2015 IEEE 16th International Symposium on High Assurance Systems Engineering

(HASE 2015)

Daytona Beach, Florida, USA
8-10 January 2015
## Full Papers

An Object-Oriented Language for Modeling of Hybrid Systems ..........................1  
*Huixing Fang, Huibiao Zhu, and Jianqi Shi*

Effect of User Posture and Device Size on the Performance of Touch-Based  
Authentication Systems .................................................................10  
*Zahid Syed, Jordan Helmick, Sean Banerjee, and Bojan Cukic*

Modeling and Verifying the Ballooning in Xen with CSP .................................18  
*Luyao Wang, Fengwei Sui, Yanhong Huang, and Huibiao Zhu*

Verilog Synthesis in the Higher-Order Transformation Framework of TL ...........26  
*Victor Winter and Shiraz Hussain*

Model-Checking and Game theory for Synthesis of Safety Rules .........................36  
*Mathilde Machin, Fanny Dufossé, Jérémy Guiocchet, David Powell, Matthieu Roy,  
and Hélène Waeslynck*

A Fixed-Point Algorithm for Automated Static Detection of Infinite Loops ........44  
*Andreas Ibing and Alexandra Mai*

Formal Foundations for Hierarchical Safety Cases ..........................................52  
*Ewen Denney, Ganesh Pai, and Iain Whiteside*

Enabling Decision Support for the Delivery of Real-Time Services ....................60  
*David McKee, David Webster, and Jie Xu*

Adaptive GC-Aware Load Balancing Strategy for High-Assurance Java Distributed  
Systems .......................................................................................68  
*A. Omar Portillo-Dominguez, Miao Wang, John Murphy, and Damien Magoni*
Verification for OAuth Using ASLan++ .................................................................76
   Haixing Yan, Huixing Fang, Christian Kuka, and Huibiao Zhu

Extending Contract theory with Safety Integrity Levels ........................................85
   Jonas Westman and Mattias Nyberg

A Methodology to Efficiently Compare Operating System Stability ........................93
   Erik Van Der Kouvve, Cristiano Giuffrida, Razvan Ghituletez, and Andrew S. Tanenbaum

A Game-Theoretical Model for Security Risk Management of Interdependent ICT
and Electrical Infrastructures ...........................................................................101
   Ziad Ismail, Jean Leneutre, David Bateman, and Lin Chen

Weaving an Assurance Case from Design: A Model-Based Approach ....................110
   Richard Hawkins, Ibrahim Habli, Dimitris Kolovos, Richard Paige, and Tim Kelly

A Proxy Identifier Based on Patterns in Traffic Flows ........................................118
   Vahid Aghaei-Foroushani and A. Nur Zincir-Heywood

Deriving Safety Contracts to Support Architecture Design of Safety Critical Systems .............................................126
   Irfan Sljivo, Omar Jaradat, Iain Bate, and Patrick Graydon

Strategy-Aware Mitigation Using Markov Games for Dynamic Application-Layer
Attacks ........................................................................................................134
   Mahsa Emami-Taba, Mehdi Amoui, and Ladan Tahvildari

Adaptive Failure Prediction for Computer Systems: A Framework and a Case Study ...........................................142
   Ivano Irrera, Marco Vieira, and Joao Duras

Introducing Meta-Requirements for Describing System of Systems ........................150
   Andrea Ceccarelli, Marco Mori, Paolo Lollini, and Andrea Bondavalli

Observation-Level-Driven Formal Modeling .........................................................158
   Atif Mashkoor and Jean-Pierre Jacquot

Ontology of Secure Service Level Agreement .................................................166
   Chen-Yu Lee, Krishna M. Kavi, Raymond A. Paul, and Mahadevan Gomathisankaran

Modeling and Verification for Probabilistic Properties in Software Product Lines ........173

MPISE: Symbolic Execution of MPI Programs .............................................181
   Xianjin Fu, Zhenbang Chen, Yufeng Zhang, Chun Huang, Wei Dong, and Ji Wang

Executable Models to Support Automated Software FMEA ...................................189
   Valentina Bonfiglio, Leonardo Montecchi, Francesco Rossi, Paolo Lollini, András Pataricza, and Andrea Bondavalli

Formalization and Verification of REST Architecture in Viewpoints ....................197
   Yiting Tang, Xi Wu, Huibiao Zhu, and Jian Guo

Modeling and Verifying Google File System .......................................................207
   Bo Li, Mengdi Wang, Yongxin Zhao, Gegenang Pu, Huibiao Zhu, and Fu Song
A Diversity-Based Approach for Communication Integrity in Critical Embedded Systems .......................................................... 215
  Amira Zammal, Agnan de Bonneval, and Yves Crouzet

A Calculus for Wireless Sensor Networks from Quality Perspective .................................................................................. 223
  Xi Wu and Huibiao Zhu

CamAuth: Securing Web Authentication with Camera ........................................................................................................... 232
  Mengjun Xie, Yanyan Li, Kenji Yoshigoe, Remzi Seker, and Jiang Bian

There is a Will, There is a Way: A New Mechanism for Traffic Control Based on VTL and VANET ................................................................................. 240
  Jingmin Shi, Chao Peng, Qin Zhu, Pengfei Duan, Yu Bao, and Mengjun Xie

A Method for Validating Intent Model Behavior in DSVMs .................................................................................................. 247
  Karl A. Morris, Peter J. Clarke, Xudong He, Fabio M. Costa, and Mark Allison

Applying Safety Case Pattern to Generate Assurance Cases for Safety-Critical Systems .................................................. 255
  Chung-Ling Lin and Wuwei Shen

Eclipse vs. Mozilla: A Comparison of Two Large-Scale Open Source Problem Report Repositories .............................................................................. 263
  Sean Banerjee, Jordan Helmick, Zahid Syed, and Bojan Cukic

**Short Papers**

HCPN Modeling for ERTMS Requirements Specification ........................................................................................................ 271
  Zakaryae Boudi, El Miloudi El Koursi, and Simon Collart-Dutilleul

The Need for a Confidence View of CPS Support Environments (Fast Abstract) ......................................................................... 273
  Fredrik Asplund, Martin Törngren, Richard Hawkins, and John A. McDermid

Signal Processing Oriented Approach for Big Data Privacy .................................................................................................. 275
  Xiaohua Li and Thomas Yang

Fidelity and Complexity in Passive Radar Simulations ............................................................................................................. 277
  William C. Barott, Ted Dabrowski, and Braham Himed

Using Pairwise Testing to Verify Automatically-Generated Formal Specifications ........................................................................... 279
  Salamah Salamah, Omar Ochoa, and Yadira Jacquez

**Author Index** ............................................................................................................................... 281
