Keynote 1

Big Data: Scale Down, Scale Up, Scale Out ................................................................. 3

Phillip B. Gibbons

Session 1: Graph and Social Analytics

Balanced Coloring for Parallel Computing Applications ...................................................... 7

Hao Lu, Mahantesh Halappanavar, Daniel Chavarria-Miranda,
Assefaw Gebremedhin, and Ananth Kalyanaraman

High-Performance Graph Analytics on Manycore Processors ............................................. 17

George M. Slota, Sivasankaran Rajamanickam, and Kamesh Madduri

Scalable Community Detection with the Louvain Algorithm ............................................. 28

Xinyu Que, Fabio Checconi, Fabrizio Petri, and John A. Gunnels

Cooperative Computing for Autonomous Data Centers .................................................... 38

Jonathan Berry, Michael Collins, Aaron Kearns, Cynthia A. Phillips, Jared Saia,
and Randy Smith
Session 2: Numerical Linear Algebra

Divide and Conquer Symmetric Tridiagonal Eigensolver for Multicore Architectures .................................................................51
    Grégoire Pichon, Azzam Haidar, Mathieu Faverge, and Jakub Kurzak

SPLATT: Efficient and Parallel Sparse Tensor-Matrix Multiplication .................................................................61
    Shaden Smith, Niranjan Ravindran, Nicholas D. Sidiropoulos, and George Karypis

A Sparse Direct Solver for Distributed Memory Xeon Phi-Accelerated Systems ......................................................71
    Piyush Sao, Xing Liu, Richard Vuduc, and Xiaoye Li

Malleable Sorting ........................................................................................................................................82
    Patrick Flick, Peter Sanders, and Jochen Speck

Session 3: High Performance Networks and Congestion Management

GASOLIN: Global Arbitration for Streams of Data in Optical Links .................................................................93
    Jiwei Liu, Jun Yang, and Rami Melhem

Contention-Based Nonminimal Adaptive Routing in High-Radix Networks ..................................................103
    Pablo Fuentes, Enrique Vallejo, Marina Garcia, Ramón Beivide, Germán Rodriguez, Cyriel Minkenberg, and Mateo Valero

Identifying the Culprits Behind Network Congestion .................................................................................113
    Abhinav Bhatele, Andrew R. Titus, Jayaraman J. Thiagarajan, Nikhil Jain, Todd Gamblin, Peer-Timo Bremer, Martin Schulz, and Laxmikant V. Kale

Embedding Nonblocking Multicast Virtual Networks in Fat-Tree Data Centers ........................................123
    Jun Duan, Zhiyang Guo, and Yuanyuan Yang

Session 4: Software for Heterogeneous Many-Core Systems

Cashmere: Heterogeneous Many-Core Computing .............................................................................135
    Pieter Hijma, Ceriel J.H. Jacobs, Rob V. van Nieuwpoort, and Henri E. Bal

A Scheduling and Runtime Framework for a Cluster of Heterogeneous Machines with Multiple Accelerators ........................................................................146
    Tarun Beri, Sorav Bansal, and Subodh Kumar

Hierarchical DAG Scheduling for Hybrid Distributed Systems .................................................156
    Wei Wu, Aurelien Bouteiller, George Bosilca, Mathieu Faverge, and Jack Dongarra

Pushing the Performance Envelope of Modular Exponentiation Across Multiple Generations of GPUs ........................................................................166
    Niall Emmart and Charles Weems
Session 5: Scheduling Algorithms

Federated Scheduling of Sporadic DAG Task Systems ................................................................. 179
Sanjoy Baruah

Addressing Fairness in SMT Multicores with a Progress-Aware Scheduler .................................... 187
Josué Feliu, Julio Sahuquillo, Salvador Petit, and José Duato

Fast and High Quality Topology-Aware Task Mapping ................................................................. 197
Mehmet Deveci, Kamer Kaya, Bora Uçar, and Ümit V. Çatalyürek

Workload-Driven VM Consolidation in Cloud Data Centers ......................................................... 207
Hao Lin, Xin Qi, Shuo Yang, and Samuel Midkiff

Session 6: Concurrency in Memory Systems

Update Consistency for Wait-Free Concurrent Objects .............................................................. 219
Matthieu Perrin, Achour Mostefaoui, and Claude Jard

Modeling Energy Consumption of Lock-Free Queue Implementations ........................................ 229
Aras Atalar, Anders Gidenstam, Paul Renaud-Goud, and Philippas Tsigas

A Consistency Framework for Iteration Operations in Concurrent Data Structures ................................ 239
Yiannis Nikolakopoulos, Anders Gidenstam, Marina Papatriantafilou, and Philippas Tsigas

An Automated Framework for Decomposing Memory Transactions to Exploit Partial Rollback ........ 249
Aditya Dhoke, Roberto Palmieri, and Binoy Ravindran

Session 7: MapReduce Advances

Cracking Down MapReduce Failure Amplification through Analytics Logging and Migration .................. 261
Yandong Wang, Huansong Fu, and Weikuan Yu

Grouping Blocks for MapReduce Co-Locality .............................................................................. 271
Xiao Yu and Bo Hong

SMapReduce: Optimising Resource Allocation by Managing Working Slots at Runtime .................. 281
Feng Liang and Francis C.M. Lau

High-Performance Design of YARN MapReduce on Modern HPC Clusters with Lustre and RDMA ................................................................. 291
Session 8: Performance and Energy Optimizations

High-Performance Energy-Efficient Recursive Dynamic Programming with Matrix-Multiplication-Like Flexible Kernels .......................................................... 303

Jesmin Jahan Tithi, Pramod Ganapathi, Aakrati Talati, Sonal Aggarwal, and Rezaul Chowdhury

Compiler-Directed Transformation for Higher-Order Stencils ................................................... 313

Protonu Basu, Mary Hall, Samuel Williams, Brian Van Straalen, Leonid Oliker, and Phillip Colella

LUC: Limiting the Unintended Consequences of Power Scaling on Parallel Transaction-Oriented Workloads .................................................................................. 324

Hung-Ching Chang, Bo Li, Godmar Back, Ali R. Butt, and Kirk W. Cameron

PowerFCT: Power Optimization of Data Center Network with Flow Completion Time Constraints ........................................................................................................ 334

Kuangyu Zheng, Xiaodong Wang, and Xiaorui Wang

Session 9: Dynamic Networks

Leader Election in Sparse Dynamic Networks with Churn ............................................................... 347

John Augustine, Tejas Kulkarni, and Sumathi Sivasubramaniam

Online Top-k-Position Monitoring of Distributed Data Streams ................................................... 357

Alexander Mäcker, Manuel Malatyali, and Friedhelm Meyer auf der Heide

DSLR: A Distributed Schedule Length Reduction Algorithm for WSNs ........................................ 365

Ashutosh Bhatia and R.C. Hansdah

Logarithmic-Time Complete Visibility for Robots with Lights ....................................................... 375

Ramachandran Vaidyanathan, Costas Busch, Jerry L. Trahan, Gokarna Sharma, and Suresh Rai

Session 10: Applications on GPUs

Indexing of Spatiotemporal Trajectories for Efficient Distance Threshold Similarity Searches on the GPU ................................................................................................. 387

Michael Gowanlock and Henri Casanova

Efficient Selection Algorithm for Fast k-NN Search on GPUs ...................................................... 397

Xiaoxin Tang, Zhiyi Huang, David Eyers, Steven Mills, and Minyi Guo

Optimizing Sparse Matrix Operations on GPUs Using Merge Path .............................................. 407

Steven Dalton, Sean Baxter, Duane Merrill, Luke Olson, and Michael Garland

Performance Engineering of the Kernel Polynomial Method on Large-Scale CPU-GPU Systems ...................................................................................................................... 417

Moritz Kreutzer, Andreas Pieper, Georg Hager, Gerhard Wellein, Andreas Alvermann, and Holger Fehske
Session 11: Scheduling on Clusters

A Batch System with Efficient Adaptive Scheduling for Malleable and Evolving Applications .................................................................429
  Suraj Prabhakaran, Marcel Neumann, Sebastian Rinke, Felix Wolf,
  Abhishek Gupta, and Laxmikant V. Kale

Improving Batch Scheduling on Blue Gene/Q by Relaxing 5D Torus Network Allocation Constraints .................................................................439
  Zhou Zhou, Xu Yang, Zhiling Lan, Paul Rich, Wei Tang, Vitali Morozov,
  and Narayan Desai

Quiet Neighborhoods: Key to Protect Job Performance Predictability .................................................................449
  Ana Jokanovic, Jose Carlos Sancho, German Rodriguez, Alejandro Lucero,
  Cyriel Minkenberg, and Jesus Labarta

Stratified Sampling for Even Workload Partitioning Applied to IDA* and Delaunay Algorithms .................................................................460
  Jeeva Paudel, Levi H. S. Lelis, and José Nelson Amaral

Session 12: Debugging and Verification

A Scalable Prescriptive Parallel Debugging Model .................................................................473
  Nicklas Bo Jensen, Niklas Quarfot Nielsen, Gregory L. Lee, Sven Karlsson,
  Matthew Legendre, Martin Schulz, and Dong H. Ahn

An Efficient Data-Dependence Profiler for Sequential and Parallel Programs .................................................................484
  Zhen Li, Ali Jannesari, and Felix Wolf

Decentralized Runtime Verification of LTL Specifications in Distributed Systems .................................................................494
  Menna Mostafa and Borzoo Bonakdarpour

Fast Proof Generation for Verifying Cloud Search .................................................................504
  Jingyu Zhou, Jiannong Cao, Bin Yao, and Minyi Guo

Keynote 2

Julia: A Fresh Approach to Parallel Programming .................................................................517
  Alan Edelman

Session 13: Randomized Algorithms

On the Influence of Graph Density on Randomized Gossiping .................................................................521
  Robert Elsässer and Dominik Kaaser

Distinct Random Sampling from a Distributed Stream .................................................................532
  Srikanta Tirthapura
Randomized Renaming in Shared Memory Systems ................................................................. 542
  Petra Berenbrink, André Brinkmann, Robert Elsässer, Tom Friedetzky, and Lars Nagel

Threshold Load Balancing with Weighted Tasks ........................................................................ 550
  Petra Berenbrink, Tom Friedetzky, Frederik Mallmann-Trenn, Sepehr Meshkinfamfard, and Chris Wastell

Session 14: Scientific Applications I

merAligner: A Fully Parallel Sequence Aligner .......................................................................... 561
  Evangelos Georganas, Aydin Buluç, Jarrod Chapman, Leonid Oliker, Daniel Rokhsar, and Katherine Yellick

An Algebraic Parallel Treecode in Arbitrary Dimensions .......................................................... 571
  William B. March, Bo Xiao, Chenhan D. Yu, and George Biros

3D Cartesian Transport Sweep for Massively Parallel Architectures
  with PaRSEC ......................................................................................................................... 581
  Salli Moustafa, Mathieu Faverge, Laurent Plagne, and Pierre Ramet

A Pattern Specification and Optimizations Framework for Accelerating
  Scientific Computations on Heterogeneous Clusters ............................................................ 591
  Linchuan Chen, Xin Huo, and Gagan Agrawal

Session 15: Storage Systems Architecture

D-Code: An Efficient RAID-6 Code to Optimize I/O Loads and Read
  Performance ......................................................................................................................... 603
  Yingxun Fu and Jiwu Shu

HAS: Heterogeneity-Aware Selective Data Layout Scheme for Parallel File
  Systems on Hybrid Servers .................................................................................................. 613
  Shuibing He, Xian-He Sun, and Adnan Haider

Opass: Analysis and Optimization of Parallel Data Access on Distributed File
  Systems ............................................................................................................................... 623
  Jiangling Yin, Jun Wang, Jian Zhou, Tyler Lukasiewicz, Dan Huang, and Junyao Zhang

Improving Storage Availability in Cloud-of-Clouds with Hybrid Redundant Data
  Distribution ......................................................................................................................... 633
  Bo Mao, Suzhen Wu, and Hong Jiang
Session 16: MPI and Charm++ Advances

Efficient Process Replication for MPI Applications: Sharing Work between Replicas .................................................................645

Thomas Ropars, Arnaud Lefray, Dohyun Kim, and André Schiper

Charm++ and MPI: Combining the Best of Both Worlds .................................................................655

Nikhil Jain, Abhinav Bhatle, Jae-Seung Yeom, Mark F. Adams,
Francesco Miniati, Chao Mei, and Laxmikant V. Kale

Casper: An Asynchronous Progress Model for MPI RMA on Many-Core Architectures ........................................................................665

Min Si, Antonio J. Peña, Jeff Hammond, Pavan Balaji, Masamichi Takagi,
and Yutaka Ishikawa

Scalable Asynchronous Contact Mechanics Using Charm++ ..........................................................677

Xiang Ni, Laxmikant V. Kale, and Rasmus Tamstorf

Session 17: Combinatorial Algorithms and Optimization

Association Rule Mining with the Micron Automata Processor ..........................................................689

Ke Wang, Yanjun Qi, Jeffrey J. Fox, Mircea R. Stan, and Kevin Skadron

Cichlid: Efficient Large Scale RDFS/OWL Reasoning with Spark ..................................................700

Rong Gu, Shanyong Wang, Fangfang Wang, Chunfeng Yuan, and Yihua Huang

Parallel Strategies for Solving Large Unit Commitment Problems in the California ISO Planning Model ........................................................................710

Guojing Cong, Carol Meyers, Deepak Rajan, and Tiziano Parriani

Session 18: Scientific Applications II

Exploring Shared-Memory Optimizations for an Unstructured Mesh CFD Application on Modern Parallel Systems ..........................................................723

Dheevatsa Mudigere, Srinivas Sridharan, Anand Deshpande, Jongsoo Park,
Alexander Heinecke, Mikhail Smelyanskiy, Bharat Kaul, Pradeep Dubey,
Dinesh Kaushik, and David Keyes

A Performance Analysis of SIMD Algorithms for Monte Carlo Simulations of Nuclear Reactor Cores ..........................................................733

David Ozog, Allen D. Malony, and Andrew R. Siegel

Generating Optimized Fourier Interpolation Routines for Density Functional Theory Using SPIRAL ..........................................................743

Doru Thom Popovici, Francis P. Russel, Karl Wilkinson, Chris-Kriton Skylaris,
Paul H. J. Kelly, and Franz Franchetti

Parallel Hessian Assembly for Seismic Waveform Inversion Using Global Updates ........................................................................753

Scott French, Yili Zheng, Barbara Romanowicz, and Katherine Yelick
**Session 19: Resilience**

Design for a Soft Error Resilient Dynamic Task-Based Runtime .................................................................................. 765
  Chongxiao Cao, Thomas Herault, George Bosilca, and Jack Dongarra

Recovering from Overload in Multicore Mixed-Criticality Systems ............................................................................... 775
  Jeremy P. Erickson, Namhoon Kim, and James H. Anderson

Investigating the Interplay between Energy Efficiency and Resilience in High Performance Computing .............................................................. 786
  Li Tan, Shuaiwen Leon Song, Panruo Wu, Zizhong Chen, Rong Ge, and Darren J. Kerbyson

**Session 20: Graph Analytics**

A Hybrid Approach to Processing Big Data Graphs on Memory-Restricted Systems .................................................................................. 799
  Harshvardhan, Brandon West, Adam Fidel, Nancy M. Amato, and Lawrence Rauchwerger

Distributed Programming over Time-Series Graphs ........................................................................................................ 809
  Yogesh Simmhan, Neel Choudhury, Charith Wickramaarachchi, Alok Kumbhare, Marc Frincu, Cauligi Raghavendra, and Viktor Prasanna

Efficient and Simplified Parallel Graph Processing over CPU and MIC ....................................................................................... 819
  Linchuan Chen, Xin Huo, Bin Ren, Surabhi Jain, and Gagan Agrawal

**Keynote 3**

Assisting H1N1 and Ebola Outbreak Response through High Performance Networked Epidemiology ................................................................. 831
  Madhav Marathe

**Best Papers Session**

Two-Level Main Memory Co-Design: Multi-threaded Algorithmic Primitives, Analysis, and Simulation ................................................. 835
  Michael A. Bender, Jonathan Berry, Simon D. Hammond, K. Scott Hemmert, Samuel McCauley, Branden Moore, Benjamin Moseley, Cynthia A. Phillips, David Resnick, and Arun Rodrigues

CA-SVM: Communication-Avoiding Support Vector Machines on Distributed Systems ........................................................................... 847
  Yang You, James Demmel, Kenneth Czechowski, Le Song, and Richard Vuduc

Filtering, Reductions and Synchronization in the Anton 2 Network ......................................................................................... 860
  J.P. Grossman, Brian Towles, Brian Greskamp, and David E. Shaw
Notified Access: Extending Remote Memory Access Programming Models
for Producer-Consumer Synchronization ................................................................. 871
Roberto Belli and Torsten Hoeffer

Session 21: Algorithms for Fault Tolerance
2W-FD: A Failure Detector Algorithm with QoS ................................................. 885
Alejandro Tomsic, Pierre Sens, João Garcia, Luciana Arantes, and Julien Sopena
Stabilizing Byzantine-Fault Tolerant Storage ..................................................... 894
Silvia Bonomi, Maria Potop-Butucaru, and Sébastien Tixeuil
Making BFT Protocols Really Adaptive ............................................................ 904
Jean-Paul Bahsoun, Rachid Guerraoui, and Ali Shoker
Exploration of Lossy Compression for Application-Level Checkpoint/Restart ....... 914
Naoto Sasaki, Kento Sato, Toshio Endo, and Satoshi Matsuoka

Session 22: Scheduling and Load Balancing
Load-Balanced Local Time Stepping for Large-Scale Wave Propagation .............. 925
Max Rietmann, Daniel Peter, Olaf Schenk, Bora Uçar, and Marcus Grote
Towards Balance-Affinity Tradeoff in Concurrent Subgraph Traversals ............... 936
Yinglong Xia, Lifeng Nai, and Jui-Hsin Lai
Controlled Contention: Balancing Contention and Reservation in Multicore Application Scheduling ................................................................. 946
Jingjing Wang, Nael Abu-Ghazaleh, and Dmitry Ponomarev
Resource and Deadline-Aware Job Scheduling in Dynamic Hadoop Clusters ....... 956
Dazhao Cheng, Jia Rao, Changjun Jiang, and Xiaobo Zhou

Session 23: Heterogeneous Systems
Mitigating the Susceptibility of GPGPUs Register File to Process Variations ......... 969
Jingwei Jia Tan and Xin Fu
PRO: Progress Aware GPU Warp Scheduling Algorithm ................................... 979
Jayvant Anantpur and R. Govindarajan
Performance Impact of Batching Web-Application Requests Using Hot-Spot Processing on GPUs ................................................................. 989
Tobias Fjälling and Per Stenström
An Approach for Energy Efficient Execution of Hybrid Parallel Programs .......... 1000
Lavanya Ramapantulu, Dumitrel Loghin, and Yong Meng Teo
Session 24: I/O Optimizations

Scheduling the I/O of HPC Applications Under Congestion .................................................................1013
Ana Gainaru, Guillaume Aupy, Anne Benoit, Franck Cappello, Yves Robert, and Marc Snir

Leveraging Naturally Distributed Data Redundancy to Reduce Collective I/O Replication Overhead ...........................................................................................................................................................................1023
Bogdan Nicolae

Exploring Data Staging Across Deep Memory Hierarchies for Coupled Data Intensive Simulation Workflows ..........................................................................................................................................................................................................................1033
Tong Jin, Fan Zhang, Qian Sun, Hoang Bui, Melissa Romanus, Norbert Podhorszki, Scott Klasky, Hemanth Kolla, Jacqueline Chen, Robert Hager, Choong-Seock Chang, and Manish Parashar

Reducing Vector I/O for Faster GPU Sparse Matrix-Vector Multiplication .........................................................1043
Pham Nguyen Quang Anh, Rui Fan, and Yonggang Wen

Session 25: Graph Algorithms

Parallel Graph Partitioning for Complex Networks .................................................................................................1055
Henning Meyerhenke, Peter Sanders, and Christian Schulz

A Self-Stabilizing Memory Efficient Algorithm for the Minimum Diameter Spanning Tree under an Omnipotent Daemon ..............................................................................................................................................1065
Lélia Blin, Fadwa Boubekeur, and Swan Dubois

A Parallel Tree Grafting Algorithm for Maximum Cardinality Matching in Bipartite Graphs ..................................................................................................................................................................................................................1075
Ariful Azad, Aydin Buluç, and Alex Pothen

Session 26: Resource Management

Fair Resource Allocation for Heterogeneous Tasks .........................................................................................................1087
Koyel Mukherjee, Partha Dutta, Gurulingesh Darai, Thangaraj Rajasubramaniam, Koustuv Dasgupta, and Atul Singh

Resources-Conscious Asynchronous High-Speed Data Transfer in Multicore Systems: Design, Optimizations, and Evaluation ...........................................................................................................................................................................1097
Tan Li, Yufei Ren, Dantong Yu, and Shudong Jin

RISC: Robust Infrastructure over Shared Computing Resources through Dynamic Pricing and Incentivization ...........................................................................................................................................................................................................1107
Tridib Mukherjee, Partha Dutta, Vinay G. Hegde, and Sujit Gujar
Session 27: Architectural Support for Runtime and Thermal Management
A Dual-Consistency Cache Coherence Protocol .................................................................1119
  Alberto Ros and Alexandra Jimborean
Nexus#: A Distributed Hardware Task Manager for Task-Based Programming Models ..................................................................................................................1129
  Tamer Dallou, Nina Engelhardt, Ahmed Elhossini, and Ben Juurlink
Minimizing Thermal Variation Across System Components ........................................1139
  Kaicheng Zhang, Seda Ogrenci-Memik, Gokhan Memik, Kazutomo Yoshii,
  Rajesh Sankaran, and Pete Beckman

Session 28: Performance Monitoring and Prediction
PCERE: Fine-Grained Parallel Benchmark Decomposition for Scalability Prediction ...........................................................................................................................................1151
  Mihail Popov, Chadi Akel, Florent Conti, William Jalby,
  and Pablo de Oliveira Castro
Matching Application Signatures for Performance Predictions Using a Single Execution ...............................................................................................................................................1161
  Anirudh Jayakumar, Prakash Murali, and Sathish Vadhiyar
Monitoring Large-Scale Location-Based Information Systems ..................................1171
  Hammad Khan, Julien Gascon-Samson, Jörg Kienzle, and Bettina Kemme

Additional Paper:
Locality Aware DAG-Scheduling for LU-Decomposition ............................................1182
  Tobias Maier, Peter Sanders, and Jochen Speck

Author Index
