Welcome Message from the Program Committee Chairs.................................................................vii
Committees......................................................................................................................................viii

Invited Talk 1
Data Automata in Scala ..................................................................................................................1
Klaus Havelund

Session 1: Verification 1
Trace-Based Temporal Verification for Message-Passing Programs ........................................10
Jinjiang Lei, Zongyan Qiu, and Zhong Shao
Spotlight Abstraction with Shade Clustering—Automatic Verification of Parameterised
Systems ................................................................................................................................................18
Nils Timm
Verifying Preemptive Kernel Code with Preemption Control Support .........................................26
Yu Guo and Haozhong Zhang

Session 2: Formal Modelling
A Three-Dimensional Model for Software Security Evaluation ..................................................34
Zhuobing Han, Xiaohong Li, Ruitao Feng, Jing Hu, Guangquan Xu, and Zhiyong Feng
Contemplating the Addition of Stochastic Behaviour to Hybrid Event-B .......................................42
Richard Banach
Modeling Social Networking Privacy ..............................................................................................50
Carolina Dania and Manuel Clavel

Session 3: Testing
Fault Localization with Partially Reliable Test Results Using Dempster-Shafer Theory ................58
Xinrui Guo, Xiaoyu Song, William N.N. Hung, Ming Gu, and Jiaguang Sun
Alleviating the Impact of Coincidental Correctness on the Effectiveness of SFL
by Clustering Test Cases ..............................................................................................................66
   Li Weishi and Xiaoguang Mao

Choreography Scenario-Based Test Data Generation ........................................................................70
   Kai Ma, Jin Wang, Hongli Yang, Jun Yan, Jian Zhang, and Shengchao Qin

Invited Talk 2

Session 4: Verification 2
Formal Verification of Interrupt Injection in a Hypervisor ...............................................................74
   Haozhong Zhang and Yu Guo
Combining Syntactic and Semantic Encoding for LTL Bounded Model Checking ...............................82
   Wanwei Liu, Xiaoguang Mao, Geguang Pu, and Rui Wang
Modeling and Verifying the TTCAN Protocol Using Timed CSP .....................................................90
   Qinwen Ran, Xi Wu, Xin Li, Jianqi Shi, Jian Guo, and Huibiao Zhu

Session 5: Program Analysis
Parametrizing Program Analysis ....................................................................................................98
   Lunjin Lu
Behaviour Inference for Deadlock Checking .....................................................................................106
   Ka I. Pun, Martin Steffen, and Volker Stolz
Branch Obfuscation Using “Black Boxes” ........................................................................................114
   Nan Zong and Chunfu Jia

Session 6: System Modelling
An Approach to Modelling and Evaluating AGG Based Reliable Software Systems ........................122
   Chen Li, Linpeng Huang, Luxi Chen, and Xiwen Wu
Degree of Schedulability of Mixed-Criticality Real-Time Systems with Probabilistic
Sporadic Tasks ....................................................................................................................................126
   A. Jalil Boudjadar, Alexandre David, Jin Hyun Kim, Kim G. Larsen, Marius Mikučionis,
   Ulrik Nyman, and Arne Skou
Application-Specific Architecture Selection for Embedded Systems via Schedulability
Analysis ..............................................................................................................................................131
   Han Liu, Hehua Zhang, Yu Jiang, Xiaoyu Song, Ming Gu, and Jiaguang Sun
Energy-Efficient Task Scheduling and Task Energy Consumption Analysis
for Real-Time Embedded Systems ..................................................................................................135
   Yongqi Ge, Yunwei Dong, and Hongbing Zhao
Invited Talk 3
On Statistical Model Checking with PLASMA

Axel Legay and Sean Sedwards

Session 7: System Design
Mixed Simulation of Multi-valued Models

Ou Wei and Juanjuan Chen

An Improved Recursive Algorithm for Parity Games

Yao Liu, Zhenhua Duan, and Cong Tian

Towards a Stochastic Occurrence-Based Modeling Approach for Stochastic CPSs

Bei Cheng and Dehui Du

Session 8: Service and Cloud
Bayesian Model-Based Prediction of Service Level Agreement Violations for Cloud Services

Bing Tang and Mingdong Tang

Configuration of Services Based on Virtualization

Jian-min Jiang, HuiBiao Zhu, Qin Li, Shi Zhang, Ping Gong, and Zhong Hong

Data Resources in Dynamic Environments

Wen Zeng and Maciej Koutny

Session 9: System Analysis
iDola: Bridge Modeling to Verification and Implementation of Interrupt-Driven Systems

Han Liu, Hehua Zhang, Yu Jiang, Xiaoyu Song, Ming Gu, and Jiaguang Sun

Timed Automata Semantics of Spatial-Temporal Consistency Language STeC

Yuanrui Zhang, Frederic Mallet, and Yixiang Chen

A Formal Development Approach for Self-Organising Systems

Qin Li and Graeme Smith

TASE 2013 Paper
Normal Bisimulation for Higher Order Pi-Calculus with Unguarded Choice

Zining Cao
