2013 Sixth International Conference on Business Intelligence and Financial Engineering

(BIFE 2013)

Hangzhou, China
14-16 November 2013
Preface .......................................................................................................................................................... xviii
Organizing Committee ................................................................................................................................. xx
Technical Program Committee ................................................................................................................... xxi
Reviewers ..................................................................................................................................................... xxvi
BIFE 2013 Workshops ................................................................................................................................... xxviii

Computational Algorithms and Simulation Analysis
The Duplication-Loss Problem: Novel Algorithms Based on k-NNI Local Search ......................................................... 1
   Hui Wang and Daming Zhu
Sonar Image Denoising via Adaptive Overcomplete Dictionary Based on K-SVD Algorithm ........................................ 6
   Di Wu, Yuxin Zhao, Lijuan Chen, and Kuimin Wang
Termination of Two Variable Homogeneous Linear Loops ..................................................................................10
   Yi Li, Chuancan Li, Wenyuan Wu, and Yong Feng
Research on Reefs Extraction Method Based on Multi-spectral Remote Sensing .................................................... 14
   Gang Li and Qingzhong Wang
Analysis of Competitive Pricing on Retailing Channels ....................................................................................... 18
   Peter Cheng, Yelin Fu, and Kin Keung Lai
A Modified Recursive Probabilistic Velocity Obstacles Model for Multi-agent Navigation ........................................ 23
   Wang Li, Yu-Xin Zhao, and Gan-Nan Yuan
The Research of Modeling Method about Underwater Vehicle Penetration Threaten Viewsheds Space ................. 28
   Gang Li and Qingzhong Wang
A Trend Tracking Strategy for Gold Future: An Artificial Neutral Network Analysis .......................................................................................................................................................31
    Chaoteng Jordan Chen, Ying Huang, and Kin Keung Lai
Development of International Standard ENC Validation Check Platform ...................................................36
    Yi Lu, Yun Pang, Jiansheng Yuan, and Yujie Zhang
A Dynamic Programming Algorithm for Unsigned (1,2)-Exemplar Breakpoint Distance Problem with Span Constraint .....................................................................................................39
    Zhexue Wei and Daming Zhu
Detection of Fruit Skin Defects Using Machine Vision System ........................................................................44
    Lu Wang, Anyu Li, and Xin Tian
Using Pyomo and IPOPT for Optimization of Reservoir Flood Control Operation ............................................................................................................................................................................................................49
    Xinyu Wan, Ping’an Zhong, and Wei Ma

Web Computing and Cloud Computing
A Consensus Reaching Model for Collaborative Decision Making in Web 2.0 Communities .......................................................................................................................................................................................................53
    Xiaojie Li, Huili Zhang, Rui Mao, and Xiaoyan Wang
Scheduling Workflow in Cloud Computing Based on Ant Colony Optimization Algorithm ..................................................................................................................................................57
    Yue Zhou and Xinli Huang
The Study of Culture Sharing Project Based on Cloud Computing ........................................................................62
    Shaohui Li and Dingxiang Wang

Neural Network and Support Vector Machines
Complex-Valued GMDH-type Neural Network for Real-Valued Classification Problems .....................................................................................................................................................70
    Jin Xiao, Yi Hu, and Shouyang Wang
Evaluation Model Based on Support Vector Machine for Community Micro-Blog Influence ...........................................................................................................................................................................................75
    Chengshui Liu, Qiang Wang, and Kin Keung Lai
Coupling Firefly Algorithm and Least Squares Support Vector Regression for Crude Oil Price Forecasting ..................................................................................................................................................80
    Xinxie Li, Lean Yu, Ling Tang, and Wei Dai
Forecasting the CPI Using a Hybrid Sarima and Neural Network Model with Web News Articles .............................................................................................................................................................................................84
    Hui Yuan, Dailing Zhang, Wei Xu, Mingming Wang, and Wenda Dong
Data Analysis and Data Mining

Application of Fuzzy Mathematical Model in Summarization of Measurement Questions .................................................................................................................. 89

Hong Liu

An Empirical Study of Cost-Optimal Decisions by Using Cost & Production Line ............................................................................................................................................. 92

Qingmin Yu

Agent-Based Simulation Approach for Managing Communicative Competence in Public Emergence Event ......................................................................................................................................................... 96

Hongqian Wang, Xiaofang Liu, and Kaijian He

Mingrong Wang, Mingxi Wang, Liqiang Shi, and Bin Hu

Giving Full Play to the Statistical Information Function ............................................................................................................................................. 105

Hong Liu and Yunli Ji

Customer Relationship Analysis

A Study on the Switching Pattern and Donors' Loyalty for Charitable Behavior in Hong Kong ............................................................................................................................................. 110

Jennifer Chui Yiu Ng, Kin Keung Lai, and Yan Pui Lee

A Dynamic Transfer Ensemble Model for Customer Churn Prediction ............................................................................................................................................. 115

Jin Xiao, Yuan Wang, and Shouyang Wang

An Empirical Study on Risk Responses for Various Operation Risks of Container Terminals in Hong Kong and China ............................................................................................................................................. 120

Eric Su, Kin Keung Lai, and Yan Pui Lee

Supply Chain Integration and BI

Machine Vision Applications in Agricultural Food Logistics ............................................................................................................................................. 125

Lu Wang, Xin Tian, Anyu Li, and Hanxiao Li

Ocean Carrier’s Free-Time Pricing Scheme for Inbound Container Storage ............................................................................................................................................. 130

Mingzhu Yu and Xin Tian

Application of User-Based Collaborative Filtering Recommendation Technology on Logistics Platform ............................................................................................................................................. 135

Jian Li, Yajie Wang, Jun Wu, and Fengmei Yang
**AI in Business Applications**

Clean Energy Consumption Forecast Based on GA-LSSVR Hybrid Learning Paradigm ................................................................. 139  
*Zishu Wang, Jiarui Shi, Wei Dai, Jiaqian Wu, and Ling Tang*

Analysis of the Marketing Environment and Strategy of China's Small-Displacement Automobiles ................................................ 143  
*Yan Xie*

A Compressed Sensing-Based Denoising Approach in Crude Oil Price Forecasting ................................................................. 147  
*Yang Zhao, Lean Yu, and Kaijian He*

Dynamic Analysis for Beijing Water Resources Management ............................................................. 151  
*Jian Qin and Jisong Wu*

The Construction and Maintenance of the Process Team Work in Executive Organization Reengineering under Internet Environment ........................................ 156  
*Mang He and Yinghui Chen*

**Asset Pricing and Arbitrage Theory**

Pricing and Empirical Analysis of Chinese Defaultable Corporate Bonds ................................................................. 161  
*Xiaoxu Wang and Ping Li*

A Portfolio Optimization Model Based on Information Entropy and Fuzzy Time Series ................................................................. 166  
*Ze-Bin Yang, Rong-Xi Zhou, Qiang Zhang, and Mei Yu*

Discussion on the Problems and Measures in the Formulation of Interdivisional Transfer Price of Colleges and Universities in China ........................................ 171  
*Zhang Xiao Gang*

Human Capital Pricing in Financial Sector - A Case of China's Listed Banks ................................................................. 176  
*Wu Xin, Jin Tian, and Chen Haixia*

A New Model on Intangible Assets Valuation ................................................................. 181  
*Ryan P.C. Chung, Kin Keung Lai, and Yelin Fu*

**Computational Economics and Finance**

Exchange Rate Forecasting Using Multiscale Vector Autoregressive Model ................................................................. 186  
*Kaijian He, Yingchao Zou, and Kin Keung Lai*

Pricing American Parisian Options and ITS Application in the Valuation of Convertible Bonds ................................................................. 191  
*Chunli Chu, Dongmei Guo, and Yi Hu*
Ownership and Indirect Financing of Smes: Estimation Based on Propensity Score Matching .................................................................196

   Xiuzhen Wang, Yi Hu, and Xiaohua Xia

Modeling Exchange Traded Funds Portfolio Using Optimization Model .................................................................201

   Lo Ka Kuen Kenneth, Kin Keung Lai, and Kaijian He

The Impact of TPP and TTIP on the International Trade in China: A Computable General Equilibrium Analysis ..................................................206

   Huimin Bi, Hao Xiao, and Mingzhi Xiao

Multivariate EMD-based Portfolio Value at Risk Estimate for Electricity Markets .................................................................211

   Hongqian Wang, Kaijian He, and Kin Keung Lai

**Corporate Finance**

Price discount of private equity placement and wealth effects comparison between controlling shareholders and institution investors ..................................................216

   Xu Min-Cheng and Wang Susheng

Performance and Risk Management of Real Estate Enterprises .................................................................221

   Xiaoxin Liu, Xin Tian, Di Wu, and Xiuting Li

Model Formulation and Empirical Analyses on the Macro Factors Affecting Credit Spreads of Enterprise Bonds in China .................................................................225

   Di Wang, Rongxi Zhou, Yu Zhan, and Qinghua Zheng

Why Don't Companies Borrow? Evidence from China's Listed Companies .................................................................231

   Xiao Liping and Li Zhe

An Empirical Study of Strategic Performance Appraisal System for Shunde Household Electrical Appliance Industry .................................................................236

   Qingmin Yu

**Financial Risk Management**

   Quanda Zhang and Rongda Chen

Equilibrium Pricing of Real Estate: An Empirically Comparative Study .................................................................245

   Zhang Hong

The Study on Credit Risk's Evaluation - Modern Method and Zhejiang's Cases .................................................................249

   Xu Han and Wu Xin

The Risk Dependence Structure between the Futures and Spot Market – A Mixture Copula Approach .................................................................254

   Jianjun Xu and Fangzhou Yu
Wavelet Based Approach for Exchange Rate Portfolio Value at Risk Estimation ..............................................................................................................................258
   Kaijian He, Yingchao Zou, and Kin Keung Lai

Role of Syndication in Venture Capital Investments in Geographic Distant Projects: Evidence from Chinese Growth Enterprise Market Board .........................263
   Lifeng Tu, Guiming Qiao, and Wei Chen

The Risk Management of Insurance Funds Investing in Public Rental Housing PPP Mode - Taking Shanghai Public Rental Creditor's Projects as an Example .................................................................268
   Daijun Zhang, Qunsi Zou, and Ye Pang

Financial Hedging and Trading
Regression Model for China's Gold Futures Hedging Ratio and Function ..........................................................273
   Tianqi Zhu and Rongda Chen

   Jia Shen and Yucan Liu

Impact of the Introduction of Securities Margin Trade on Stock Abnormal Returns ...........................................................................................................................................281
   Ding Qing and Liu Yucan

Comparisons of Strategies on Gold Algorithmic Trading .........................................................................................286
   Chaoteng Jordan Chen, Xiaotao Liu, and Kin Keung Lai

Financial Mathematics and Financial Economics
The Development of Multi-level Capital Market - Promote the Development of Small and Medium Enterprises ..........................................................................................291
   Juan Wu

Modeling Volatility of Exchange Rate of Chinese Yuan against US Dollar Based on GARCH Models .................................................................295
   Marggie Ma, Jiangze Du, and Kin Keung Lai

Internationalization of the Yen and the Renminbi Internationalization of Development and Prospects for Cooperation .........................................................300
   Liping Xu

</table>
Forecasting CSI 300 Volatility: The Role of Persistence, Asymmetry, and Distributional Assumption in Garch Models .................................................................355
   Congcong Wang and Rongda Chen

Evaluating the Performance of Exchange Traded Funds in the Emerging Markets ..................................................................................................................359
   Lo Ka Kuen Kenneth, Kin Keung Lai, and Kaijian He

Analysis on the Impact of the Fluctuation of the International Gold Prices on the Gold Stocks in Chinese Shanghai and Shenzhen A-Share ...................................................364
   Chen Jie and Chen Rongda

Carbon Emission Abatement: An Introduction ........................................................................369
   Mingxi Wang, Yi Hu, Haibin Xie, and Mingrong Wang

A Real Option Analysis Framework for the Valuation of Internet-Based Companies .........................................................................................................................373
   Eric Lu Cao, Kin Keung Lai, and Yelin Fu

Securities Analyst's Forecasting Ability and ITS Influential Factors: Based on Decision-Making Theory .........................................................................................378
   Jiani Wang

Theoretical Mechanism and Empirical Analysis about the Impact on Insurance Intervene SME Financing .........................................................................................382
   Daijun Zhang, Mengna Hou, and Huiling He

Multilateral Game in Chinese Real Estate Price: A Game Analysis of Real Estate Tax and Land Tightening ................................................................................387
   Jun Yan

**Business Intelligence with Case-Based Computing**

Evaluation Professional Ethics of Network Business ..................................................................392
   Yuntao Jiao, Jun Wang, and Hongyu Guo

Evaluation of Technology Innovation Capability of Equipment Manufacture in Zhejiang Based on Factor Analysis ........................................................................397
   Wen-Ju Chen and Jun-Ling Yu

Intraday Volume-Volatility Dynamics in CSI 300 Futures Market ...........................................401
   Yu Zhen and Wang Susheng

Multi-objective Optimization of Material Collaborative Delivery for Mixed Model Automotive Assembly Process ......................................................................................405
   Zhenxin Cao and Hui Li

xii
Computational Business Science

Gender, Self-Interest, and Altruism: The Evidence and Implication from Experiments .......................................................... 410
   Guodong Wu and Guangxing Wei

Income Distribution of the R&D Alliances under the Supervision of the Third Party: Analysis Based on the Uncertain Condition .......................................................... 414
   Xiang Wang, Guodong Wu, and Weidong Meng

Research on Negotiation Game of Supply-Sale Contract of Agricultural Products Based on Bargaining Model .......................................................... 419
   Ying Dai, Yun Shi, and Han Song

Over-Determinate and Incomplete Contract: Incentive Contract Based on Rabin Motivation Fairness Model .......................................................... 424
   Xiang Wang and Guodong Wu

Holmstrom-Milgrom Model of Principal-Agent Based on Cobb-Douglas Function .......................................................... 429
   Jingwei Liu

Equipment Renewal Scheme Based on the Optimal Comprehensive Method .......................................................... 433
   Xiang Wang, Guodong Wu, and Weidong Meng

Government Performance Evaluation

Energy Consumption and Economic Growth in China's Industrial Sectors .......................................................... 437
   Yi Hu, Dongmei Guo, Mingxi Wang, Ying Deng, and Shouyang Wang

Game Analysis between Governments and Food Corporations in Food Supply Chain with Consumers’ Prosecution .......................................................... 442
   Shuai Fang and Guoxing Zhang

Optimal Design of Enterprise Human Resource Training Program .......................................................... 446
   Lihong He and Jinxin Liu

Modeling Multiple Locations Defence and Attack Dynamic Bayesian Decision Game .......................................................... 449
   Julei Fu, Zhenpeng Li, Duoyong Sun, and Wenli Liu

Public Spending Structural Change of Fujian Province from 1978 to 2006: Based on the Perspective of Government Functions Transformation .......................................................... 454
   Yang Liu

Characteristics of Multi-national Carbon Emissions Based on Empirical Mode Decomposition .......................................................... 458
   Mingxing Liu and Guoxing Zhang
Social Network Construction and Analysis Based on Community Photo Collections with Face Recognition .................................................................463
  Bo Li, Duoyong Sun, Julei Fu, and Zihan Lin

Optimal Allocation of Operating Toll Booths at Highway Toll Station ..................................................468
  Lihong He, Qian Gao, Senbiao Li, and Zhen Peng

The Option Value of Government Guarantee in Highway Based on Utility Indifference Pricing .................................................................472
  Xubu Ma and Xutao Ma

Compensation Equity, Subjective Well-Being and Turnover Intention ........................................................477
  Dongmei Hao, Huanqing Zhu, Yu Zhao, Shujuan Feng, and Xiaolei Yang

China's Economic Development Policies Based on the View of Lowcarbon Economy .................................................................481
  Zhang Hua, Li Guodong, and Zhang Tengfei

Coal Demand Forecast Based on Consumption Structure Partition ........................................................485
  Zhongyu Zhang, Jian Chai, and Qing Zhu

The Analysis of the Market of Coal Consumption in Shaanxi Province Based on the BVAR Model .................................................................490
  Quanying Lu, Zhongyu Zhang, Jian Chai, Qing Zhu, and Jian Chai

A Lagging Dynamic Analysis of Factors Affecting Coal Consumption ........................................................495
  Wen Zheng, Mei Bai, Qing Zhu, and Jian Chai

Thoughts on Leader and Cadre Training in Overseas Oil and Gas Business .............................................500
  Pengcheng Wang

Maoming Retail Business Marketing Environment Analysis .................................................................504
  Chunyuan Ke

The Application of Confucianism in the Construction of Corporate Cultural in CNPC Overseas Operation .................................................................508
  Pengcheng Wang

**Innovation Management and Knowledge Network**

The Storage Formats for Accelerating SMVP on a GPU .................................................................513
  Jin Tian, Fei Wu, Rui Zou, Guohui Zeng, and Li Gong

A Confucian Perspective View on Aesthetics of Architecture - as an Example of the Mous' Manor, Shandong .................................................................517
  Xuejun Lin, Guiwen Li, and Jie Chen

On How Relationship Embeddedness Influences Business Performance .............................................520
  Lin Xin, Jing Zhang, and Kede Qin
The Viscous Mechanism of Transformation and Upgrading of China’s Manufacturing and ITS Path - from the Perspective of the Causes of “Smiling Curve” ............................................................... Yue Qin, Kede Qin, and Changle Xu

Economic Evolution of Spatial Pattern at County Level in Hebei Based on ESDA-GIS ...................................................................................................................... Liang Yang

Design of a Fully Differential GAIN Boosted Operational Amplifier for High Performance ADC .............................................................................................................................................................................................................................................. Rui Zou

The Creation of Knowledge Innovation System .............................................................................................................................................................................................................................................. Jin Tian, Zeng Guohui, Wu Fei, Zou Rui, and Li Gong

Behavior Model of Sigma Delta Modulator for Mobile Digital TV ...................................................................................................................................................................................................................................... Rui Zou and Jin Tian

Financial Optimization and Risk Management

Analysis on the Influential Factors of Pear Exportation in Hebei Province ........................................................................................................................................................................................................................... Yang Nian and Liu Qian

A Three-Layer Network Model for Reviewer Recommendation ................................................................................................................................................................................................................................................................... Yunhong Xu and Yuanwei Du

A Data-Distribution-Based Imbalanced Data Classification Method for Credit Scoring Using Neural Networks .................................................................................................................................................................................................................................................................. Dailing Zhang and Wei Xu

How Web News Media Impact Futures Market Price Linkage? ........................................................................................................................................................................................................................................................................ Nana Lin, Jingwen Yuan, Wei Xu, Li Wei, and Xiaoning Wang

Prediction-Based Portfolio Selection Model Using Support Vector Machines .................................................................................................................................................................................................................................................................. Cuiyan Hao, Jiaqian Wang, Wei Xu, and Yuan Xiao

Low Carbon Economy Evaluation Index System and Development Evaluation of Hebei .................................................................................................................................................................................................................................................................. Wang Wei-Yu and Yang Nian
Managerial and Engineering Optimization

The Impact on Inventory Control Policy with Retailer When Considering Carbon Emission System

Feng Tao

A Study on Revenue Management of a Service Industry

May K.L. Lee, Yelin Fu, and Kin Keung Lai

Simulation and Optimization of Decision-Making of Organizations’ Safety Investment

Hao Ding, Yuming Zhu, and Xiaofeng Xu

Optimization of the Routes to Realize Non-Fossil Fuel Development Goal in China Based on Linear Dynamic Programming Model in Multi-constraints

Jia Liu and Xuying Qin

Fuzzy Optimization

The Relationship between Convergence in Mean Square and Other Convergence of Fuzzy Sequences

Cuilian You and Weiqing Wang

Some Properties of Multi-dimensional Liu Process

Cuilian You and Huae Huo

On the Conditional Expected Value for Fuzzy Variables

Cuilian You

Linear and Nonlinear Programming

An SQP Algorithm with Flexible Penalty Functions

Bo Wang and Dingguo Pu

A Smoothing QP-free Infeasible Method without a Penalty Function and a Filter

Ailan Liu and Dingguo Pu

A Filter-SSLE Algorithm for Solving Nonlinear Complementarity Problems

Ke Su and Hui An

The Convergence of Broyden Algorithms without Convexity

Dingguo Pu and Ailan Liu

Global Convergence of an Improved Filter Method of Feasible Direction for Inequality Optimization

Ning Xu and Yingna Yuan

A New Smoothing Inexact Newton Method for Generalized Nonlinear Complementarity Problem

Ke Su and Xiaoli Lu
A Sequential Quadratic Programming Method for Nonlinear Programming
without a Penalty or a Filter .................................................................638
  Mingxia Huang and Dingguo Pu

A Bi-objective Mathematical Model for Hazmat Vehicle Routing Problem
with Path-Based Risk Estimation ..........................................................643
  Tengfei Xu, Fengmei Yang, Jian Li, and Wenyuan Yuan

A Class of New Lagrangian Multiplier Methods ........................................647
  Dingguo Pu and Pei Yang

Author Index .........................................................................................652
