2015 International Conference on Learning and Teaching in Computing and Engineering

(LaTiCE 2015)

Taipei, Taiwan
9-12 April 2015
Table of Contents

Message from General Chairs ................................................................. xi
Conference Organization ........................................................................... xii
Program Committee .................................................................................. xiii
Reviewers ................................................................................................. xiv
Keynote .................................................................................................... xvi
Invited Talk ............................................................................................... xvii
Doctoral Consortium Workshop ............................................................. xviii

Special Session: Culturally Situated Teaching
Teaching and Learning Computer Science at Al Baha University, Saudi Arabia: Insights from a Staff Development Course ................................................................. 1
  Anders Berglund, Arnold Pears, Aletta Nylén, Farooq Ahmad, Bader Alghamdi,
  Khalid Alghamdi, Ahmed Alhabish, Abdullah Aljoufi, Eidah Alzahrani,
  Rami Alzahrani, Ismat Aldmour, Areej Athama, Hamada Shihab Alsadoon,
  Rahmat Budiarto, Abdul Hafeez, Nadeem Hassan Daudpota, Dhafer Faiz,
  Lubna Abdel Kareim Gabralla, Mohammad Gamar, Abdul Hannan,
  Bedine Kerim, F.A. Mazarbhuiya, Ahmed Rabea, Muhammad Qaiser Saleem,
  Nimir Saleh, and Mohamed Shenify

Incorporating R&D Activities Into Computer Engineering Teaching & Learning
Program in Al Baha University ....................................................................... 7
  Mohammed Shenify, Rahmat Budiarto, Sultan Aljahdali, and Hisham M. Alsaghier

Session 1: Instructional Media
Session 1-1
Interactive Learning Content for Introductory Computer Science Course Using the ViLLE Exercise Framework .................................................................9
Ville Karavirta, Riku Haavisto, Erkki Kaila, Mikko-Jussi Laakso, Teemu Rajala, and Tapio Salakoski
Effect of Medium of Instruction on Programming Ability Acquired through Screencast .............................................................................................................17
Yogendra Pal and Sridhar Iyer

Session 1-2
Teaching High School Computer Science with Videos of Historical Figures—An Augmented Reality Approach ..........................................................22
Ching-Yin Hsu, Mei-Wen Chen, and Cheng-Chih Wu
Students' Experiences on Using Nerepa: A Web-Based System for Students to Learn Financial Analysis Methods ......................................................26
R.T. Hans, N.D. Chuene, and C.K. Lepota
Support System for Romaji Learning through Exercise .................................................................................................................................30
Kai Yawata, Noriko Akazawa, Dan Takeda, Yasuichi Nakayama, Hiroyasu Kakuda, and Mitsugu Suzuki

Session 2: Assessment

Session 2-1
Evaluation of Programming Competency Using Student Error Patterns .......................................................34
Eranksi L.N. Kiran and Kannan M. Moudgalya
Integrating Cognitive Apprenticeship Strategy with the Use of Online Forum in Developing Product Assignments .................................................42
Mohd Fadzli Ali, Lokman Tahir, Mohd Nihra Haruzuan Md Said, and Nursyakila Mat Tahir

Session 2-2
Harmful Study Habits in Online Learning Environments with Automatic Assessment .........................................................50
Tapio Auvinen
Observation System for Assessment of Learning Engagement in Various Pedagogies .................................................................58
Bosede I. Edwards, Nurbiha A. Shukor, and Baharuddin Aris
Session 2-3
Investigating the Psychometric Structure of Bebras Contest: Towards Measuring Computational Thinking Skills .................................................................62
Peter Hubwieser and Andreas Mühling

A Framework for Generic Exercises with Mathematical Content ..................................................70
Filiz Kurt-Karaoglu, Nils Schwinning, Michael Striewe, Björn Zurmaar, and Michael Goedicke

Assessing the Maturity of Teamwork Capabilities through Capstone Project ...................................76
Vu T. Truong, Bao N. Le, and Man D. Nguyen

Session 3: Theories of Learning

Session 3-1
On the Bimodality in an Introductory Programming Course: An Analysis of Student Performance Factors ...............................................................................79
Lars Josef Höök and Anna Eckerdal

Metacognitive Scaffolding to Support Students in Learning Authoring System Subject ..............................................................87
Nurul Farhana Jumaat and Zaidatun Tasir

About Didactic Transposition: Teaching programming fundamentals at different levels of the school system ...........................................................................91
Jesus Insuasti and Juan Manuel Dodero Beardo

Session 3-2
Investigating the Impact of In-Class Assignments on Higher Order Thinking Skills of Students in Engineering Course ...............................................................95
Rekha Ramesh and Uma R. Rao

Session 3-3
Nurturing Social-Cultural Process of Creativity in the Higher Education within Social Network Sites (SNS) ........................................................................100
Zaleha Abdullah and Mohd Nihra Haruzuan Mohamad Said

Assuring the Quality of Engineering Education .................................................................................108
Arnold Pears
**Session 4: Collaborative Learning**

**Session 4-1**
Engaging School Students with Tangible Devices: Pilot Project with .NET Gadgeteer ..........................................................112
   *Neena Thota, Gerald Estadieu, Antonio Ferrao, and Wong Kai Meng*

On the Participatory Design of Jeliot Mobile: Towards a Socio-Constructivist Mlearning Tool ..........................................................120
   *Muhammad Mustafa Hassan, Andrés Moreno, Erkki Sutinen, and Abdul Aziz*

Scrumming with Educators: Cross-Departmental Collaboration for a Summer Software Engineering Capstone ........................................124
   *Timothy T. Yuen*

**Session 4-2**
Investigation of Social Networks and Discussions in STEM Education Communities on Twitter ..........................................................128
   *Timothy T. Yuen and Trevor A. Pickering*

A Meta-Analysis on Students’ Argumentative Knowledge Construction Process in Social Collaborative Learning Environment ........................................134
   *Siti Nur Khadijah Aishah Ibrahim and Jamalludin Harun*

Collaborative Learning Support System in a Classroom Using Ad Hoc Network of Tablet Devices ..................................................142
   *Naoya Sasaki, Yuta Hanai, Noriko Akazawa, Yasuichi Nakayama, and Ichiro Yamaguchi*

**Session 5: Teaching Data Structures**
Thinking, Pairing, and Sharing to Improve Learning and Engagement in a Data Structures and Algorithms (DSA) Class ..........................144
   *Patil Deepti Reddy, Shitanshu Mishra, Ganesh Ramakrishnan, and Sahana Murthy*

Data Structures in Flipped Classroom: Students’ Effort and Preference .................................................................152
   *Greg C. Lee and Pei-Lun Lee*

**Session 6: Problem Solving**
Virtually Unplugged: Rich Data Capture to Evaluate CS Pedagogy in 3D Virtual Worlds ..............................................................156
   *David Thompson and Tim Bell*
Delayed Guidance: A Teaching-Learning Strategy to Develop Ill-Structured Problem Solving Skills in Engineering ................................................................. 164
  Aditi Kothiyal, Bipin Rajendran, and Sahana Murthy

Effects of Past Projects on the Education Experience of Civil Engineering Students ................................................................. 172
  Lau Teck Leong and Wael Elleithy

Session 7: Implications of Variation in Learning
Studies on Patterns and Variations of Learning Community of Practices in Global Context ................................................................. 176
  Karen Yi-Chwen Kuo and Chi-Syan Lin

Learning Practice and Theory in Programming Education: Students’ Lived Experience ................................................................. 180
  Anders Berglund and Anna Eckerdal

Session 8: Adaptive Learning
How Learning Styles in CS Can Foster Inclusion of Visually Impaired Students ................................................................. 187
  Dino Capovilla, Andreas Mühling, and Peter Hubwieser

Learning Styles vs. Activities and Assessment in an Engineering Technology Course: Match or Mismatch? ................................................................. 193
  Alina Shamsuddin, Chee-Ming Chan, Suzana Ojudah, and Azeanita Suratkon

Handling Heterogeneity in Programming Courses for Freshmen ................................................................. 197
  Dino Capovilla, Marc Berges, Andreas Mühling, and Peter Hubwieser

Poster Session
A Flash-Based Animation Program of Illicit Drug Prevention for High-Risk Adolescents: A Flash-Based Animation Program of Illicit Drug Prevention ................................................................. 204
  Jung-Yu Liao, Chiu-Mieh Huang, and Jong-Long Guo

Case-Based Instruction of "How Computer Works" Courses for High School Students ................................................................. 207
  Ting-Chung Wang

Collaborative Learning in Computer Programming Courses That Adopted the Flipped Classroom ................................................................. 209
  Yasuhiro Hayashi, Ken-Ichi Fukamachi, and Hiroshi Komatsugawa

Computational Thinking Curriculum for K-12 Education–A Delphi Survey ................................................................. 213
  Hui-Chi Chuang, Chiu-Fan Hu, Cheng-Chih Wu, and Yu-Tzu Lin
Designing Teacher Professional Development Workshops for Robotics Integration across Elementary and Secondary School Curriculum ..........................................................215

Hong Zhou, Timothy T. Yuen, Cristina Popescu, Adrienne Guillen, and Don G. Davis

Effects of Adaptive Learning on Active Learners’ Learning Performance in Online Learning Environment ........................................................................................................217

Norazlina Ahmad, Zaidatun Tasir, Fa'izah Hamzah, and Mazura Mat Din

Introducing Scratch as the Fundamental to Study App Inventor Programming ........................................219

Chiung-Fang Chiu

Learning Geometry with Augmented Reality to Enhance Spatial Ability ..................................................221

Yi-Ting Liao, Chih-Hung Yu, and Cheng-Chih Wu

Programming Examples Analysis of Commercial Vocational High School Textbooks in Taiwan .................................................................................................................................223

Chiung-Fang Chiu

Which Programming Language Should Students Learn First? A Comparison of Java and Python ...................................................................................................................................225

Chieh-An Lo, Yu-Tzu Lin, and Cheng-Chih Wu

Author Index ............................................................................................................................................227
