Part I: Long Papers

Data Science and Analytics in Security Informatics

Analysis of Criminal Social Networks with Typed and Directed Edges ........................................... 1
Quan Zheng, David B. Skillicorn, Francesco Calderoni

Spectral Malware Behavior Clustering ......................................................................................................... 7
Chris Giannella, Eric Bloedorn

A Visual Analytics Approach to Detecting Server Redirections and Data Exfiltration ......................... 13
Weijie Wang, Baijian Yang, Victor Yingjie Chen

SPINN: Suspicion Prediction in Nuclear Networks .................................................................................. 19
Ian A. Andrews, Srijan Kumar, Francesca Spezzano, V.S. Subrahmanian

Learning Where to Inspect: Location Learning for Crime Prediction ..................................................... 25
Mohammad A. Tayebi, Uwe Glässer, Patricia L. Brantingham

Exploring Hacker Assets in Underground Forums ..................................................................................... 31
Sagar Samtani, Ryan Chinn, Hsinchun Chen

Organizational, National, and International Issues in Counter-terrorism or Security Protection

Multi-objective Evolutionary Algorithms and Multiagent Models for Optimizing Police Dispatch .......... 37
Ricardo Guedes, Vasco Furtado, Tarcisio Pequeno

Nonproliferation Informatics: Employing Bayesian Analysis, Agent Based Modeling, and Information Theory for Dynamic Proliferation Pathway Studies ............................................. 43
Royal A. Elmore, William S. Charlton

Linking Virtual and Real-World Identities .................................................................................................. 49
Yaqoub Alsarkal, Nan Zhang, Yilu Zhou

Emotion Extraction and Entrainment in Social Media: The Case of U.S. Immigration and Border Security ................................................................................................................................. 55
Wingyan Chung, Saike He, Daniel Dajun Zeng, Victor Benjamin

Empirical Assessment of al Qaeda, ISIS, and Taliban Propaganda ............................................................ 61
D.B. Skillicorn

Human Behavior in the Security Applications

Exploring the Effect of Permission Notice on Users’ Initial Trust to An Application Store:
The Case of China’s Android Application Market ................................................................................. 67
Jie Gu, An’An Hu, Heng Xu, Lihua Huang
LECENing Places to Hide: Geo-Mapping Child Exploitation Material .............................. 73
Bryan Monk, Russell Allsup, Richard Frank

Developing Understanding of Hacker Language through the use of Lexical Semantics .................. 79
Victor Benjamin, Hsinchun Chen

Exploring Threats and Vulnerabilities in Hacker Web: Forums, IRC and Carding Shops ............. 85
Victor Benjamin, Weifeng Li, Thomas Holt, Hsinchun Chen

Analyzing the Social Media Footprint of Street Gangs .......................................................... 91
Sanjaya Wijeratne, Derek Doran, Amit Sheth, Jack L. Dustin

Deception is in the Eye of the Communicator: Investigating Pupil Diameter Variations in Automated Deception Detection Interviews ................................................................. 97
Jeffrey G. Proudfoot, Jeffrey L. Jenkins, Judee K. Burgoon, Jay F. Nunamaker Jr.

Security Infrastructure and Tools

Base Station Anonymity Distributed Self-Assessment in Wireless Sensor Networks .................. 103
Jon R. Ward, Mohamed Younis

On Construction of Signcryption Scheme for Smart Card Security ........................................ 109
Jayaprakash Kar, Daniyal M. Alghazzawi

Cybersecurity for Product Lifecycle Management – A Research Roadmap ............................. 114
Elisa Bertino, Nathan W. Hartman

A Privacy Protection Procedure for Large Scale Individual Level Data ........................................ 120
Julius Adebayo, Lalana Kagal

Honeypot based Unauthorized Data Access Detection in MapReduce Systems ......................... 126
Huseyin Ulusoy, Murat Kantarcioglu, Bhavani Thuraisingham, Latifur Khan

Part II: Short Papers
Data Science and Analytics in Security Informatics

Filtering Spam in Weibo Using Ensemble Imbalanced Classification and Knowledge Expansion ...... 132
Zhipeng Jin, Qiudan Li, Daniel Zeng, Lei Wang

Inferring Social Influence and Meme Interaction with Hawkes Processes ............................ 135
Chuan Luo, Xiaolong Zheng, Daniel Zeng

Multivariate Embedding based Causaltiy Detection with Short Time Series .......................... 138
Chuan Luo, Daniel Zeng

A Comparison of Features for Automatic Deception Detection in Synchronous Computer-Mediated Communication .......................................................... 141
Jinte Pak, Lina Zhou

Social Sensor Analytics: Making Sense of Network Models in Social Media .......................... 144
Chase P. Dowling, Joshua J. Harrison, Arun V. Sathanur, Landon H. Sego, Courtney D. Corley
Assessment of User Home Location Geoinference Methods ................................................................. 148
Joshua Harrison, Eric Bell, Court Corley, Chase Dowling, Andrew Cowell

Personality based Public Sentiment Classification in Microblog ......................................................... 151
Junjie Lin, Wenji Mao

Organizational, National, and International Issues in Counter-terrorism or Security Protection

The Relation between Microfinancing and Corruption by Country: An Analysis of an Open Source Dataset .......................................................................................................................... 154
Heather Roy, Sue Kase

Human Behavior in the Security Applications

Liar, Liar, IM on Fire: Deceptive Language-Action Cues in Spontaneous Online Communication .... 157
Shuyuan Mary Ho, Jeffrey T. Hancock, Cheryl Booth, Xiwen Liu, Shashanka S. Timmarajus, Mike Burmester

Modeling Emotion Entrainment of Online Users in Emergency Events .............................................. 160
Saike He, Xiaolong Zheng, Daniel Zeng, Bo Xu, Changliang Li, Guanhua Tian, Lei Wang, Hongwei Hao

Positive Bystanding Behavior in Cyberbullying: The Impact of Empathy on Adolescents’ Cyber Bullied Support Behavior .................................................................................................... 163
Samuel Owusu, Lina Zhou

Security Infrastructure and Tools

A Statistical Study of Covert Timing Channels Using Network Packet Frequency .................................. 166
Fangyue Chen, Yunke Wang, Heng Song, Xiangyang Li

A New Mobile Payment Protocol (GMPCP) By Using A New Key Agreement Protocol (GC) ............. 169
Mohammad Vahidalizadehdizaj, Lixin Tao

Multi-granular Aggregation of Network Flows for Security Analysis .................................................. 173
Tao Ding, Ahmed AlEroud, George Karabatis

Unintentional Bugs to Vulnerability Mapping in Android Applications .............................................. 176
Garima Bajwa, Mohamed Fazeen, Ram Dantu, Sonal Tanpure

Persistent Threat Pattern Discovery ........................................................................................................ 179
Faisal Quader, Vandana Janeja, Justin Stauffer

Random Anonymization of Mobile Sensor Data – Modified Android Framework .............................. 182
Cynthia L. Claiborne, Ram Dantu, Cathy Ncube

Change Detection in Evolving Computer Networks: Changes in Densification and Diameter Over Time .......................................................................................................................... 185
Josephine M. Namayanja, Vandana P. Janeja
Part III: Poster Papers
Data Science and Analytics in Security Informatics

Power-Function-Based Observation-Weighting Method for Mining Actionable Behavioral Rules ....... 188
Peng Su, Wenji Mao

Detection of Financial Statement Fraud - Is Accrual Really Useful as an Early Warning Indicator? .......................................................... 189
Naoto Oshiro

A Bottom-up Method for Constructing Topic Hierarchies .......................................................... 190
Yuhao Zhang, Wenji Mao, Xiaochen Li

Distributed LSI: Parallel Preprocessing and Vector Sharing .......................................................... 191
Roger B. Bradford

Research on Construction Methods of the Shanghai Cooperation Organization Meta-network Model .......................................................... 192
Kun Wang, Duoyong Sun

Security Infrastructure and Tools

Elliptic Curve Cryptography in Java .................................................................................................. 193
Leonidas Deligiannidis

An Opportunistic Encryption Extension for the DNS protocol .................................................. 194
Theogene Hakiza Bucuti, Ram Dantu

Pass-Pic: A Mobile User Authentication ...................................................................................... 195
Garima Bajwa, Ram Dantu, Ryan Aldridge

An Access Control Resistant to Shoulder-Surfing ..................................................................... 196
Jae-Jin Jang, Im Y. Jung

Online/Off-line Ring Signature Scheme with Provable Security .................................................. 197
Jayaprakash Kar
