### Session IV-A: Test Generation I

Model-Based Testing of Obligations .............................................................................................................1  
   *Iram Rubab, Shaukat Ali, Lionel Briand, and Yves Le Traon*

An Improved Memetic Algorithm with Method Dependence Relations (MAMDR) .................................................11  
   *Ali Aburas and Alex Groce*

General Optimization Strategies for Refining the In-Parameter-Order Algorithm ........................................21  
   *Shiwei Gao, Jianghua Lv, Binglei Du, Yaruo Jiang, and Shilong Ma*

### Session IV-B: System Development

Improving the Quality of AspectJ Application: Translating Name-Based Pointcuts to Analysis-Based Pointcuts .................................................................................................................27  
   *Lin Wang, Tomoyuki Aotani, and Masato Suzuki*

Exploring Model-Based Repositories for a Broad Range of Industrial Applications and Challenges ..................37  
   *Tao Yue, Shaukat Ali, Arnaud Descour, Qitao Gan, Marius Liaaen,  
   Geir Magne Merkesvik, Boas Krøgh Nielsen, Jan Nygård, Bjørn Ove Olafsen,  
   and Anne Lise Waal*

Early Identification of Future Committers in Open Source Software Projects .............................................47  
   *Yasutaka Kamei, Masao Ohira, Ahmed E. Hassan, Naoyasu Ubayashi,  
   and Ken-ichi Matsumoto*
Session V-A: Test Generation II

The Impact of Equivalent, Redundant and Quasi Mutants on Database Schema Mutation Analysis .................................................................57
  Chris J. Wright, Gregory M. Kapfhammer, and Phil McMinn

Automating Test-Suite Augmentation ..........................................................................................................................67
  Roderick Bloem, Robert Koenighofer, Franz Röck, and Michael Tautschnig

Bottom-up Integration Testing with the Technique of Metamorphic Testing ...............................................................73
  Xiaoyuan Xie, Jingxuan Tu, Tsong Yueh Chen, and Baowen Xu

Parameter Tuning for Search-Based Test-Data Generation Revisited: Support for Previous Results ....................................................79
  Anton Kotelyanskii and Gregory M. Kapfhammer

Session V-B: Security and Run-Time

Optimizing Multi-objective Evolutionary Algorithms to Enable Quality-Aware Software Provisioning .........................................................85
  Donia El Kateb, François Fouquet, Johann Bourcier, and Yves Le Traon

A Method to Evaluate CFG Comparison Algorithms ..............................................................................................................95
  Patrick P.F. Chan and Christian Collberg

Identifying Data Inconsistencies Using After-State Database Testing (ASDT) Framework .................................................................105
  Robert Setiadi and Man Fai Lau

A Hybrid Monitoring of Software Design-Level Security Specifications ..........................................................................................111
  Muhammad Umair Khan and Mohammad Zulkernine

Session VII-A: Test Generation III

Integration of Requirements Engineering and Test-Case Generation via OSLC .................................................................117
  Bernhard K. Aichernig, Klaus Hörmaier, Florian Lorber, Dejan Ničković; Rupert Schlick, Didier Simoneau, and Stefan Tiran

An Empirical Study on the Usage of Mocking Frameworks in Software Testing .................................................................127
  Shaikh Mostafa and Xiaoyin Wang

Black-Box Test Data Generation for GUI Testing ......................................................................................................................133
  Mohammad Ali Darvish Darab and Carl K. Chang

Automated Test Oracle Generation via Denotational Semantics .................................................................................................139
  Hai-Feng Guo, Liang Cao, Yushu Song, and Zongyan Qiu
Session VII-B: QUAMES Workshop
Cost Estimation for Model-Driven Interoperability: A Canonical Data Modeling Approach ................................................................. 145
Peter Mork, Walt Melo, Sylvia Dutcher, Chris Curtis, and Melissa Scroggs
LTF: A Model-Based Load Testing Framework for Web Applications ............................................................... 154
Junzhan Zhou, Bo Zhou, and Shanping Li
Using Measures for Verifying and Improving Requirement Models in MDD Processes .................................... 164
Giovanni Giachetti, Beatriz Marín, and Xavier Franch

Session VIII-A: System Architecture and Correctness
A Comparative Study of Invariants Generated by Daikon and User-Defined Design Contracts .............................................................. 174
Farhana Rahman and Yvan Labiche
Detecting Inter-Component Configuration Errors in Proactive: A Relation-Aware Method ................................................................. 184
Wei Chen, Xiaoliang Qiao, Jun Wei, Hua Zhong, and Xiang Huang
Bounded Model Checking of Hybrid Automata Pushdown System ............................................................... 190
Yu Zhang, Yunwei Dong, and Fei Xie
Analyzing Behavioral Aspects of UML Design Class Models against Temporal Properties .............................................................. 196
Mustafa Al-Lail, Wuliang Sun, and Robert B. France

Session VIII-B: Software Faults and Bugs
Toward Extended Change Types for Analyzing Software Faults .................................................................................. 202
Billy Kidwell, Jane Huffman Hayes, and Allen P. Nikora
The Effect of Method Origin on Method Invocation Fault Frequency ........................................................................ 212
Shimul Kumar Nath, Robert Merkel, and Man Fai Lau
A General Imperfect Software Debugging Model Considering the Nonlinear Process of Fault Introduction ........................................ 222
Jinyong Wang, Zhibo Wu, Yanjun Shu, and Zhan Zhang
W-VST: A Testbed for Evaluating Web Vulnerability Scanner .................................................................................. 228
Yuan-Hsin Tung, Shian-Shyong Tseng, Jen-Feng Shih, and Hwai-Ling Shan

Session IX-A: Usability
Assessing the Modeling of Aspect State Machines for Testing from the Perspective of Modelers ......................................................... 234
Shaukat Ali, Tao Yue, and Iram Rubab
In-process Usability Problem Classification, Analysis and Improvement ................................................................. 240
   Ruili Geng, Mingrui Chen, and Jeff Tian

Session IX-B: Test Generation IV
Anti-pattern Mutations and Fault-proneness ........................................................................................................... 246
   Fehmi Jaafar, Foutse Khomh, Yann-Gaël Guéhéneuc, and Mohammad Zulkernine
Empirically Evaluating the Quality of Automatically Generated and Manually Written Test Suites ................................................................. 256
   Jeshua S. Kracht, Jacob Z. Petrovic, and Kristen R. Walcott-Justice
On a New Detecting Technique for Conjunctive Literal Insertion Fault in Boolean Expressions ................................................................. 266
   Tanay Kanti Paul, Man Fai Lau, and Sebastian Ng

Session IX-C: Comprehension and Analysis I
Quantifying Program Comprehension with Interaction Data ....................................................................................... 276
   Roberto Minelli, Andrea Mocci, Michele Lanza, and Takashi Kobayashi
Quantitatively Exploring Non-code Software Artifacts ............................................................................................. 286
   Luca Bigliardi, Michele Lanza, Alberto Bacchelli, Marco D’Ambros, and Andrea Mocci
A Method to Test the Information Quality of Technical Documentation on Websites ......................................................... 296
   Oleksandr Shpak, Welf Löwe, Anna Wingkvist, and Morgan Ericsson

Session X-A: Metrics
A Benchmarking-Based Model for Technical Debt Calculation .................................................................................. 305
   Alois Mayr, Reinhold Plösch, and Christian Körner
Uniformly Evaluating and Comparing Ranking Metrics for Spectral Fault Localization ................................................... 315
   Chunyan Ma, Yifei Zhang, Tao Zhang, Yuwei Lu, and Qingyi Wang
Measuring Class Cohesion Based on Iterative Process Using External Class Relationships ......................................................... 321
   Jun-Ha Lee and Dae-Kyoo Kim
Estimation of Uncertainty in Application Profiles ........................................................................................................ 327
   David Flater

Session X-B: Comprehension and Analysis II
The Value of Software Documentation Quality ............................................................................................................. 333
   Reinhold Plösch, Andreas Dautovic, and Matthias Saft
Understanding and Classifying the Quality of Technical Forum Questions ...................................................................... 343
   Luca Ponzanelli, Andrea Mocci, Alberto Bacchelli, and Michele Lanza
Exploring the Relationships between the Understandability of Architectural Components and Graph-Based Component Level Metrics
Srdjan Stevanetic and Uwe Zdun

Empirical Study on the Effect of a Software Architecture Representation’s Abstraction Level on the Architecture-Level Software Understanding
Srdjan Stevanetic and Uwe Zdun
