2015 10th IEEE International Symposium on Industrial Embedded Systems

(SIES 2015)

Siegen, Germany
8-10 June 2015
Table of Contents

Session 1 Automotive Systems
ReSA: Ontology-based Requirement Specification Language Tailored to Automotive Systems 1
*Nesredin Mahmud, Cristina Seceleanu and Oscar Ljungkrantz*

Efficient Compositing Strategies for Automotive HMI Systems 11
*Simon Gansel, Stephan Schnitzer, Riccardo Cecolin, Frank Dürr, Kurt Rothermel and Christian Maihöfer*

TTEthernet SW-based End System for AUTOSAR 21
*Thomas Frühwirth, Wilfried Steiner and Bernhard Stangl*

Session 2 Architectures and architecture analysis
Real-Time DRAM Throughput Guarantees for Latency Sensitive Mixed QoS MPSoCs 29
*Leonardo Ecco, Selma Saidi, Adam Kostrzewa and Rolf Ernst*

WCET Analysis Methods: Pitfalls and Challenges on their Trustworthiness 39
*Jaume Abella, Carles Hernandez, Eduardo Quiñones, Francisco J Cazorla, Philippa Ryan Conmy, Mikel Azkarate-Askasua, Jon Perez, Enrico Mezzetti and Tullio Vardanega*

Periodic Thermal Management for Hard Real-time Systems 49
*Long Cheng, Kai Huang, Gang Chen, Biao Hu and Alois Knoll*

Wormhole networks properties and their use for optimizing worst case delay analysis of many-cores 59
*Laure Abdallah, Mathieu Jan, Jérôme Ermont and Christian Fraboul*

Session 3 Networked embedded systems
Analysis of access control policies in networked embedded systems: a case study 69
*Manuel Cheminod, Luca Durante, Lucia Seno and Adriano Valenzano*

A New Profibus-DP Intelligent Slave Interface for CERN’s Sputter Ion Pump Controllers 79
*Marco Roda, Luís Mendes, Paulo Gomes, Gregory Pigny and Sérgio Faria*

Real-time Network Traffic Handling in FASA 88
*Raphael Eidenbenz, Thanikesavan Sivanthi, Aurelien Monot and Jun Liu*

Stochastic Delay Analysis of a Wireless Safety-Critical Avionics Network 98
*Dinh Khanh Dang and Ahlem Mifdaoui*
Session 4 Time-triggered systems and Cyclic executives

Time-Triggered Communication Scheduling Analysis for Real-Time Multicore Systems
Matthias Freier and Jian-Jia Chen

Supporting Firm Real-Time Traffic in Fault-Tolerant Real-Time Systems based on Cyclic Scheduling - The WICKPro Protocol
Jesus Aisa and Jose Luis Villarroel

Building an Interactive Test Development Environment for Cyclic Executive Systems
Guillaume Langelier, Arnaud Dury, Alexandre Petrenko, S Ramesh and Tameem Assaf

Session 5 WIP session

Monitoring of I/O for Safety-Critical Systems Using PCI Express Advanced Error Reporting
Daniel Muench, Michael Paulitsch and Andreas Herkersdorf

Energy- and Latency-Aware Simulation of Battery-Operated Wireless Embedded Networks for Home Automation
Daniel Pfefferkorn, Hartwig Jeschke and Holger Blume

Fail-Operational in Safety-Related Automotive Multicore Systems
Andre Kohn, Michael Käßmeyer, Rolf Schneider, Andre Roger, Claus Stellwag and Andreas Herkersdorf

A Framework Architecture for Student Learning in Distributed Embedded Systems
William Honig, Konstantin Laufer and George Thiruvathukal

Virtual prototyping of heterogeneous dynamic platforms using Open Virtual Platforms
Leonard Masing, Stephan Werner and Juergen Becker

Optimal SAT-based Scheduler for Time-Triggered Networks-on-a-Chip
Christian Schöler, Ayman Murshed, Rene Krenz-Baath and Roman Obermaisser

SMT-based Synthesis of TTEthernet Schedules: a Performance Study
Francisco Pozo, Guillermo Rodriguez-Navas, Hans Hansson and Wilfried Steiner

A Model-Based Workflow from Specification Until Validation of Timing Requirements in Embedded Software Systems
Arne Noyer, Padma Iyenghar, Joachim Engelhardt, Florian Pramme, Elke Pulvermueller and Gert Bikker

Protecting FPGA-based Automotive Systems against Soft Errors through Reduced Precision Redundancy
Walter Stechele

Semi-online Power Estimation for Smartphone Hardware Components
Ekarat Rattagan, Edward T.-H. Chu, Ying-Dar Lin and Yuan-Cheng Lai
Session 6 Resource Management and Real-Time Scheduling

Deriving Period Restrictions from a Given Utilization Bound under RMS
Dirk Müller and Alan Burns

From Modes to Patterns: pattern-based resource management in time-critical applications
Rudolf Mak, Ionut David and Johan Lukkien

Resource Sharing Under Global Scheduling with Partial Processor Bandwidth
Sara Afshar, Moris Behnam, Reinder J. Bril and Thomas Nolte

Session 7 Operating Systems, Virtualization and Hypervisors

Extended Support for Limited Preemption Fixed Priority Scheduling for OSEK/AUTOSAR-Compliant Operating Systems
Matthias Becker, Nima Khalilzad, Reinder J. Bril and Thomas Nolte

Integrating Linux and the real-time ERIKA OS through the Xen hypervisor
Arianna Avanzini, Dario Faggioli, Paolo Gai and Paolo Valente

Mapping CAN-to-Ethernet Communication Channels within Virtualized Embedded Environments
Dominik Reinhardt, Maximilian Güntner, Markus Kucera, Thomas Waas and Winfried Kühnhauser

Session 8 Analysis and Synthesis by Formal Methods

Model Checking of Finite-state Machine-based Scenario-aware Dataflow Using Timed Automata
Mladen Skelin, Erik Ramsgaard Wognsen, Mads Chr. Olesen, René Rydhof Hansen and Kim Guldstrand Larsen

Using BIP to reinforce correctness of resource-constrained IoT applications
Alexios Lekidis, Emmanouela Stachtiari, Panagiotis Katsaros, Marius Bozga and Christos Georgiadis

A Formal, Model-driven Design Flow for System Simulation and Multi-core Implementation
Papa Issa Diallo, Seyed-Hosein Attarzadeh-Niaki, Francesco Robino, Ingo Sander, Joel Champeau and Johnny Oberg

A formal approach for the synthesis and implementation of fault-tolerant industrial embedded systems
Wei-Tsun Sun, Alain Girault and Gwenaël Delaval
