2015 30th Annual ACM/IEEE Symposium on Logic in Computer Science

(LICS 2015)

Kyoto, Japan
6-10 July 2015
Table of Contents

Invited Talks
Higher-Order Model Checking: An Overview ................................................................. 1
  Luke Ong
Privacy and the Price of Data ....................................................................................... 16
  Daniel Kifer
From Categorical Logic to Facebook Engineering ..................................................... 17
  Peter O’Hearn

Invited Tutorials
Names and Symmetry in Computer Science (Invited Tutorial) ................................. 21
  Andrew M. Pitts
Recent Developments in Quantitative Information Flow (Invited Tutorial) .......... 23
  Geoffrey Smith

Session 1: Petri Nets
Reachability in Two-Dimensional Vector Addition Systems with States Is
PSPACE-Complete ........................................................................................................ 32
  Michael Blondin, Alain Finkel, Stefan Göller, Christoph Haase, and Pierre McKenzie
Long-Run Average Behaviour of Probabilistic Vector Addition Systems ............... 44
  Tomáš Brázdil, Stefan Kiefer, Antonín Kucera, and Petr Novotný
<table>
<thead>
<tr>
<th>Title</th>

<tbody>
<tr>
<td>Demystifying Reachability in Vector Addition Systems</td>
<td>56</td>
</tr>
<tr>
<td>Jérôme Leroux and Sylvain Schmitz</td>
<td></td>
</tr>
<tr>
<td>Petri Automata for Kleene Allegories</td>
<td>68</td>
</tr>
<tr>
<td>Paul Brunet and Damien Pous</td>
<td></td>
</tr>
<tr>
<td>Complexity Bounds for Sum-Product Logic via Additive Proof Nets and Petri Nets</td>
<td>80</td>
</tr>
<tr>
<td>Willem Heijltjes and Dominic J.D. Hughes</td>
<td></td>
</tr>
<tr>
<td><strong>Session 2: Foundations of Programming Languages</strong></td>
<td></td>
</tr>
<tr>
<td>A Cubical Approach to Synthetic Homotopy Theory</td>
<td>92</td>
</tr>
<tr>
<td>Daniel R. Licata and Guillaume Brunerie</td>
<td></td>
</tr>
<tr>
<td>Game Semantics for Type Soundness</td>
<td>104</td>
</tr>
<tr>
<td>Tim Disney and Cormac Flanagan</td>
<td></td>
</tr>
<tr>
<td>Programs for Cheap!</td>
<td>115</td>
</tr>
<tr>
<td>Jennifer Hackett and Graham Hutton</td>
<td></td>
</tr>
<tr>
<td>Polarised Intermediate Representation of Lambda Calculus with Sums</td>
<td>127</td>
</tr>
<tr>
<td>Guillaume Munch-Maccagnoni and Gabriel Scherer</td>
<td></td>
</tr>
<tr>
<td>On the Relative Usefulness of Fireballs</td>
<td>141</td>
</tr>
<tr>
<td>Beniamino Accattoli and Claudio Sacerdoti Coen</td>
<td></td>
</tr>
<tr>
<td><strong>Session 3: Bisimilarity</strong></td>
<td></td>
</tr>
<tr>
<td>Bisimilarity in Fresh-Register Automata</td>
<td>156</td>
</tr>
<tr>
<td>Andrzej S. Murawski, Steven J. Ramsay, and Nikos Tzevelekos</td>
<td></td>
</tr>
<tr>
<td>Branching Bisimilarity of Normed BPA Processes Is in NEXPTIME</td>
<td>168</td>
</tr>
<tr>
<td>Wojciech Czerwiński and Petr Jancar</td>
<td></td>
</tr>
<tr>
<td>Branching Bisimilarity on Normed BPA Is EXPTIME-Complete</td>
<td>180</td>
</tr>

</table>
Session 5: Game Graphs and Game Semantics

Nondeterminism in Game Semantics via Sheaves .................................................................220
   Takeshi Tsukada and C.H. Luke Ong

The Parallel Intensionally Fully Abstract Games Model of PCF ........................................232
   Simon Castellan, Pierre Clairambault, and Glynn Winskel

Unifying Two Views on Multiple Mean-Payoff Objectives in Markov Decision Processes .................................................................244
   Krishnendu Chatterjee, Zuzana Komárková, and Jan Kretínský

Multidimensional beyond Worst-Case and Almost-Sure Problems for Mean-Payoff Objectives ......................................................................................................................257
   Lorenzo Clemente and Jean-François Raskin

Improved Algorithms for One-Pair and k-Pair Streett Objectives ........................................269
   Krishnendu Chatterjee, Monika Henzinger, and Veronika Loitzenbauer

Session 6: Databases

The Hunt for a Red Spider: Conjunctive Query Determinacy Is Undecidable ..........................281
   Tomasz Gogacz and Jerzy Marcinkowski

The Complexity of Boundedness for Guarded Logics .................................................................293
   Michael Benedikt, Balder Ten Cate, Thomas Colcombet,
   and Michael Vanden Boom

Finite Open-World Query Answering with Number Restrictions .............................................305
   Antoine Amarilli and Michael Benedikt

Tree-like Queries in OWL 2 QL: Succinctness and Complexity Results .................................317
   Meghyn Bienvenu, Stanislav Kikot, and Vladimir Podolskii

Path Logics for Querying Graphs: Combining Expressiveness and Efficiency ..........................329
   Diego Figueira and Leonid Libkin

Session 7: Modal and Second-Order Logic

PDL Is the Bisimulation-Invariant Fragment of Weak Chain Logic ........................................341
   Facundo Carreño

Monadic Second-Order Logic and Bisimulation Invariance for Coalgebras ............................353
   Sebastian Enqvist, Fatemeh Seifan, and Yde Venema

Defining Winning Strategies in Fixed-Point Logic .................................................................366
   Felix Canavoi, Erich Grädel, Simon Leßenich, and Wied Pakusa

Interpolation with Decidable Fixpoint Logics ........................................................................378
   Michael Benedikt, Balder Ten Cate, and Michael Vanden Boom
A Complete Axiomatization of MSO on Infinite Trees ......................................................390
Anupam Das and Colin Riba

Session 8: Category Theory and Domains
A Fibrational Account of Local States ...........................................................................402
Kenji Maillard and Paul-André Melliès
Varieties of Languages in a Category ..............................................................................414
Jirí Adámek, Robert S.R. Myers, Henning Urbat, and Stefan Milius
Extensions of Domain Maps in Differential and Integral Calculus ................................426
Abbas Edalat
Descriptive Set Theory in the Category of Represented Spaces ......................................438
Arno Pauly and Matthew De Brecht
Domains of Commutative C-Subalgebras .......................................................................450
Chris Heunen and Bert Lindenhovius

Session 9: Constraints, Unification, and Knowledge Representation
From Complexity to Algebra and Back: Digraph Classes, Collapsibility, and the PGP .................................................................462
Catarina Carvalho, Florent Madelaine, and Barnaby Martin
Locally Finite Constraint Satisfaction Problems ............................................................475
Bartek Klin, Eryk Kopczynski, Joanna Ochremiak, and Szymon Torunczyk
Descriptive Complexity of List H-Coloring Problems in Logspace: A Refined Dichotomy ........................................................................487
Victor Dalmau, László Egri, Pavol Hell, Benoît Larose, and Arash Rafiey
One Context Unification Problems Solvable in Polynomial Time ..................................499
Adrià Gascón, Ashish Tiwari, and Manfred Schmidt Schaus
Extending ALCQIO with Trees .....................................................................................511
Tomer Kotek, Mantas Šimkus, Helmut Veith, and Florian Zuleger

Session 10: Computability and Proofs
Feedback Turing Computability, and Turing Computability as Feedback .....................523
Nathanael L. Ackerman, Cameron E. Freer, and Robert S. Lubarsky
Regularity Preserving but Not Reflecting Encodings ....................................................535
Jörg Endrullis, Clemens Grabmayer, and Dimitri Hendriks
Hyper Natural Deduction ...............................................................................................547
Arnold Beckmann and Norbert Preining
Parallelism and Synchronization in an Infinitary Context ................................................................. 559
  Ugo Dal Lago, Claudia Faggian, Benoît Valiron, and Akira Yoshimizu

A Diagrammatic Axiomatisation for Qubit Entanglement ................................................................. 573
  Amar Hadzihasanovic

Session 11: Randomization and Probabilities

A Unifying Approach to the Gamma Question ................................................................................... 585
  Benoît Monin and André Nies

  Annabelle McIver, Carroll Morgan, and Tahiry Rabehaja

How Good Is a Strategy in a Game with Nature? .............................................................................. 609
  Arnaud Carayol and Olivier Serre

Entailment among Probabilistic Implications .................................................................................... 621
  Albert Atserias and José L. Balcázar

Metric Reasoning about $\lambda$-Terms: The Affine Case ................................................................. 633
  Raphaëlle Crubillé and Ugo Dal Lago

Session 12: Complexity

On the Complexity of Temporal Equilibrium Logic ......................................................................... 645
  Laura Bozzelli and David Pearce

A Note on the Complexity of Classical and Intuitionistic Proofs ...................................................... 657
  Matthias Baaz, Alexander Leitsch, and Giselle Reis

On the Complexity of Linear Arithmetic with Divisibility .............................................................. 667
  Antonia Lechner, Joël Ouaknine, and James Worrell

Characterising Choiceless Polynomial Time with First-Order Interpretations .................................. 677
  Erich Grädel, Wied Pakusa, Svenja Schalthöfer, and Lukasz Kaiser

Universal Covers, Color Refinement, and Two-Variable Counting Logic: Lower Bounds for the Depth.................................................................................................................. 689
  Andreas Krebs and Oleg Verbitsky

Session 13: Automata

A Canonical Form for Weighted Automata and Applications to Approximate Minimization ............... 701
  Borja Balle, Prakash Panangaden, and Doina Precup

Automata-Based Abstraction Refinement for $\mu$HORS Model Checking ......................................... 713
  Naoki Kobayashi and Xin Li
Nested Weighted Automata ................................................................. 725
  Krishnendu Chatterjee, Thomas A. Henzinger, and Jan Otop

Timed Pushdown Automata Revisited .............................................. 738
  Lorenzo Clemente and Slawomir Lasota

The Target Discounted-Sum Problem ............................................ 750
  Udi Boker, Thomas A. Henzinger, and Jan Otop

Author Index .................................................................................. 762
