2014 Second International Symposium on Computing and Networking

(CANDAR 2014)

Shizuoka, Japan
10-12 December 2014
2014 Second International Symposium on Computing and Networking
CANDAR 2014
Table of Contents

Message from Organizers.................................................................xv
Conference Organization...........................................................................xvi
Program Committees...........................................................................xviii
Reviewers........................................................................................xxiii

Keynote

ARM Based Platform SoC for Embedded Applications ........................................1
Fumihiko Hayakawa and Atsuhiro Suga

Nerve Net: A Regional-Area Network for Resilient Local Information Sharing and Communications .................................................................3
Masugi Inoue, Yasunori Owada, Kiyoshi Hamaguti, and Ryu Miura

On Capacity Studies for Mobile Ad Hoc Networks ........................................7
Xiaohong Jiang

A Weakly Universal Cellular Automaton on the Heptagrid with Three States .................................................................11
Maurice Margenstern

Creating Safe and Sound Cities by Connected Cars ......................................19
Takayuki Morikawa

Recent Topics on Practical Functional Encryption ......................................21
Katsuyuki Takashima

Computational Models for Big Data Processing ...........................................28
Koichi Wada
CANDAR 2014: Long Papers

Fault-Tolerant Routing Algorithms for Hierarchical Dual-Nets with Limited and Arbitrary Number of Faulty Nodes .......................................................... Jun Arai and Yamin Li

On Hypercube Routing and Fault Tolerance with Bit Constraint ........................................... Antoine Bossard and Keiichi Kaneko

Understanding the Power of Stigmergy of Anonymous Agents in Discrete Environments ........................................................................................................ Gianlorenzo D’Angelo, Xavier Défago, and Nicolas Nisse

On Guha and Khuller's Greedy Algorithm for Finding a Minimum CDS for Unit Disk Graphs ............................................. Satoshi Fujita

On Vertex Cover with Fractional Fan-Out Bound ........................................................................ Satoshi Fujita

Putting the Pieces Together: The Construction of a Reliable Virtualizing Object-Based Storage Stack .................................................. David C. van Moolenbroek, Raja Appuswamy, and Andrew S. Tanenbaum

A Time Optimal Parallel Algorithm for the Dynamic Programming on the Hierarchical Memory Machine ............................................ Koji Nakano

Software Model Checking of UDP-based Distributed Applications ................................................ Nazim Sebih, Franz Weitl, Cyrille Artho, Masami Hagiya, Yoshinori Tanabe, and Mitsuharu Yamamoto

Unified Performance Profiling of an Entire Virtualized Environment ........................................ Masao Yamamoto, Miyuki Ono, Kohta Nakashima, and Akira Hirai

CANDAR 2014: Regular Papers

On State Number Calculation Problem in Petri Nets ................................................................. Mohd Anuaruddin Bin Ahmadon and Shingo Yamaguchi

Fault-Tolerant Routing for Irregular-Topology-Based Network-on-Chips ..................................... Vahid Babaei Ajabshir and Suleyman Tosun

Towards Transparently Tackling Functionality and Performance Issues across Different OpenCL Platforms ....................................................................... Giovanni Agosta, Alessandro Barenghi, Gerardo Pelosi, and Michele Scandale

A Parallel Algorithm for Enumerating Joint Weight of a Binary Linear Code in Network Coding ........................................ Shohei Ando, Fumihiko Ino, Toru Fujiwara, and Kenichi Hagihara
ASON 2014: (Seventh International Workshop on Autonomous Self-Organizing Networks) Regular Papers

A Frame Aggregation Extension of Routing Algorithm for Wireless Mesh Networks ...................................................................................................................................................238

Nobuo Funabiki, Yuuma Tani, and Shigeto Tajima

Characteristics Analysis of an AP Selection Method Based on Coordination Moving Both Users and APs ...................................................................................................................................................243

Ryo Hamamoto, Chisa Takano, Hiroyasu Obata, Kenji Ishida, and Tutomu Murase

UDP Throughput Evaluation Considering the Communication Distance between AP and Wireless Terminals over Multi-rate WLAN Environment .....................................................................................................................249

Kohei Izui, Hiroyasu Obata, Chisa Takano, and Kenji Ishida

Throughput Characteristics Evaluation of Media Access Control Method Based on Synchronization Phenomena of Coupled Oscillators over WLAN Coexisting of CSMA/CA Terminals ..................................................................................................................................................................................254

Hiroyasu Obata, Ryo Hamamoto, Chisa Takano, and Kenji Ishida

Performance Analysis of Fixed Node Assisted Opportunistic Routing for Ad Hoc Networks ..................................................................................................................................................................................260

Tatsuya Shirai, Taku Yamazaki, Ryo Yamamoto, Takumi Miyoshi, and Yoshiaki Tanaka

Performance Evaluation of Flow QoS Guarantee Method Based on TCP Congestion Control and MAC Frame Priority Control over Multi-rate WLAN Environment .....................................................................................................................................................266

Hikaru Tsushima, Ryo Hamamoto, Hiroyasu Obata, and Kenji Ishida

Multicast Delay of Mobile Ad Hoc Networks ..................................................................................................................................................................................272

Bin Yang, Yin Chen, and Xiaohong Jiang

Routing Algorithms for Preventing Energy Holes and Improving Fault Tolerance in Wireless Sensor Networks .....................................................................................................................................................278

Qian Zhao and Yukikazu Nakamoto

ASON 2014: (Seventh International Workshop on Autonomous Self-Organizing Networks) Poster Papers

Performance Evaluation of Mobile Agent-Based Service Collection and Dissemination Scheme Considering Entrance and Exit of Nodes in VANETs ..................................................................................................................................................................................................................................284

Takeshi Hashimoto, Junichi Aoki, Tomoyuki Ohta, and Yoshiaki Kakuda

Method of Edge Searching Considering Dynamics of Event Area for Wireless Sensor Networks ..................................................................................................................................................................................288

Hiroki Kadosawa and Takuya Asaka
Autonomous Load Balancing by Multipath Routing in Wireless Mesh Networks ..................................................292
   Takuo Takahashi and Takuya Asaka

   Yuri Tsutsui, Tomoyuki Ohta, and Yoshiaki Kakuda

Parameter Design for Efficient Link Utilization in Chaos-Based Transmission Rate Control ..........................................................300
   Liu Yongchao, Yusuke Sakamoto, Chisa Takano, and Masaki Aida

**PDAA 2014: (Sixth International Workshop on Parallel and Distributed Algorithms and Applications) Regular Papers**

A Collision-Free Contention Protocol Based on Pulse/Tone Signals ..........................................................304
   Marcos F. Caetano, Jacir L. Bordim, Luca Bedogni, and Luciano Bononi

Extensions of Active Access-Point Selection Algorithm for Wireless Mesh Networks Using IEEE802.11ac Protocol ..........................................................................................................................310
   Chang Choon Chew, Nobuo Funabiki, and Sho Fujita

Performance Evaluation of Adapting Many-Core Processors to the Optimization of a Shaped Reflector Antenna ..........................................................................................315
   Masato Gocho, Michio Takikawa, and Atsuo Ozaki

Global Optimization of Execution Mode Selection for the Reconfigurable PRAM-NUMA Multicore Architecture REPLICA ..........................................................322
   Erik Hansson and Christoph Kessler

A Routing Redundancy in a Geographic Location-Based Distributed Routing System ..........................................................................................329
   Kumiko Kobayashi, I. Gusti Bagus Baskara Nugraha, and Hiroyoshi Morita

On Liveness of Non-sound Acyclic Free Choice Workflow Nets ..........................................................................................336
   Naoki Nakahara and Shingo Yamaguchi

Reaction Systems for Logical Operations and Sorting ..................................................................................342
   Akifumi Nakanishi and Akihiro Fujiwara

An Exact Dynamic Programming Based Method to Solve Optimisation Problems Using GPUs ..........................................................................................347
   Jonathan F. O’Connell and Christine L. Mumford

Implementation of a Reliable Volunteer Computing System with Credibility-Based Voting ..........................................................................................354
   Sakai Takeshi and Masaru Fukushi

GPU-based Method for Denoising Time Series of Fluorescent Imaging Data ..........................................................................................360
   Denis Špelič, Niko Lukač, and Borut Žalik
A Memory Efficient Parallel Method for Voxel-Based Multiview Stereo ..................................................367
Yudai Tateishi, Masaru Fukushi, and Toru Abe

PDAA 2014: (Sixth International Workshop on Parallel and Distributed Algorithms and Applications) Poster Paper
A SPSM Based Parallel Algorithm for Computing a System of Linear Equations ..........................................................373
Hiroaki Yui, Tsuneyuki Hiramoto, and Minetada Osano

CSA 2014: (Second International Workshop on Computer Systems and Architectures) Regular Papers
A Preliminarily Evaluation of PEACH3: A Switching Hub for Tightly Coupled Accelerators ..........................................................377
Takuya Kuhara, Takahiro Kaneda, Toshihiro Hanawa, Yuetsu Kodama, Taisuke Boku, and Hideharu Amano

Darkfiber Planning for Extensible HPC Network Design under Uncertainties ..................................................382
Fabien Chaix, Ikki Fujiwara, and Michihiro Koibuchi

Performance Evaluation of a 3D-Stencil Library for Distributed Memory Array Accelerators ..........................................................388
Yoshikazu Inagaki, Shinya Takamaeda-Yamazaki, Jun Yao, and Yasuhiko Nakashima

Survivable Mapping for Virtual Network Request with Location Constraints ..................................................394
Liao Dan, Sun Gang, Cheng Ke, Yu Hongfang, and Zhi Tan

A Job Scheduling Method Based on Expected Probability of Completion of Voting in Volunteer Computing ..................................................399
Yuto Miyakoshi, Kan Watanabe, Masaru Fukushi, and Yasuyuki Nogami

A Hybrid Storage System Composed of On-the-Fly Automated Storage Tiering (OTF-AST) and Caching ..................................................406
Kazuichi Oe and Koji Okamura

ADvisor: A Hypervisor for Displaying Images on a Desktop ..........................................................412
Yoshihiro Oyama, Natsuki Ogawa, Yudai Kawasaki, and Kazuhiro Yamamoto

Automatic Code Tuning for Improving GPU Resource Utilization ..................................................419
Ryo Takeshima and Tomoaki Tsumura

Hinting for Auto-Memoization Processor Based on Static Binary Analysis ..................................................426
Takanori Tsumura, Yuuki Shibata, Kazutaka Kamimura, Tomoaki Tsumura, and Yasuhiko Nakashima

Priority-Based Conflict Resolution for Hardware Transactional Memory ..................................................433
Ryohei Yamada, Koshiro Hashimoto, and Tomoaki Tsumura
Accelerating OLAP Workload on Interconnected FPGAs with Flash Storage .................................................440
   Masato Yoshimi, Ryu Kudo, Yasin Oge, Yuta Terada, Hidetsugu Irie, and Tsutomu Yoshinaga

An Efficient Implementation of the One-Dimensional Hough Transform Algorithm for Circle Detection on the FPGA ..................................................................................................................447
   Xin Zhou, Yasuaki Ito, and Koji Nakano

**CSA 2014: (Second International Workshop on Computer Systems and Architectures) Poster Papers**

Cache Balancer: Access Rate and Pain Based Resource Management for Chip Multiprocessors ..................................................................................................................................................453
   Jurrien de Klerk, Sumeet S. Kumar, and Rene van Leuken

**AFCA 2014: (Second International Workshop on Applications and Fundamentals of Cellular Automata) Regular Papers**

Extracting Transition Rules from a 3-Dimensional Cellular Automaton Representing fMRI Data of a Visual Stimulus Experiment ..........................................................................................................................457
   Kenji Leibnitz, Tetsuya Shimokawa, and Ferdinand Peper

Community Detection Based on Graph Dynamical Systems with Asynchronous Runs .................................................................................................................................463
   Jiamou Liu and Ziheng Wei

On Limit Set of Two-Dimensional Two-State Linear Cellular Automaton Rules ............................................................................................................................................470
   Koichi Takada and Takao Namiki

**AFCA 2014: (Second International Workshop on Applications and Fundamentals of Cellular Automata) Poster Papers**

Reliable Crossing of Signals in Asynchronous Cellular Automata ..............................................................................476
   Tai-Ran He, Guo-Long Li, Jia Lee, and Ferdinand Peper

Self-Reproducing Loops on Asynchronous Cellular Automata with Aggregate Neighborhood Rules ...............................................................................................................................................480
   Teijjiro Isokawa, Koji Ono, Nobuyuki Matsui, and Ferdinand Peper

Fractal Patterns Created by Ulam’s Cellular Automaton ................................................................................................................484
   Akane Kawaharada

Traffic Network Design for Disaster Evacuation by Cellular Automata Simulation ........................................................................................................................................487
   Eisuke Kita, Azusa Hara, and Qingshuang Ye

Robot Vehicle Platoon Experiment Based on Multi-leader Vehicle Following Model ..........................................................................................................................................491
   Eisuke Kita, Hiroki Sakamoto, Hiroto Takaue, and Miichiro Yamada
On Swarm Networks in Brownian Environments ................................................................. 495
Masashi Mori, Teijiro Isokawa, Nobuyuki Matsui, and Ferdinand Peper

On the Composition of Signals in Cellular Automata .......................................................... 499
Shaoyu Wang, Katsunobu Imai, and Masami Hagiya

Embedding Game of Life into a Simple Asynchronous Cellular Automaton ....................... 503
Wen-Hu Zhou, Jia Lee, Guo-Long Li, and Katsunobu Imai

WICS 2014: (First International Workshop on Information and Communication Security) Regular Papers

An Access Control Framework for Semi-trusted Storage Using Attribute-Based Encryption with Short Ciphertext and Mediated Revocation ............................................................... 507
Kathleen Gay Figueroa and Susan Pancho-Festin

Direct Accessible Filter Using Succinct Data Structure for Packet Filtering ....................... 514
Yuta Kitamura, Akira Iwata, Masami Mohri, and Yoshiaki Shiraishi

An Application of XTR for the Discrete Logarithm Problem on Barreto–Naehrig Curve .......................................................................................................................... 519
Yuki Kono and Yasuyuki Nogami

Analyzing the Vulnerabilities in GWT Code and Applications ............................................ 525
Dave Larson, Jigang Liu, and Yanjun Zuo

Implementation of Anonymous Credential System with Efficient Proofs for Monotone Formulas on Attributes Excluding Restriction ................................................................. 531
Shahidatul Sadiah, Toru Nakanishi, and Nobuo Funabiki

An Implementation of Secure Data Exchange in Wireless Delay Tolerant Network Using Attribute-Based Encryption .............................................................................................. 536
Amang Sudarsono and Toru Nakanishi

Parallelization of QUAD Stream Cipher Using Linear Recurring Sequences on Graphics Processing Units ................................................................................................................. 543
Satoshi Tanaka, Chen-Mou Cheng, Takanori Yasuda, and Kouichi Sakurai

Towards a Complete Rule-Based Classification Approach for Flat Fingerprints .................. 549
Leandra Webb and Mmamolatelo Mathekga

WICS 2014: (First International Workshop on Information and Communication Security) Poster Papers

Novelty Detection-Based Internal Fingerprint Segmentation in Optical Coherence Tomography Images .................................................................................................................... 556
Rethabile Khutlang and Fulufhelo V. Nelwamondo

Improved Local Correlation Method for Fingerprint Matching .......................................... 560
Jiang Li, Sergey Tulyakov, and Venu Govindaraju
Malware Detection Method Focusing on Anti-debugging Functions ...........................................563
   Kota Yoshizaki and Toshihiro Yamauchi

WANC 2014: (Fifth International Workshop on Advances in Networking and Computing) Short Papers

The Proposal of Partial Sharing for Link-Sharing Method of Buffer in NoC Router ........................................567
   Naohisa Fukase, Yasuyuki Miura, Shigeyoshi Watanabe,
   and M.M. Hafizur Rahman

A Product Domain Model Based Software Product Line Engineering for Web Application ........................................572
   Takashi Nerome and Masayuki Numao

On the Hamiltonicity of the KCube Interconnection Network ........................................577
   Keivan Noroozi, Lily Zhao, and Ke Qiu

A Bee Colony Optimization Algorithm for a Connected Sensor Cover on GPGPU ........................................582
   Yukihide Sasamura and Akihiro Fujiwara

Truthful Allocation of Virtual Machine Instances with the Notion of Combinatorial Auction ........................................586
   Kasthuri Srinivasan and Satoshi Fujita

Detail Design and Evaluation of Fab Cache ........................................591
   Takaki Okamoto, Tomoyuki Nakabayashi, Takahiro Sasaki, and Toshio Kondo

WANC 2014: (Fifth International Workshop on Advances in Networking and Computing) Poster Papers

Coverage Criteria for State Transition Testing and Model Checker-Based Test Case Generation ........................................596
   Cassia de Souza Carvalho and Tatsuhiro Tsuchiya

A Study on Direction Estimation for Pedestrian Dead Reckoning ........................................599
   Hisashi Hoshi, Masahiro Fujii, Atsushi Ito, Yu Watanabe, and Hiroyuki Hatano

Online Memory Access Pattern Analysis on an Application Profiling Tool ........................................602
   Yuki Matsubara and Yukinori Sato

Design and Implementation of Organizational Authorization for a Network Monitoring System ........................................605
   Kenji Matsuura, Yosuke Seki, Masahiko Sano, and Tetsushi Ueta

FPGA Implementation of Viscous Function in a Package for Computational Fluid Dynamics ........................................608
   Dipikarani Mishra, Mao Hatto, Takuya Kuhara, Naoyuki Fujita, Yasunori Osana,
   and Hideharu Amano
Analyzing Behavior of Less Interrupt Overhead Architecture for Effective
Cache Utilization .................................................................611
Motoharu Nakajima and Shuichi Oikawa

Thorough Evaluation of GPU Shared Memory Load and Store Instructions ............................................614
Satoshi Okamoto, Yasuaki Ito, Koji Nakano, and Jacir L. Bordim

Set-Based Calculation of Topological Relations between Snort Rules ..................................................617
Yi Yin, Yun Wang, and Naohisa Takahashi

Author Index .................................................................................................................................620
