# TABLE OF CONTENTS

## PART 1

| Preface | ............................................................... 1 |
| A Combined Shape and Liner Optimization of a General Aeroengine Intake for Tone Noise | ............................................................... 5 |
| Reduction | ............................................................... 5 |
| S. Qiu, J.Y. Ying | ............................................................... 5 |
| A Frequency Domain Immersed Boundary Method and its Application to 2-dimensional Acoustic Problems | ............................................................... 21 |
| Flutter Influence Mode Analysis of High Speed Wing Model | ............................................................... 33 |
| Zhao Ling, Ji Chen, Yang Yinong, Liu Ziqiang | ............................................................... 33 |
| Sensitive Flutter Parameters Analysis with Respect to Flutter-free Design of Compressor Blade | ............................................................... 39 |
| Sun Hai, Yang Lin, Li Hongxin | ............................................................... 39 |
| Body Freedom Flutter of a Blended Wing Body Model Coupled with Flight Control System | ............................................................... 46 |
| Gu Yongsong, Yang Zhichun, He Shun | ............................................................... 46 |
| The Aeroelastic Characteristic of a Wing with Preload Asymmetry Freeplay | ............................................................... 51 |
| Hui Zhang, Jiaoguo Wu | ............................................................... 51 |
| Numerical Research on Segmented Flexible Airfoils Considering Fluid-structure Interaction | ............................................................... 57 |
| Dong Hefeng, Wang Chenxi, Li Shaobin, Song Xi Zhen | ............................................................... 57 |
| Guangxiang Chen, Bingyan Chen, Pengfei Li, Peng Bai, Chunqun Ji | ............................................................... 67 |
| Parameter Optimization Research on Lift-enhancing of Multi-element Airfoil Using Air-blowing | ............................................................... 73 |
| Yuqin Jiao, Yao Lu | ............................................................... 73 |
| Research on Multi-specialty Coordination, Multi-discipline and Multifunction Integration Oriented Modeling and Simulation Innovation Technology | ............................................................... 82 |
| Fan Lin, Cao Baohong, Liu Yifei, Yao Xionghua | ............................................................... 82 |
| The Application of Tooth Contact Analysis in the Shaper Modification for Face-gear | ............................................................... 94 |
| Canhui Wu, Ping Cao | ............................................................... 94 |
| Research on the New Airplane Develop System Based on 3D-digital Technique and Multi-companies Collaboration | ............................................................... 101 |
| Wang Qianping, Fan Lin, Wu Xiaohui | ............................................................... 101 |
| Calculation and Analysis on Stealth and Aerodynamics Characteristics of a Medium Altitude Long Endurance UAV | ............................................................... 111 |
| Su Haoqin, Bao Xiaoxiang, Li Jianhua, Liu Kai, Cen Mengxi, Song Jing | ............................................................... 111 |
| Aerodynamic Configuration Design of Flight Demonstrator for Real Gas Effect | ............................................................... 116 |
| Chen Bingyan, Liu Zhou, Gong Anlong | ............................................................... 116 |
| Aerodynamic Design and Numerical Simulation of Over-under Turbine-based Combined-cycle (TBCC) Inlet Mode Transition | ............................................................... 129 |
| Xiang Xianhong, Liu Yuan, Qian Zhanshen | ............................................................... 129 |
| Design and Simulations of a Guide-screw Hand-spike Nose Deflecting Mechanism | ............................................................... 137 |
| Hu Handong, Gu Liangxian, Sun Xiaofeng, Song Yifan, Shi Xiangpeng | ............................................................... 137 |
| Development and Production Costs Estimating for Aviation Equipment Based on Uncertainty Design | ............................................................... 143 |
| Huang Zhaoding, Luo Rongxuan, Jin Jing | ............................................................... 143 |
| System Dynamics Based Simulation Approach on Corrective Maintenance Cost of Aviation Equipments | ............................................................... 150 |
| Liu Fang, Huang Zhaoding | ............................................................... 150 |
| Recent Developments of Experimental Winged Rocket: Autonomous Guidance and Control Demonstration Using Parafoil | ............................................................... 156 |
| Design, Modeling and Analysis of a Sharp-edge Hypersonic Stealthy Re-entry Vehicle | ............................................................... 163 |
| Guofu Liu, Daochun Li, Jiuruw Xiang, Wenli Luo | ............................................................... 163 |
| Improving Electric Powered UAVs’ Endurance by Incorporating Battery Dumping Concept | ............................................................... 168 |
| Tan Chang, Hu Yu | ............................................................... 168 |
| Research on Probabilistic Safety Analysis Approach of Flight Control System Based on Bayesian Network | ............................................................... 180 |
| Chen Kang, Lu Zhong, Zeng Haijun | ............................................................... 180 |
Arrowhead-research on Design of Compound-UAV with Fenestron................................................................. 185
Shen Wei, Hou Lili
The Effects of Heat Exchanger on Ozone Retention............................................................................................ 192
Ke Peng, Yang Min, Zhang Shuguang, Yang Chunchin
Conceptual Design of Single-stage Rocket Using Hybrid Rocket by Means of Genetic Algorithm .................. 198
Masahiro Kanazaki, Athaphon Ariyutre, Kazuhisa Chiba, Koki Kitagawa, Toru Shimada
The Role of Electromagnetic Compatibility Qualification Considerations in Airborne System
Integration Programs ........................................................................................................................................... 208
Huiying Li, Mark Bolsover, Junhai Ye, Linfang Yan
Modeling the Performance of Aircraft Utilizing Maintenance Free Operating Periods.................................... 214
Zhaoyang Ren, Yueqin Wu
A Reliability Prediction Method Based on Simulation Analysis ........................................................................... 219
Luo Xuegang
Research on the MOIPSO Model for Collaborative Capability-flow Allocation in Multi-airports
terminal Area ....................................................................................................................................................... 224
Chen Hao, Wu Yi, Wang Zhan
An Agent-based Approach to Automated Merge 4D Arrival Trajectories in Busy Terminal
Maneuvering Area .................................................................................................................................................. 233
Liang Man
Real Time Image Haze Removal on Multi-core DSP .......................................................................................... 244
Linting Bai, Yongwei Wu, Jianchun Xie, Pengcheng Wen
Constructing an Index of Difficulty for Air Traffic Control Using Proximity Parameters ................................ 253
Sakae Nagaoka, Mark Brown
Optimization of Approach Trajectory Considering the Constraints Imposed on Flight Procedure
Design ................................................................................................................................................................. 259
Tomoki Hasegawa, Takeshi Tsuchiya, Ryota Mori
Three Dimensional Trajectory Linearization Control for Flight of Air-breathing Hypersonic Vehicle ............. 268
G.D. Zhu, Z.J. Shen
Study on Key Techniques of Aeronautical Ad Hoc Network MAC and Network Layer ..................................... 280
Qiming Qu, Zheng Fang, Cheng Gong
Yasuo Obikane
Support Vector with ROC Optimization Method Based Fuel Consumption Modeling for Civil Aircraft ............ 296
Zhang Huitfeng, Wang Xu-hui, Chen Xin-feng
Experimental Study on Spectral Characteristics of Kerosene Swirl Combustion............................................... 304
Hyeonjae Lee, Seonghyeon Seo
Numerical Study of the Combustion Field in Dual-cavity Scramjet Combustor ................................................ 313
Wang Lu, Qian Zhan, Gao Liangjie
Liu Zhiyong, Shang Qing, Liu Xiaoyong, Fei Lisen, Liu Fengjun
Numerical Studies of Multi-cycle Acetylene-air Detonation Induced by Shock Focusing ................................. 327
Zhihong Zhang, Zhiqiang Li, Gan Dong
Potential of ADN-based Ionic Liquid Propellant for Spacecraft Propulsion .................................................... 332
Yuichiro Ide, Takuya Takahashi, Keiichiro Iwai, Katsuhiko Nozoe, Hiroto Habu, Shinichiro Tokudome
Shock Tube Study on Auto-ignition Delay of Kerosene Aerosol and its Cracked Mixture ............................... 338
Shengli Xu, Qing Liao
Fracture Analysis of Thermal Barrier Coating Delamination under Thermal Shock .......................................... 344
Chen Ping-wei, Wang Shao-ming, Wang Feng-Hui
Improving Strain Field Measurements for Textile Composites ........................................................................ 349
G. Lu, L. Sun, M.Y. Matveev, A.I. Jones
Strain Monitoring on Damaged Composite Laminates Using Digital Image Correlation ................................. 353
Bataxi, Xi Chen, Zhongfeng Yu, Hai Wang, Cees Bil
Numerical Simulation Study on Propeller Slipstream Interference of High Altitude Long Endurance
Unmanned Air Vehicle ...................................................................................................................................... 361
Guangqiang Chen, Bingyan Chen, Pengfei Li, Peng Bai, Chuqun Ji
The Numerical Simulation of Civil Transportation High-lift Configuration .................................................... 368
Hao Xuan, Su Cheng, Hu Ning, Zhang Weimin
Effect of Recession on the Re-entry Capsule Aerodynamic Characteristic .................................................... 377
Xu Guowu, Zhou Weijiang, Chen Bingyan, Zhan Huiling, Yang Yunjun
Investigation of Airfoil Unsteady Aerodynamic Characteristics Based on Finite Macro-Element and TFI Hybrid Dynamic Mesh Correction .......................................................... 384
Tang Han, Guo Zhenxun

Real Gas Effect on a Standard Model Electre .................................................................................................................. 391
Junhong Li, Honglu Pan, Liang Zhang, Wenbo Miao, Zhi Chen, Xiaoli Cheng

Aerodynamic Design Optimization of a Kind of Reentry Capsule Based on CFD and Multi-objective Genetic Algorithm .................................................. 396
Wang Rong, Chen Bong-yan, Zhang Hong-jun, Zhou Wei-jiang, Bai Peng, Yang Yun-jun

Stress Distribution on Composite Honeycomb Sandwich Structure Suffered from Bending Load .................................................. 405
Chen Lu, Mengjie Zhao, Liu Jie, Jing Wang, Ya Gao, Xu Cui, Ping Chen

Numerical Study of the Leakage Flow on a Novel Turbine Blade Tip .......................................................... 413
Dengyu Jiang, Hualing Luo, Xiang Zhang

Numerical Simulation of Unsteady Separated Flow over a Delta Wing Using Cartesian Grids and DES/DDES .......................................................... 423
Meng Lv, Shuai Fang, Yudong Zhang

Effects of Nose and Corner Radius on Heat Transfer Rates over Axisymmetric Blunt Body .......................................................... 428
Zhang Liang, Chen Zhi, Gong Jian, Zhang Xuejun

A CFD Based Sonic Boom Prediction Method and Investigation on the Parameters Affecting the Sonic Boom Signature .......................................................... 433
Lengyan, Qian Zhansen

Detached Eddy Simulation on Hypersonic Base Flow Structure of Reentry-F Vehicle .......................................................... 452
Chen Zhi, Zhang Liang, Li Pengfei

Applications of Overset Grid Technique to CFD Simulation of High Mach Number Multi-body Interaction/Separation Flow .......................................................... 458
Li Xuefei, Liu Yuan, Qian Zhansen

Unstructured Adaptive Grid Refinement for Flow Feature Capture .................................................................................. 477
Liu Zhou, Yang Yunjun, Dong Anlong, Zhou Wei-jiang

The Aerodynamic Design and Investigation of Loading Distribution of a Mixed Flow Compressor .......................................................... 484
Chen Xuanyu, Meng Xiangwei, Gui Xingmin, Jin Donghai

Study on the Unsteady Aerodynamic Heating of the Oscillating Model ............................................................................... 491
Hu Peng-ju, Zhang Liang, Zheng Jin-xin

Influence of Geometric Scaling on Linear Cascade Aerodynamic Performance ................................................................................. 499
Chen Fen-fen, Gui Xing-min, Jin Dong-hai, Qiu Daohui

Kriging-algorithm-based Aerodynamic Model for Flush Airdata System ................................................................................. 507
Wang Yiben, Qin Ning, Liu Xueqiang

Investigation on Different Methods for Numerical Simulation of Propeller Slipstream .......................................................... 515
Zhang Ying, Ye Liang, Yang Shao, Zhu Xinglin

Study on the Design of Supersonic Axisymmetric Multicompression and Quasi-isentropic Inlets .......................................................... 530
Juang Yunsong, Gao Zhenxun, Jiang Chongwen

A Modification Technique of Collision Probability in the Direct Simulation Monte Carlo Method .......................................................... 536
Huang Fei, Li Pengfei, Jin Xu-hong, Liu Xiaowen, Cheng Xiaoli

Study on Two-dimensional Wing Flutter Analysis by a High-order Flux Reconstruction Method .......................................................... 543
Issel Morinaka, Koji Miyaji

Design and Dynamic Analysis of Micro-vibration Isolator for Single Gimbal Control Moment Gyro .......................................................... 551
Shenghao Shi, Dongxu Li, Qing Luo

Modeling of the Heat Interface of a Plasma Actuator .................................................................................................................. 560
Yasuo Obikane, Khemebedkh Lochin

Numerical Simulation for Changes in Aerodynamic Characteristics Along the Spanwise of “Diamond Back” Wing .......................................................... 566
Junkui Chen, Zhijun Wang, Juanting Zhang, Lianbo Zhang, Guodong Wu

A 3D Anisotropic Cartesian Grid Generation Method and its Applications in Viscosity Flows .......................................................... 575
Xiaoan Shi, Shuai Fang, Meng Lv, Ning Hu

The Study on Longitudinal Aerodynamic Characteristics of a Novel MAV Layout ............................................................................... 581
Tang Wei, Song Bifeng, Wang Jin

Evolutionary Maintenance Based on Maintenance Free Operating Period Philosophy .......................................................... 587
Ming Xu, Yueqin Wu

Influence of High-temperature Air on Three-dimensional Nozzle Structure Design .......................................................... 593
Bu Junhui, Liu Huayin, Wang ying, Sun Yongtang

Six-DOF Modeling and Simulation for Generic Hypersonic Vehicle in Reentry Phase .......................................................... 600
Wang Chao, Liu Xinyu, Li Feng

Surface Recombination Effects on Surface Friction of Reentry Vehicles .......................................................... 607
Miao Wenbo, Huang Fei, Zhang Liang, Cheng Xiaoli
Numerical Study on Drag Reduction by Micro-Blowing/Suction Compounding Flow Control on Supercritical Airfoil .......................................................... 613
Cai Junxuan, Gao Zhen Xun

Study on the Vortex Shedding Mechanism of Coupling Combustion Stabilizer with V-gutter and Strong Swirl Flow .......................................................... 618
Guo Dong, Zhiqiang Li, Zhihong Zhang

Research on the Design Methods of Channeled Centerbody Supersonic Inlet .......................................................... 623
Cheng Tonggang, Wang chuanghui, Hu Wentao

Comparison between High Order Schemes Related Convection Diffusion of Navier-stokes Equations .......................................................... 628
Xie Yan, Wang Huiying, Zeng Weiping, Xu Zhanjun

An Experimental Investigation of Showerhead Film Cooling Performance on a Turbine Blade .......................................................... 634
Zhu Xingdan, Zhang Jingzhou, Tan Xiaoming

Applying CFD Technology to Determine the Effect of Two New Designed Fan Inlet Distortion Generators .......................................................... 646
Li Zhipeng, Lu Chao, Wu Hui, Liu Xiaopen, Zhang Guowang

A Long-term Analysis of the GPS Broadcast Orbit and Clock Error Variations .......................................................... 654
Mingyu Kim, Jeongrae Kim

Test Particle Monte Carlo Simulation of Return Flux on Various Geometric Surfaces due to Ambient Scatter of Outgassing Molecules .......................................................... 659
Xuhong Jin, Fei Huang, Zhi Chen, Xiaoli Cheng

Investigation on Spanwise Wall Oscillation in Turbulent Channel Flow Based on Reynolds Stress Model (RSM) .......................................................... 665
Duan Dehao, Zhang Jinbai, Gao Zhenxun

Study on the Heat Transfer Characteristics in Aircraft Icing .......................................................... 671
Zhi-Hong Zhou, Xian Yi, Ye-Wei Gui, Yan-Xia du

An Immersed Boundary Method Based on Volume Fraction .......................................................... 677
Yuelong He, Dun Li, Shuai Liu, Handong Ma

Airfoil Dynamic Stall and Aeroelastic Analysis Based on Multi-frequency Excitation Using CFD Method .......................................................... 686
Daobo Huang, Jiandong Li, Yong Liu

Optimization of Suction Control on an Airfoil Using Multi-island Genetic Algorithm .......................................................... 696
D.J. Zhao, Y.K. Wang, W.W. Cao, P. Zhou

Surrogate Model of Aerodynamic Model toward Efficient Digital Flight .......................................................... 703
Norazila Othman, Masahiro Kanazaki

Verification of a Chemical Nonequilibrium Flows Solver Using the Method of Manufactured Solutions .......................................................... 713
Li Wang, Wei-jiang Zhou, Chu-qun Ji

Analysis of Aerodynamic Design Characteristics of Flade Fan .......................................................... 723
Zeng Yuehua, Wei Yuan

Unsteady Flow Numerical Simulation of Vertical Axis Wind Turbine .......................................................... 734
Du Gang, Wu Chun Kau

Study on the Vortex Structure of Coupling Combustion Stabilizer with Square Cylinder-strong Swirl Flow .......................................................... 741
Gan Dong, Zhiqiang Li, Zhihong Zhang

Experimental Investigation of Heat Transfer Performance of Rotating Heat Pipe .......................................................... 746
Minghui Xie, Zhihua Xue, Wei Qu, Wei Li

Simulation Study of Cooling System Temperature Control Based on Subsection Control .......................................................... 752
Wang Jiali, Li Yanna

Experimental Investigation on Flow Characteristics of Gas in Micro-channels .......................................................... 758
Zhang Kai, Zheng Guanghua, Du Fenglei

Numerical Simulation and Thermal Analysis of Stratospheric Airship .......................................................... 763
Kangwen Sun, Qinchen Yang, Yang Yang, Shun Wang, Yong Xie, Mou Sun, Xiaoming Chen, Jianming Xu

Patent Analysis of the Course of Aerojet's Business and the Key Technologies of Hypersonic .......................................................... 773
Li Yelan, Bai Yang, Zhou Peng

The Testing Simulation Technology Investigation on the Thermal Environment of Engine Combustor Wall Material .......................................................... 780
Tu Jianqiang, Chen Lianzhong, Zhang Youhua

Research of Model-based Aeroengine Control System Design Structure and Workflow .......................................................... 788
Dong Zhang, Jin-zhi Lu, Lin Wang, Jun Li

Review – Volcanic Ash and its Influence on Aircraft Engine Components .......................................................... 795
W.R. Chen, L.R. Zhao
Development Strategy Study for Commercial Aero Engine Companies in European Countries and the United States ................................................................. 804
Liu Hongxia, Zhang Shifu, Liang Chunhua, Liu Qi

Study of the Pressure Drop and Thermal Performance of an Air-Air Heat Exchanger for Aero-engine Application .......................................................... 812
Lu Haiying, Lv Duo, Yu Xiao, Li Yi, Shen Yi, Dong Wei

PART 2

Numerical Simulation of Direct Action Liquid Rocket Engines Hydro Mechanical Flow Controllers .................. 822
Iana Bakhmet, Zhang Lihui

Study of the Dump Diffuser Optimization for Gas Turbine Combustors ................................................................. 828
Leilei Xu, Yue Huang, Can Ruan, Peiyong Wang and Fei Xing

The Study of Process Reliability of Aircraft Engine ....................................................................................... 835
Wang Ji Ming, Huang Min, Yi Jun, Liu Xue Jun

Performance Estimation for Differential Pressurization Pulse Jet Engine .............................................................. 840
Zhang Jianpeng, Qin Lizi, He Miaosheng

The Effect of the Inlet Total Pressure and the Number of Detonation Waves on Rotating Detonation Engines .................................................................. 848
Song-Bai Yao, Meng Liu, Jian-Ping Wang

Orbit Design for Approaching Multiple Space Objects in a Circular Orbit ......................................................... 853
Wei Tanyan, Wang Hongyu, Lv Zhaofu

Study on Algorithms of Flush Air Data Sensing System for Hypersonic Vehicle .............................................. 860
Guangqiang Chen, Bingyan Chen, Pengfei Li, Peng Bai, Chunjun Ji

Nine-degree of Freedom Modeling and Flight Dynamic Analysis of Parafoil Aerial Delivery System ................ 866
Yu Gang

Morphing Process Research of UAV with PID Controller ...................................................................................... 873
Su Haqin, Huang Zhan, Bao Xiaoxiang, Shi Hongwei, Song Jing

The Effect of Airflow over Mountains on Flight Safety ......................................................................................... 878
Chen Junping, Wang Linxin

Flapping Wing Multi-body Dynamic Simulation ................................................................................................. 885
Zhong Jingyang, Song Bifeng, Wang Jin

Numerical Simulation of Wind Field over Complex Terrain and its Application in Jiuzhaigou Airport .......... 891

Assessment of Landing Gear Design Based on the Virtual Testing and Evaluation Methodology ......................... 898
Liu Hailiang, Wang Linxin

Behavior of Tether for Captive Stratosphere Platform Using Airship ................................................................. 905
Kazuhisa Chiba, Shin Satori, Ryuichi Mitsuhashi, Jun’ya Sasaki, Ryojiro Akiba

An Experimental Investigation of the Supersonic Planar Mixing Layer with Infinite Thickness ...................... 911
Hailong Zhang, Jiping Wu, Jian Chen, Wendiou Liu

The Optical Flow Method Research of Particle Image Velocimetry ..................................................................... 918
Wang Hongwei, Huang Zhan, Gong Jian, Xiong Hongliang

Aerodynamic Characterization of ‘Delfly Micro’ in Forward Flight Configuration by Force Measurements and Flow Field Visualization ........................................... 925
Shuanghou Deng, Mustafa Percin, Bas van Oudheusden

Numerical Simulation of the Atomization Process of a Like-doublet Impinging Rocket Injector ......................... 930
Gang Zheng, Wansheng Xie, Songqiang Feng, Guoyang Wu

Atomization Performance Study of a Fuel Injector in IGC by Experimental and Numerical Investigation .......... 939
Can Ruan, Xiaoyuan Fang, Guanzxing Huang, Hongzhou Ho, Fei Xing

Observation of Kerosene Injected from a Cavity into a Supersonic Airstream ........................................................ 948
Shengli Xu, Liseng Fei

An Experimental Investigation on Combustion Characteristics of Hypermixer Injectors—Effects of the ‘Swept’ Applied to Hypermixer Injector Ramps ................................................................. 954
Noritsugu Kato, Atsuo Murakami, Kenji Kudo, Sadatake Tomioka

Maneuver Strategy Adaptive Target Tracking Algorithm by Integrated Kalman Information Filtering ............... 961
Ying Li, Deyun Zhou, Hao Zhang

1.1 Adaptive Dynamic Inversion Controller for an X-wing Tail-sitter MAV in Hover Flight ................................. 969
Wang Jin, Song Bifeng, Wang Liguang, Tang Wei
Anti Measure Noise Research of Morphing Wing UAV ................................................................. 975
Su Haqin, Bao Xiaoxiang, Shi Hongwei, Liu Kai, Song Jing

The Test Verification Design Method Based on Rapid Prototyping Technology of Aero-engine ................................................................. 981
Xiao-Jie Qiu, Wen-Hua Zheng, Yu-Ting Tang, Feng Lu

Assessment Model of the Architecture of the Aerospace Embedded Computer ................................................................. 991
Wei Han, Xiaoqing Bai, Jianchuan Xie

Hybrid Re-entry Guidance for Reusable Launch Vehicle ................................................................................................................................. 999
Wang Zhi, Zhang Ran, Li Huifeng

A Comparison Study of Advanced Track-to-track Association Algorithm without Time Alignment................................................................. 1005
Wang Hongwei, Wang Heping

Efficient Nonlinear Algorithm for Drag Tracking in Entry Guidance ................................................................................................................................. 1014
Xin Du, Hai-Yang Li, Yue-Chen Huang

Research on Adaptive Guidance Technology of UAV Ship Landing System Based on Net Recovery ................................................................. 1027
Wang Kai, Sun Chunze, Jiang Yi

Flight Evaluation of Fault-tolerant Control System Using Simple Adaptive Control Method ................................................................. 1035
Daichi Tokunaga, Kazuya Masui, Shinji Suzuki

The Ascent Trajectory Optimization of Two-Stage-To-Orbit Aerospace Plane Based on Pseudospectral Method ................................................................................................. 1044
Jing Song, Haqin Su

Model Predictive Flight Controller Using Prior Air Disturbance Information Obtained by Doppler LIDAR ................................................................................................................................. 1049
Seiya Miyagaki, Shinji Suzuki

Mars Atmospheric Entry Guidance Design by Sliding Mode Disturbance Observer-Based Control ................................................................. 1062
Yue-Chen Huang, Hai-Yang Li, Jin Zhang, Xin Du

Predictive Sliding Mode Control Using Feedback Linearization for Hypersonic Vehicle ................................................................................................................................. 1076
Xianlei Cheng, Peng Wang, Luhua Liu, Guojian Tang

Monte Carlo Analysis for Significant Parameters Ranking in RLV Flight Evaluation ................................................................................................................................. 1082
Jie Gu, Shuguang Zhang, Baoyin Wang

Application Research of MRAC in Fault-tolerant Flight Controller ................................................................. 1089
Shuguang Zhang, Yang Feng, Di Zhang

Key Techniques Research on UAV Data Link ................................................................................................................................. 1099
Jinti Li, Yongfei Ding, Zheng Fang

Three Dimensional Trajectory Linearization Control for Flight of Air-breathing Hypersonic Vehicle ................................................................................................................................. 1108
G.D. Zhu, Z.J. Shen

An Asynchronous Track-to-track Association Algorithm without Time Alignment ................................................................................................................................. 1120
Yi Xiao, Han Junyue, Guan Xin

New Method of Ground Target Recognition Based on Stable Edge Weighted HOG ................................................................................................................................. 1126
Wentao Shen, Xiaoxing Ding, Changping Liu, Chi Fang, Bin Xiong

Development of Large-scale 3D Map Generation System for Indoor Autonomous Navigation Flight – Work in Progress ................................................................................................................................. 1132
SungTae Moon, Wensub Eom, Hyunchul Gong

Research Progress and Future Development on Mission Planning Technologies of Planetary Rover ................................................................................................................................. 1137
Wang Qiong, Yu Dengyun, Jia Yang

Investigation of Estimation Methods for Time-varying Residual Magnetic Moment ................................................................................................................................. 1146
Halil Ersin Soken, Shin-ichiro Sakai

The Research of Temperature Indicating Paints and its Application in Aero-engine Temperature Measurement ................................................................................................................................. 1152
Li Yang, Li Zhi-min

Dimensional Measurement of Small Hot Pieces Based on a Monochrome CCD ................................................................................................................................. 1158
Bi Chao, Qi Xinghua, Liu Yong, Liu Yaping, Liu Jingliang

Design and Calibration of a Six-axis Force/torque Sensor with Large Measurement Range Used for the Space Manipulator ................................................................................................................................. 1164
Danfeng Chen, Aiguo Song, Ang Li

Research on 3D Virtual Environment Modeling Technology for Space Tele-robot ................................................................................................................................. 1171
Biyu Zhu, Aiguo Song, Xiaoanong Xu, Song Li

Sapphire Fiber-optic Temperature Sensor Based on Black-body Radiation Law ................................................................................................................................. 1179
Wang Wei, Shi Xiaotian, Wang Ying

Implication of Dynamic Unbalance to the Inertial Accelerometer Calibration with Vibrafuge ................................................................................................................................. 1185
Xue-Ming Dong, Wei Guan, Xiao-Feng Meng

A Novel Data Association Algorithm for Unequal Length Fluctuant Sequence ................................................................................................................................. 1190
Xin Guan, Guidong Sun, Xiao Yi, Qiang Guo
Research on Fiber Bragg Grating Acoustic Emission Technology Applied in Helicopter Bearing Detection
Gao Xuan, Zhang Xiaopeng, Li Ning, Pei Xin .......................................................... 1203
Feasibility of an Electrostatic Energy Harvesting Device for CFCs Aircraft
Huilong Xie, Zhaorong Huang, Shijun Guo, Ekiyor Torru ............................. 1213
Solutions to Improve Multiple Configuration Systems Resolution in Sensors
LIU Hua, DING Quanxin, ZHOU Liwei .......................................................... 1223
Topology Optimization Method Research on Hollow Wide-chord Fan Blade of a High-bypass Turbofan Engine
J. Meng, L.F. Liu, D. Li, Y. Cao, L.Y. Yang, Y.Y. Chen .......................................................... 1228
Synthesis of Polythioether and Heat Resistant Property of Polythioether Sealants
Guo Ruiyi, Zhang Jianzheng, Wu Songhua .......................................................... 1234
Shape Memory Alloy in Various Aviation Field
Du Quan, Xu Hai .................................................................................................. 1241
Optimization Selection of Regulated Pressurization System Schemes for Liquid Attitude and Divert Propulsion Systems
Lü Liu, Guozhu Liang .................................................................................................. 1247
Investigation on Effective Sampling Strategy for Multi-objective Design Optimization of RBCC Propulsion Systems via Surrogate-assisted Evolutionary Algorithms
Tuan Quang Ho, Hideaki Ogawa, Cees Bil .......................................................... 1252
Research on the Influence of Reflected Shock Wave on Continuously Rotating Detonation Engine
Liu Yu-si, Li Yang, Wang Yu-hai, Wang Jian-ping .......................................................... 1263
Experimental Report on the Nano-identification Testing of Textured Stainless Steel 904 L and 316 L
Changjian Geng, Liu Fang, Tong Wenwei, Han Zhenyu, Chi Qingxin ................. 1268
Multidisciplinary Design Optimization of Turbine Disks Based on ANSYS Workbench Platforms
Qi Xiaodong, Shen Xiali .......................................................................................... 1275
Aeroengine Reliability Prediction Based on Fuzzy and Interval Number
Zhao De-zi, Cai Na .................................................................................................. 1284
Failure Analysis of Rubbing of the Fan Tip and Case of an Engine
Wei Feifei, Chen Yunyong, Wu Zhiqing, Chen Lalu, Meng Jin .......................................................... 1289
Optimal Design Aircraft Engine Mount Systems
Jiang Xianghua, Du Ran .......................................................................................... 1297
Microstructure Evolution of K6509 Cobalt-base Superalloy for Over-temperature
Wei Zhen-wei, Zhao Wen-xia, Zhou Jing-yi, Liu Chang-kui, Zheng Zhen, Qu Shi-yu, Tao Chun-hu .......................................................... 1302
Safety of Lap-held Infants in Aircraft
Cees Bil, Adam Shrimpton, Graham Clark .................................................................................................. 1311
Prediction of Low Cycle Fatigue Crack Growth under Mixed-mode Loading Conditions Using Cohesive Zone Models
Yuan Huang, Li Huan, Li Xiao .................................................................................................. 1317
Characterization of a Metastable Austenitic Stainless Steel with Severe Plastic Distortions
Zeng Wu, Yuan Huang .................................................................................................. 1323
Design and Performance Analysis of an Electromagnetic Tricycle Operated in an Airport
Puttaratorn Ekapun, Toh Yen Pang .................................................................................................. 1330
Technology and Application of Identifying Dynamic Loads Based on Flight Test Data
Chen Liebin, Jin Wei, Shi Shanglu .................................................................................................. 1339
Study on Impact Dynamics of Development for Solar Panel with Cylindrical Clearance Joint
Wang Xu-peng, Liu Geng .................................................................................................. 1345
Labyrinth Seals Diameter and Length Effect Study on Nonlinear Dynamics
Ma Wensheng, Huang Hai, Feng Guoquan, Chen Zhaobo, R.G. Kirk .......................................................... 1358
Structural Damping Effect on Deformation of Flexible Flapping Wing
Xue Dong, Song BiFeng, Yang WenQing, Fu Peng .................................................................................................. 1365
Vibration Reduction of a Bearingless Helicopter Rotor with Composite Tailored Couplings
Yu Jin, Luo Yu, Liu Yong .................................................................................................. 1372
Design and Simulation of Long Slender End Mill Embedded with Passive Damper
Yang Yiqing, Yu Ya .................................................................................................. 1380
TC4 Hollow Fan Blade Structural Optimization Based on Bird-strike Analysis
Zeng Chuan, Jiang Xiang-hua, Chai Xiang-hai, Shi Tong-cheng .......................................................... 1385
Statistic Strategy of Damage Detection for Composite Structure Using the Correlation Function Amplitude Vector
Xiaojuan Dang .................................................................................................. 1395
