Applications of Mathematics in Engineering and Economics (AMEE’14)

Sozopol, Bulgaria
8–13 June 2014

Editors
George Venkov
Vesela Pasheva
Technical University of Sofia, Sofia, Bulgaria

Sponsoring Organization
Research and Development Sector of the Technical University of Sofia

All papers have been peer reviewed.
Preface: Applications of Mathematics in Engineering and Economics (AMEE’14)
George Venkov and Vesela Pasheva 1

Organizing Committees 2

MATHEMATICAL MODELING

Optimal individual diet
Cvetana Nedeva and Silvia Baeva 3

Mathematical model of the cylinder rotations in a viscous medium
Dmitry Zavalishchin 11

Evaluation of payment flows based on Markov chain model with incomplete information
Galina Timofeeva and Nikolay Timofeev 17

An experimental study and analysis of a new railway transport noise absorber
Ivan Kralov, Ana Piskova, and Krasimir Nedelchev 23

Laguerre polynomial approximation and model order reduction for linear systems
Kamen Perev 29

Mathematical model of testing of pipeline integrity by thermal fields
Nataliia Vaganova 37

On transient departure process in a finite-buffer queueing model with probabilistic packet dropping
Wojciech M. Kempa 42
Crack interaction in magnetoelectroelastic materials
Yonko Stoynov

Modeling data for tilted implants in grafted with bio-oss maxillary sinuses using logistic regression
R. Shindjalova, K. Prodanova, and V. Svechtarov

Statistical analysis of content of Cs-137 in soils in Bansko-Razlog region
R. G. Kobilarov

Plain apportionments: History, paradoxes, generalizations, new methods
M. M. Konstantinov, G. B. Pelova, and K. D. Yanev

NUMERICAL METHODS
High-quality light field interpolation in epipolar plane image domain by DCT-based shearing
Leonid Bilevich, Suren Vagharshakyan, and Atanas Gotchev

Application problems for computing areas of figures by the alternative method
Daniela Bímová and Daniela Bittnerová

A priori error estimates of the discontinuous Galerkin method for the MEW equation
J. Hozman

Implementing the finite element analysis with service-oriented architectures and workflows
Nikolay Mladenov

Shape optimization of the current body located in the cooling canal
Petr Salač and Václav Dvořák

A note on wavelet methods for singularly perturbed problems
Dana Černá and Václav Finěk

Numerical methods for advection equations with delay
V. Pimenov and S. Sviridov

Mathematical modeling of the incompressible fluid flows
Valentin A. Gushchin and Pavel V. Matyushin
Discrete Laplace-Beltrami operators for cortical bioelectric source imaging
Ivats Dakov and Georgi Venkov

Data approximation using a blending type spline construction
Rune Dalmo and Jostein Bratlie

Motion capture data represented using a blending type spline construction
Jostein Bratlie and Rune Dalmo

Numerical method for determination of resonance electron velocities in periodic electric fields
Khrisito Tarnev

Fast explicit positivity-preserving schemes for the Black-Scholes equation
Mariyan Milev, Aldo Tagliani, and Dessislava Koleva

DIFFERENTIAL EQUATIONS AND APPLICATIONS
Riemann-Hadamard function for Darboux-Goursat problem and its multidimensional application
Aleksey Nikolov and Nedyu Popivanov

Minimizing of weighted functional on trajectories of a linear system with delay integrally bounded impulse control
M. A. Koreshnikova and A. N. Sesekin

Minimax approach problem with incomplete information for the two-level hierarchical discrete-time dynamical system
A. F. Shorikov

On the possibility of the Cahn-Hilliard approach extension to the solution of gas dynamics problems (inner turbulence)
E. A. Lukashev, N. N. Yakovlev, E. V. Radkevich, and V. V. Palin

One method of attraction to the solvability set in the convergence problem
V. N. Ushakov, A. V. Ushakov, and G. V. Parshikov

Application of method of special series for solution of nonlinear partial differential equations
Mikhail Filimonov
