances .................................................................................................................................................................................................................................................................................................................................................................................................5136
Qifeng Cheng, Mark Cannon, Basil Kouvaritakis, Martin Evans
Characterization of Power Systems Near Their Stability Boundary by Lyapunov Direct Method .......................................................... 5142
Igor Yadykin, Dmitry Katera, Aleksey Borisovich Ishakov, Vladislav Shipilev

High-Precision Synchronization in Wireless Sensor Networks with No Tuning in the Field ................................................................. 5148
Alberto Leva, Federico Terranee

Toward a Rational Matrix Approximation of the Parameter-Dependent Riccati Equation Solution .................................................. 5154
J. Guerra, Mohamed Yagoubi, Philippe Chevre

Virtual Reference Feedback Tuning for Industrial PID Controllers .......................................................... 5161
Simone Formentini, Marco Campi, Sergio Savarese

An Indirect Method for Optimal Guidance of a Glider .......................................................... 5167
Romain Pepy, Bruno Heritse

Variance Results for Parallel Cascade Serial Systems .................................................................................................................. 5173
Niklas Everett, Hakan Hjalmarsson, Cristian Rojas

Air-Path Model Predictive Control of a Heavy-Duty Diesel Engine with Variable Valve Actuation .......................................................... 5179
Esteban R. Gelso, Johan Lindberg

Adaptive Neural Network Control of Uncertain State-Constrained Nonlinear Systems .......................................................... 5185
Zhong-Liang Tang

Human Elbow Joint Torque Estimation During Dynamic Movements with Moment Arm Compensation Method .................................. 5191
Ryo Hosoda, Gentiana Venture

Power-Consumption Analysis through Web-Based Visual Data Exploration .......................................................................................... 5197
Daniel Perez, Ignacio Diaz Blanco, Abel A. Cuadrado, Francisco J. Garcia-Fernandez, Alberto Benjamin Diez Gonzalez, Manuel Dominguez

Bidding Strategies for Renewable Energy Generation with Non Stationary Statistics .......................................................... 5203
Antonio Giannitrapani, Gianni Giaquinta, Giuseppe Mulas, Monica Turrilli

Design and Performance Assessment of Setpoint Feedforward Controllers to Break Tradeoffs in Univariate Control Loops .......................................................... 5209
Zhenpeng Yu, Jiandong Wang, Biao Huang, Jun Li, Zhenfu Bi

A Preliminary Study of Barrier Stopping Points in Constrained Nonlinear Systems .......................................................... 5215
Willek Esterhuizen, Jean Levine

MIMO H∞ Control for Power Source Coordination - Application to Energy Management Systems of Electric Vehicles .......................................................... 5220
Antonio Giannitrapani, Gianni Giaquinta, Giuseppe Mulas, Monica Turrilli

Autonomous Exploration of Large Unknown Indoor Environments for Dense 3D Model Building .......................................................... 5227
Ivan Maurovic, Marijus Dakulovic, Ivan Petrovic

Qualitative Diagnosis Method Based on Process History in Semiconductor Manufacturing Process .......................................................... 5233
Mohamad Chakaroun, Mohand Arab Djiezi, Mustapha Ould Adje, Jacques Pinatou

The Nonlinear Heat Equation with State-Dependent Parameters and Its Connection to the Burgers’ and the Potential Burgers’ Equation .......................................................... 5239
Christoph Josef Bauck, Jan Dimon Bendsen, John Leth, Jan Tommy Gravdahl

Modelling and Formal Verification of Timing Aspects in Large PLC Programs .......................................................................................... 5245
Borja Fernandez Adiego, Daniel Darvin, Enrique Blanco Vinuela, Jean-Charles Tournaire, Victor Manuel Gonzalez Suarez, Jan Olaf Blech

A New Method of Self-Calibration of Hand-Eye Systems Based on Active Vision .......................................................... 5252
Anhtu Nguyen, Michio Sugeno, Michel Dambrine, Jimmy Lauber

Feedback Linearization Based Control Approach for Turbocharged Air System of SI Engine: Toward a Fuel-Optimal Strategy .......................................................... 5258
Anhtu Nguyen, Michio Sugeno, Michel Dambrine, Jimmy Lauber

Intelligent Cyber-Enterprise in the Production Context .................................................................................................................. 5264
Ioan Dumitrache, Simona Iuliana Carumariu

Scenario-Based MPC for Energy Schedule Compliance with Demand Response .......................................................................................... 5270
Theodor Sebastian Borsche, Franke Oldewurtel, Goran Andersson

Slip-Constrained Model Predictive Control Allocation for an All-Wheel Driven Electric Vehicle .......................................................... 5276
Thomas Buchle, Knut Grutzenk, Michael Buchholz, Klaus Dietmayer

VOLUME 7

Noise Covariance Estimation for Time-Varying and Nonlinear Systems .......................................................................................... 5282
Ming Ge, Eric C. Kerrigan

On Robust Control System Design for Plants with Recycle .................................................................................................................. 5288
Olawulafi Taiwo, Ayorinde Bamimore, Samuel Adeyemo, Rabiul B. King

Comparison of Controllability Conditions for Models of Antiangiogenic and Combined Anticancer Therapy .......................................................... 5294
Andrzej Swietnian, Jerzy Klamka

Stabilizer Fault Emergency Control Using Reconfiguration to Preserve Power System Stability .......................................................... 5300
Andreas S. Pedersen, Jan Richter, Mojtaba Tabatabaei, Hjortur Johannsson, Mogens Blanke

Means to Enable Enterprise Interoperation: CIMOSA Object Capability Profiles and CIMOSA Collaboration View .......................................................... 5306
Kurt Kosanke, F. Vernadat, Martin Zelm

Optimistic Planning for the Near-Optimal Control of General Nonlinear Systems with Continuous Transition Distributions .................................................................................................................. 5314
Lucian Busoniu, Levente Tamacs
Model-Based FDIR: From Paper to Planes ......................................................................................................................5320
Control Induced Explicit Time-Scale Separation to Attain DC Voltage Stability for a VSC-HVDC Terminal ..................................................5326
LMI Conditions for Designing Rational Nonlinear Observers with Guaranteed Cost ..............................................................5332
A Family of High-Performance Solvers for Linear Model Predictive Control ..................................................................................5338
Rescheduling of Interacting Machines in Automated Container Terminals ..................................................................................5344
Trajectory Planning for AGVs in Automated Container Terminals Using Avoidance Constraints: A Case Study ..........................5351
Implicit Regulator Calculation for Regular MIMO-Systems with Predictive Functional Control Demonstrated at a Three Tank System ..............................................................................................................................5357
Modified Generalized Explicit Guidance for Midecourse with Near-Zero Lateral Acceleration in Terminal Phase ....................................5363
Joint Design of Stochastically Safe Setpoints and Controllers for Nonlinear Constrained Systems by Means of Optimization ..........................................................................................................................5381
Discretization of Fractional-Order Differentiators and Integrators ..................................................................................................5387
A Control Approach for Performance of Big Data Systems .................................................................................................5393
Networked Embedded Control of Modular Robot Manipulators Using VDC .................................................................................5399
Iterative Learning Control for Periodic Systems Using Model Predictive Methods with Adaptive Sampling Rates ........................................5411
Micro-Climate Control in a Grow-Cell: System Development and Overview ..................................................................................5417
Predictive Control of Actively Articulated Mobile Robots Crossing Irregular Terrains ................................................................................5423
Modeling Framework for Investigating the Influence of Amino Acids on the Planktonic-Biofilm Transition of Pseudomonas Aeruginosa ...........................................................................................................................................5429
Understanding PID Design through Interactive Tools .................................................................................................................5435
Energy Management of Parallel Hybrid Electric Vehicles Based on Stochastic Model Predictive Control ..................................................5441
On Translation of LD, IL and SFC Given According to IEC-61131 for Hardware Synthesis of Reconfigurable Logic Controller ........................................................................................................................................5447
Adaptive Non-Linear Control of Three-Phase Four-Wire Shunt Active Power Filters for Unbalanced and Nonlinear Loads ..................................................................................................................................................5449
Classification Efficiency in Wheelchair Rugby: Throwing Analysis .................................................................................................5452
Safety, Constraints and Anti-Windup in Closed-Loop Anaesthesia ..................................................................................................5484
Passive Phase Design of a Pumping Kite Wind Generator .........................................................................................................5490
A Filtered Smith Predictor Based Subspace Predictive Controller .................................................................................................5496
Elastography ................................................................................................................................................................................5453
Magic DRAGONS: A Protocol for Accurate Glycaemic Control in General Wards ........................................................................5459
On Translation of LD, IL and SFC Given According to IEC-61131 for Hardware Synthesis of Reconfigurable Logic Controller ........................................................................................................................................5447
Adaptive Non-Linear Control of Three-Phase Four-Wire Shunt Active Power Filters for Unbalanced and Nonlinear Loads ..................................................................................................................................................5449
Classification Efficiency in Wheelchair Rugby: Throwing Analysis .................................................................................................5452
Safety, Constraints and Anti-Windup in Closed-Loop Anaesthesia ..................................................................................................5484
Passive Phase Design of a Pumping Kite Wind Generator .........................................................................................................5490
A Filtered Smith Predictor Based Subspace Predictive Controller .................................................................................................5496
A Left Heart Ventricle Simulator Manufactured by 3D Printing ..........................................................5502
On Stock Trading Over a Lattice Via Linear Feedback ........................................................................5508
Model Predictive Control Combined with Model Discrimination and Fault Detection .........................5514
Seunggyun Cheong, Ian Manchester

Water Demand Forecasting for the Optimal Operation of Large-Scale Drinking Water Networks: The Barcelona Case Study ........................................................................................................5520
Mauricio Esteban Cea Garrido, Graham G. Goodall, Rodrigo Carvajal, Richard B. Kaulbars, Robert S. Karlsson

Extremum-Seeking for Adaptation of Urban Traffic Signal Control ......................................................5526
Ronny Jonathan Katadinauta, Will Moase, Chris Munzie, Lele Zhang, Tom Garoni

Robust Model Predictive Controller Design ..........................................................................................5532
Daniel Vozak, Vojtech Vesely

Multiperiod Mean-Variance Portfolio Optimization with General Correlated Returns ..........................5538
Jianjun Gao, Duan Li

Robust Two Degree-Of-Freedom Control for MIMO System with Both Model and Signal Uncertainties .................................................................................................................................5544
Yangmin Xie, Andrea G. Alleyne

Discrete-Time Frequency-Shaped Sliding Mode Control for Audio-Vibration Rejection in Hard Disk Drives .........................................................................................................................................5552
Minghui Zheng, Xu Chen, Masayoshi Tomizuka

Reducing the Effect of Outlying Data on the Identification of Insulinaemic Pharmacokinetic Parameters with an Adapted Gauss-Newton Approach ..............................................................................5558
Paul D Docherty, Rebecca A. L. Gray, Erin J Mansell

Channel Estimation and Interpolation for Fourth Generation Mobile Broadband Telecommunications ..................................................5564
Soma Tayamon, Jonas Sjoberg

Towards Load Control of Populations of Air Conditioners with Guaranteed Comfort Margins ..................5570
Nariman Mahdavi, Cristian Perfumo, Julio H. Braslavsky

An Observer with Measurement-triggered Jumps for Linear Systems with Known Input ..........................5576
Francesco Ferrante, Frederic Gouaisbaut, Ricardo G. Sanfelice, Sophie Tarbouriech

Modelling of Selective Catalytic Reduction Systems Using Discrete-time Linear Parameter Varying Models ...........................................................................................................................................5582

Vector Field Guided Auto-Landing Control of Airship with Wind Disturbance .......................................5588
Ji-Wook Kwon, Jin Hyo Kim, Jiwon Seo

Adaptive Stabilization of Stochastic Nonholonomic Systems with Uncertain Parameters and Time-Varying Coefficients ..................................................................................................................5594
Eloy Garcia, Panos J. Antsaklis

Optimal Model-Based Control with Limited Communication ..................................................................5600

Analytical Solution to the Minimum Energy Consumption Based Velocity Profile Optimization Problem with Variable Road Grade ........................................................................................................5606
Engin Ozatay, Umit Ozgur, John Michelini, Dimitar Filev

Proposal of Block Bidding for Large-Scale Wind Power Energy ................................................................5612
Jian Geng, Kaiqiang Zhang, Zhenglin Yang, Changsheng Chen, Yaxian Zheng

sEMG Based Movement Quantitative Estimation of Joins Using SVM Method ..........................................5618
Dongsheng Liu, Xingang Zhao, Dan Ye, Yuren Zhao, Zhenwei Wu

Research on the Load Dispatching Model to Deal with the Uncertainty of Wind Power ..........................5624
Jiantao Liu, Ke Wang, Shengchen Yang, Lingling Pan

Framework for Future Smart Grid Operation and Control with Source-Grid-Load Interaction ..................5630
Jianguo Yao, Shengchun Yang, Ke Wang, Yaping Li, Zhenglin Yang, Taiyou Yong, Lingling Pan

Model-Free Adaptive Dynamic Programming for Optimal Control of Discrete-Time Affine Nonlinear System .........................................................................................................................................5636
Zhongxu Xia, Dongbin Zhao, Huaqin Tang

A Generic Dynamically Substructured System Framework and Its Dual Counterparts ..............................5642
Guang Li

On Mobilizing Processes of Cyber Movement Organizations ..................................................................5648
Tao Wang, Kainan Cui, Fei-Yue Wang, Zhong Liu, C. L. Philip Chen, Jie Zhang

Implementing 3-D High Maneuvers with a Novel Biomimetic Robotic Fish ............................................5653
Zhengxing Wu, Junzhi Yu, Zhongshuai Su, Min Tan

An Interactive Multi-Agent Based Real Time Control Framework for the Interconnected Power Grid .................................................................................................................................5659
Taitong Yung, Jiangqiao Yao, Shengchen Yang

A GNSS Interference Identification and Tracking Based on Adaptive Fading Kalman Filter ......................5665
Chang Hu Kang, Sun Young Kim, Chan Gook Park

PET Image Reconstruction Based on a Constrained Filter .......................................................................5671
Hongxia Wang, Xin Chen, Li Yu

Continuous-Time Distributed Convex Optimization with Set Constraints .............................................5676
Shuai Liu, Zhiqiong Qiu, Lilhua Xue

Design of a Pole Placement Active Power Control System for Supporting Grid Frequency Regulation and Fault Tolerance in Wind Farms ................................................................................5682
Changshun Zhang, Henry Hung

Adaptive Control of Bivalirudin in the Cardiac Intensive Care Unit ..........................................................5688
Qi Zhao, Thomas Edrich, Ioannis Paschalidis
Acoustic Emission, a New Sensor for Monitoring Industrial Crystallization Processes ................................................................. 6094
Gilles Favoule, Xingjun Wang, Yannina Ouahbas

FlipBot: A Lizard Inspired Stunt Robot .................................................................................................................. 6101
Callen Fisher, Amir Patel

Comparison of Mental and Theoretical Evaluations of Remotely Controlled Mobile Manipulators .............................................. 6107
Cong Dung Pham, Huynh Nhat Trinh Phan, Phal Johan Fron

A Distributed Obstacle Avoidance MPC Strategy for Leader-Follower Formations .................................................. 6113
Giuseppe Franza, Walter Lucia, Francesco Tedesco, Valerio Scordamaglia

Output Regulation of Hybrid Linear Systems with Unpredictable Jumps .............................................................................. 6119
Daniele Carnevale, Sergio Galeani, Laura Menini, Mario Sassano

Delay-Range-Dependent Robust BIBO Stabilization of 2D Discrete Delayed Systems Via LMI Approach .............................. 6125
Limin Wang, Xi Chen, Furon Gao

Improving Automatic Target Recognition with Forward Looking Sonar Mosaics ........................................................................ 6131
Fausto Ferreira, Vladimir Djalic, Michele Micheli, Massimo Caccia

Design of Measurement Noise Filters for PID Control ........................................................................................................ 6137
Rainer Manuel Schaich, Matthias A. Muller, Frank Allgower

Robust Semiclassical Internal Model Based Regulation for a Class of Hybrid Linear Systems .................................................. 6143
Daniele Carnevale, Sergio Galeani, Laura Menini, Mario Sassano

Identification and Control of an Injection Moulding Machine ........................................................................................................ 6149
Sven-Olaf Lindert, Gerald Reindl, Kurt Schlacher

Predictive and Robust Fault-Tolerant Control for Takagi-Sugeno Systems ........................................................................... 6155
Marcin Witczak, Christophe Aubrun, Jozef Korbiacz

Errors-In-Variables Identification in Bilaterally Coupled Systems with Application to Oil Well Testing ........................................ 6161
Michal Mansoori, Arne Dankers, Paul M. J. Van Den Hof

Knowledge-Intensive Teaching Assistance System for Industrial Robots Using Case-Based Reasoning and Explanation-Based Learning ........................................................................................................ 6167
Guanfeng Sun, Tetsuo Sawaragi, Yukio Horiguchi, Hiroaki Nakamishi

Nonquadratic Stabilization of Switching TS Systems .................................................................................................................. 6173
Zsofia Lendek, Paula Raica, Jimmy Lauher, Thierry Marie Guerra

A Model-Free Approach for Auto-Tuning of Model Predictive Control ..................................................................................... 6179
Quang N. Tran, Joni Scholten, Leyla Oztan, A. C. P. M. Baks

A Variance Reduction Technique for Identification in Dynamic Networks .......................................................................................... 6185
Bilal Ganex, Arne Dankers, Paul M. J. Van Den Hof

Adaptive Control for Ionic Polymer-Metal Composite Actuator Based on Continuous-Time Approach ......................................................... 6191
Xinkai Chen

Experimentally Verified Depth Regulation for AUVs Using Constrained Model Predictive Control .................................................. 6197
Leo Steenson, Liuping Wang, Alexander Phillips, Stephen Turnock, Mauden Furlong, Eric Rogers

Real-Time 3D Collision Prediction for On-Orbit Servicing Missions ......................................................................................... 6203
Andre Franz, Michael Schmidt, Alexander O. Schwientek, Josef Sommer, Walter Fichter

Some Refinements on Stability Analysis and Stabilization of Second Order T-S Models Using Line-Integral Lyapunov Functions .......................................................................................................................... 6209
Kevin Guelton, Abdelalmadid Cherifi, Laurent Arcese

Consensus of Singular Multi-Agent Systems Based on Networked Predictive Control .................................................. 6215
Xin-Rong Yang, Guoping Liu

A New Clustering Algorithm based on ACO and K-medoids Optimization Methods .................................................... 6221
Li Peng, Guoyong Dong, Feifei Dai, Guoping Liu

Stabilization of Time-Delay Nonlinear Discrete-Time Systems with Saturating Actuators through T-S Models .............................. 6226
Luis Silva, Valter J. L. Leite, Eugenio B. Castelan, Gang Fong

Methodology for Aligning Factory Information and Control Systems in a Complex and Dynamic Environment: Case of Semiconductor Manufacturing .................................................. 6232
Ahmed Ben Amira, Stephane Duazere-Perez, Philippe Vialetelle, Guillaume Lepelleterie, Philippe Lallevee

Population Balance Modeling of Biopolymer Production in Cellular Systems ................................................................................. 6238
Andre Franz, Robert Duer, Achim Kunde

Real-Time Detector for Time-Variant Oscillation with Modified Intrinsic Time-Scale Decomposition ...................................................... 6244
Zizu Guo, Lei Xie, Taihang Ye, Alexander Horch, Chao Song, Jianming Zhang

Combined Approach of Fuzzy Decision Making and Predictive Functional Control to Minimize Variations of Manipulated Variables in Processes with Dead Time .................................................................................. 6250
Tarek Aissa, Christian Arnold, Steven Lambeck

A Distributed Model Predictive Control Scheme for Networks with Communication Failure ........................................................................ 6256
Rainer Manuel Schaich, Matthias A. Muller, Frank Algower

Underwater Glider Navigation Error Compensation Using Sea Current Data ........................................................................... 6262

Observer-Based Bang-Bang Control for a Class of Nonlinear Stochastic Systems ......................................................... 11683

Asma Barbata, Michel Zasadzinski, Harouna Stanley Ali, Hassan Messaoud

Pricing for Coordination in Open-Loop Differential Games ........................................................................................ 11689

Daniel Calderone, Lillian Ratliff, Shunkar Sastry

Squaring-Up Method in the Presence of Transmission Zeros ......................................................................................... 11695

Zheng Qu, Daniel Wiese, Amuradha Annaswamy, Eugene Lavretsky
Balanceability Analysis of GSS Systems with Unit Heterogeneity ............................................................................... 11889
Xingsuan Wang

On Satisfaction of the Persistent Excitation Condition for the Zone MPC: Numerical Approach ................................................................. 11895
Eva Zacekova, Matej Pcoika, Michael Sebek

Solving Systems of Linear Equations by Distributed Convex Optimization in the Presence of Stochastic Uncertainty ................................................................................................................................. 11901
Jing Wang, Nicola Elia

Identification of Uncertain, Spatially Varying Parameters through Multilevel Sampling .................................................................................. 11907
Hans-Werner Van Wyk

A Nonlinear Control Law for Hover to Level Flight for the Quad Tilt-rotor UAV ................................................................................................. 11913
Gerardo R. Flores-Colunga, Rogelio Lozano-Leal

Conditional Gaussian Network as PCA for Fault Detection ....................................................................................................................... 11918
Mohamed Amine Atoui, Sylvain Verron, Abdessalamm Kobi

State Feedback Controller Design for a Class of Linear Switched Systems with Uncontrollable Subsystems .................................................. 11924
Jie Zhang, Xingsuan Wang

Assessment of Model Predictive and Adaptive Glucose Control Strategies for People with Type 1 Diabetes .......................................................... 11930
Dimiter Boiroux, Anne Katriine Duan-Henriksen, Signe Schmidt, Kirsten Norgaard, Niels Kjostad Poulsen, Henrik Madsen, John Bagterp Jørgensen

A Prototype GUI for Unmanned Air Vehicle Mission Planning and Execution .................................................................................................... 11936
Sean Perry, James H. Taylor

Effect of Wheel Slip in the Coordination of Wheeled Mobile Robots ............................................................................................................. 11942
Shyamprasad Kunduri, Edison Orlando Cohen Torres, Prabhakar R. Pagilla

Optimal Multi-Drug Approaches for Reduction of the Latent Pool in HIV ........................................................................................................... 11948
Cesar Augusto Vargas-Garcia, Lamout Camon, Abhyudai Singh, Ryan Zurawkowski

Feedback Control for Linear Switched Systems Consisting of Controllable and Uncontrollable Subsystems with Stochastic Switch Signal and Uncertain Time Delay ................................................................ 11954
Jie Zhang, Xingsuan Wang

An Extremum Seeking Approach to Parameterised Loop-Shaping Control Design .............................................................................................. 11960
Chih Feng Lee, Sai Zhen Khong, Erik Frish, Mathieu Kaysander

On Maximally Stabilizing Traffic Signal Control with Unknown Turn Ratios ............................................................................................... 11966
Ketan Savla, Enrico Luvriari, Giacomo Como

Nonlinear Robust Servo Control for Robotic Citrus Harvesting ....................................................................................................................... 11972
Siddhartha Mehta, William Mackunis, Thomas Burks

Diffusion Based Stopping Criterion for Distributed Optimization .................................................................................................................. 11978
Taylan Aykin, Jun-Ichi Imura

Increasing Isotropy of Intrinsic Compliance in Robot Arms through Biarticulated Structure ............................................................................. 11984
Valerio Salucci, Travis Lee Baraczy, Takafumi Koseki

Optimal DOB Design for Balancing Input/Output Disturbances Response ........................................................................................................ 11990
Bo Sun, Wei Zhang, Weidong Zhang

Real-Time Detection of Glucose Sensor and Insulin Pump Faults in an Artificial Pancreas .................................................................................. 11996
Simone Del Favero, Marco Monaro, Andrea Facchinetti, Alessia Tagliavini, Giovanni Sparacino, Claudio Cobelli

Regeneratively-Constrained LQG Control of Passive Networks ...................................................................................................................... 12002
Eric Warner, Ian Cassady, Jeff Scroggs

Automated Custom Code Generation for Embedded, Real-Time Second Order Cone Programming ................................................................. 12008
Daniel Dutri, Jing Zhang, Behzad Askariane

Global Output-Feedback Extremum Seeking Control for Nonlinear Systems with Arbitrary Relative Degree ...................................................... 12016
Alessandro Jacoub Peixoto, Tiago Sousa Oliveira

Hybrid Model Predictive Control for Grinding Plants ................................................................................................................................. 12022
Fernando Estrada, Aldo Cipriano

Baseline Vibration Attenuation in Helicopters: Robust MIMO-HHC Control ................................................................................................. 12028
Roberto Murra, Marco Lovera

On Experiment Design for Identification of Ill-Conditioned Systems .............................................................................................................. 12034
Kurt-Erik Haggblom

Frequency-Selective Galerkin Models for Turbulent Boundary Layer Drag Reduction ...................................................................................... 12040
Mathias Hakenberg, Dirk Abel

Error Bounds in the Discretisation of the Input-Constrained LQR Problem ................................................................................................. 12046
Jose Adrian De Dona, Claus Mueller, Ryan McCloy

An Implementation of Predictive Functional Control for Image-Based Satellite Attitude Control ................................................................. 12055
Andrzej Zdunek, Gregor Klancar, Gasper Matko, Igo Kejcins

Solution of Affine Quadratic Control Problems ........................................................................................................................................... 12061
Xingsuan Wang

Secure Consensus Against Message Manipulation Attacks in Synchronous Networks ............................................................................................ 12065
Chengcheng Zhao, Jianping He, Peng Cheng, Jining Chen

Rotorcraft System Identification: A Time/Frequency Domain Approach ........................................................................................................ 12071
Marco Bergamasco, Andrea Ragazzi, Marco Lovera

Design of Triple-Level Multiple Models Fuzzy Logic Controller for Adaptive Speed Control with Unknown External Disturbances .................................................................................................................... 12077
Yu Wang

Smart Adaptive Control of a Solar Collector Field ................................................................................................................................. 12083
Esko Kalevi Jusio, Luis Yebra
New Thermo-Optical Plants for Laboratory Experiments

Control of Magnetically Suspended Rotor Combined with Motor Drive System

Robust Fast Fault Detection Observer Design Using Time and Frequency Domain Specifications

Robust Fixed-Order Discrete-Time LPV Controller Design

Guidance Law Design Via Variable Structure Control with Finite Time Sliding Sector

Quasisteady Particle Transport in Slowly Varying Periodic Streaming Flows

Sampled-Parameter Feedback Control of Discrete-Time Linear Stochastic Parameter-Varying Systems

A Comparative Analysis of Traditional and Digital Data Collection Methods in Social Research in LDCs - Case

A Fast Algorithm for Planning Optimal Platoon Speeds on Highway

Design of Power Steering Systems for Heavy-Duty Long-Haul Vehicles

Demands Response Scheme Based on Lottery-Like Rebates

From Linear to Nonlinear Model Predictive Control of a Building

Incentive Based Multi-Objective Optimization in Electric Vehicle Navigation Including Battery Charging

Multi-Objective Control Design for a Truck Cabin

Extended Binary Model Reference Adaptive Control Overcomes Limitations of L1 Adaptive Control

Hill-Climbing for Economic Plantwide Control

Disassembly Line Balancing Problem with Fixed Number of Workstations Under Uncertainty

On the Stability of Generators Load Sharing

Fuzzy Interpretation of Performance Scorecards for Decision-Making in the Industrial Context

A Comparative Analysis of Traditional and Digital Data Collection Methods in Social Research in LDCs - Case

Studies Exploring Implications for Participation, Empowerment, and (mis)Understandings

Intervention AUVs: The Next Challenge

Performance Analysis of Distributed Control Systems Using the FlexRay Protocol
New Trends in Manufacturing: Converging to Service and Intelligent Systems ................................................................. 12301
