2014 IEEE 20th Pacific Rim International Symposium on Dependable Computing

(PRDC 2014)

Singapore
18 – 21 November 2014
2014 IEEE 20th Pacific Rim International Symposium on Dependable Computing
PRDC 2014

Table of Contents

Preface ........................................................................................................................................................viii
Organizing Committee ................................................................................................................................ix
Reviewers and Subreviewers .....................................................................................................................x
Keynotes ......................................................................................................................................................xi

Session 1: Fault Tolerant
A Fault Tolerant Architecture for Data Fusion Targeting Hardware and Software Faults .................................1
   Bader Kaci, Lussier Benjamin, and Schön Walter
Design of Multi-threaded Fault-Tolerant Connection-Oriented Communication ...........................................11
   Naghmeh Ivaki, Filipe Araújo, and Fernando Barros
A Software-Implemented Fault-Tolerance Approach for Control and Display Systems in Avionics .................................21
   C. Fayollas, J.C. Fabre, P. Palanque, M. Cronel, D. Navarre, and Y. Deleris
Study on Routing Protocol for Structured P2P Network Taking Account of the Nodes Which Behave Like a Byzantine Fault ...........................................................................................................31
   Satoshi Fukumoto, Tomoki Endo, Mamoru Ohara, and Masayuki Arai

Parallel Session 2A: Security Systems
Automatic Generation of Security Argument Graphs ...................................................................................33
   Nils Ole Tippenhauer, William G. Temple, An Hoa Vu, Binbin Chen,
   David M. Nicol, Zbigniew Kalbarczyk, and William H. Sanders
Towards Secure and Dependable Authentication and Authorization Infrastructures ........................................43
   Diego Kreutz, Alysson Bessani, Eduardo Feitosa, and Hugo Cunha
Lightweight Bare-Metal Stateful Firewall .................................................................................................53
   Yihuan Xing, Ford Long Wong, and Akash Kumar
Parallel Session 2B: Hardware

Reduction of NBTI-Induced Degradation on Ring Oscillators in FPGA ..............................................................59
Yasuo Sato, Masafumi Monden, Yousuke Miyake, and Seiji Kajihara

Protecting RAID Arrays against Unexpectedly High Disk Failure Rates .................................................................68

EA-E0: Endurance Aware Erasure Code for SSD-Based Storage Systems ............................................................76
Saeideh Alinezhad Chamazcoti and Seyed Ghassem Miremadi

Parallel Session 3A: Algorithm

A Practical Approach for Generating Failure Data for Assessing and Comparing Failure Prediction Algorithms .................................................................86
Ivano Irrera and Marco Vieira

Algorithm Selection for Error Resilience in Scientific Computing .................................................................................96
Joseph Callenes-Sloan and Hugh McNamara

Exploiting Synchronicity for Immediate Feedback in Self-Stabilizing PIF Algorithms ..................................................106
Oday Jubran and Oliver Theel

Coarse-Grained Parallel Uniformization for Continuous-Time Markov Chains .........................................................116
Hiroyuki Okamura, Yusuke Kunimoto, and Tadashi Dohi

Parallel Session 3B: Safety and Correctness

From Safety Analyses to Experimental Validation of Automotive Embedded Systems .........................................................125
Ludovic Pintard, Jean-Charles Fabre, Michel Leeman, Karama Kanoun, and Matthieu Roy

The Nature and Content of Safety Contracts: Challenges and Suggestions for a Way Forward ...........................................135
Patrick Graydon and Iain Bate

FoxyFeed: Forging Device-Level Asynchronous Events for Kernel Development ..........................................................145
Kenji Kono, Shunsuke Miyahara, Hiroshi Yamada, and Takeshi Yoshimura

Locating a Faulty Interaction in Pair-wise Testing ........................................................................................................155
Takahiro Nagamoto, Hideharu Kojima, Hiroyuki Nakagawa, and Tatsushiro Tsuchiya

Simulation of Software Fault Detection and Correction Processes Considering Different Skill Levels of Debuggers ..........................................................157
Rui Peng and F.R. Shahrzad
Codes Correcting Asymmetric/Unidirectional Errors along with Bidirectional Errors of Small Magnitude ..........................................................................................................................159
Shohei Kotaki and Masato Kitakami

Session 4: Cloud
Computing Defects per Million in Cloud Caused by Virtual Machine Failures with Replication ......................................................................................................................161
Subrota K. Mondal, Jogesh K. Muppala, Fumio Machida, and Kishor S. Trivedi
Reliability of Geo-replicated Cloud Storage Systems .................................................................169
Ilias Iliadis, Dmitry Sotnikov, Paula Ta-Shma, and Vinodh Venkatesan
CloudBFT: Elastic Byzantine Fault Tolerance ..................................................................................180
Rodrigo Nogueira, Filipe Araujo, and Raul Barbosa
Formalizing Google File System ...................................................................................................190
Mengdi Wang, Bo Li, Yongxin Zhao, and Geguang Pu

Session 5: Software Quality
Efficient VM Introspection in KVM and Performance Comparison with Xen ...............................................192
Kenichi Kourai and Kousuke Nakamura
Region-Adherent Algorithms: Restricting the Impact of Faults on Service Quality .............................................203
Jan Steffen Becker, Dilshod Rahmatov, and Oliver Theel
Optimal Reliability Design for Real-Time Systems with Dynamic Voltage and Frequency Scaling ..........................................................213
Toshitaka Koga, Tadashi Dohi, and Hiroyuki Okamura
Optimization of Partitioned Architectures to Support Soft Real-Time Applications ......................223
Domitian Tamas-Selicean and Paul Pop

Session 6: Distributed Systems
Reliable Shortest Paths in Wireless Sensor Networks: Refocusing on Link Failure Scenarios from Applications ..................................................................................................................225
Md Zakirul Alam Bhuiyan and Guojun Wang
Responsiveness of Service Discovery in Wireless Mesh Networks .........................................................234
Andreas Dittrich, Daniel Solis Herrera, Pablo Coto, and Miroslaw Malek
Reasoning about Group-Based Mobility in MANETs .............................................................................244
Xi Wu, Si Liu, Huibiao Zhu, and Yongxin Zhao

Author Index ........................................................................................................................................254
