# TABLE OF CONTENTS

## VOLUME 1

3D Modeling of Sand Production in Waterflooding by Coupled Flow/Geomechanical Numerical Solutions ................................................. 1

Nasir, Mohammad; Walters, Dale; Yale, David; Chivvis, Robert; Turak, Joseph

A Calibrated Synthetic Rock Mass (SRM) Model for Simulating Crack Growth in Granitic Rock Considering Grain Scale Heterogeneity of Polycrystalline Rock ............................................................... 9

Farahmand, Kurash; Diederichs, Mark Stephen

A Case Study for Wellpath Optimization and Drilling Risk Reduction for Vaca Muerta Shale in Argentina .............................................. 23

Kosset, Talgar; Tutuncu, Azra

A Combined Experimental (Micro-CT) Numerical (FDEM) Methodology to Study Rock Joint Asperities Subjected to Direct Shear ............................................................................................................ 38

Tatone, Bryan; Grasselli, Giovanni

A Comparison of Stress Evolution in Single-Layer and Multilayer Buckle Folds .................................................................................. 48

Liu, Xiaolong; Eckert, Andreas; Connelly, Peter

A Creep Constitutive Model Considering Geometric Damage of Fractured Rock Mass and Its Application .............................................. 63

Li, Yong; Zhou, Han; Zhu, Weichen; Li, Shucan; Liu, Teng

A Finite Element Geomechanical Study of the Brittle Failure of a Caprock Due to Deflation .................................................................... 70

Defosse, Thibault; Zimmerman, Robert W.; Salimzadeh, Saeed; Paluszny, Adriana

A Joint Asperity Degradation Model Based on the Wear Process.............................................................................................................. 80

Li, Yinchun; Ho, Joung; Mitra, Rudrajit; Hebbelwhite, Bruce

A New Method for Assessment of Rock Drillability Based on Indentation Tests ................................................................................... 88

Deng, Yong; Chen, Mian; Jin, Yan; Lu, Yunhu; Zou, Daixiu; Shan, Qingliu; Jiang, Haolong

A Numerical Study of the Parameters That Affect the Induced Principal Stresses by Hydraulic Fracturing in a Shale Formation ................ 94

Akbarzadeh, Tasser; Miller, Hugh

A Practical Log-Based Approach for Assessing and Preventing Wellbore Instability Considering Both Mechanical and Shale Swelling Effects ........................................................................................................ 99

Likram, Fatmir; Diaz, Arturo

A Simplified Analysis of Stresses in Rising Salt Domes and Adjacent Sediments .................................................................................... 106

Heidari, Mahdi; Nikoloudov, Maria; Flemings, Peter; Hudes, Michael

Analysis and Design of Pillars for Cave Mining - A Comparative Assessment of Empirical Methods ................................................................. 113

Villalobos, Sergio

Analysis of Stimulated Volume Resulting from Fluid Injection Into a Fracture Rock Mass ....................................................................... 119

Verde, Alexander

Analysis of Stress Variations with Depth in the Permian Basin Spraberry/Dean/Wolfcamp Shale ................................................................ 126

Xu, Shaohuan; Zoback, Mark

Analytical Model of Accelerating Gas Flow-Induced Conductivity Damage in Propped Hydraulic Fractures ............................................. 133

Jiang, Haolong; Chen, Mian; Jin, Yan; Xu, Yongjun; Zhou, Yu; Du, Xiaoyu; Sun, Zhifan

Anisotropic Seismic Velocities Around Salt Structures Via Stress Modelling ......................................................................................... 138

Rodriguez-Herrera, Adrián; Koottavelooulos, Nick; Zdraleva, Olga

A New Optical Fiber Sensor for Reading RGB Intensities of Light Returning from an Observation Point in Geomaterials ......................... 143

Akutagawa, Shinichi; Machijima, Yuichi

Application of Analytical Probabilistic Method to Estimate Minimum Horizontal in Situ Stress Froma Leak-Off Test (LOT) Acquired in a High Inclined Well in a Deepwater Turbidites Oil Field, Offshore Brasil ................................................................. 150

Galarraga, Miguel

Application of Programmatic Gridding Technique to Advanced Reservoir Geomechanics Modeling ........................................................... 157

Li, H.; Zheng, L.-N.; Lee, S.; Chalaturnyk, R.

Assessment of Stress Changes in Hydrocarbon Reservoirs Using Analytical Methods ....................................................................... 164

Quispe, Roberto; Firme, Pedro; Roehl, Deane; Parotidis, Mitsiades; Dominguez, Ana; Paulio, Luis

Behavior of Salt from the Bayou Choctaw Salt Dome ................................................................................................................................. 170

Ingraham, Mathew; Brouse, Scott; Bauer, Stephen; Barrett, Perry; Flint, Gregory

Biological Influences in the Subsurface: A Method to Seal Fractures and Reduce Permeability with Microbially-Induced Calcite Precipitation ..................................................................................................... 178

Phillips, Adrienne; Gerlach, Robin; Hibbert, Randy; Kirksey, Jim; Spangler, Lee; Esposito, Richard; Cunningham, Al

Brittleness Determination of Rock Using Rock Physics Techniques Calibrated with Macro Damage ................................................................. 184

Geng, Zhi; Chen, Mian; Jin, Yan; Du, Xiaoyu; Yang, Shuai; Li, DanDan; Fang, Xin

Caprock Safety Factor Assessment of SAGD Projects ................................................................................................................................. 193

Xiong, Jun; Chalaturnyk, Richard J.;

Capturing Early Evolution of Salt Openings ................................................................................................................................................ 201

Hansen, Frank; Howard, Cliff; Kahlman, Kris; Holland, John

Case Study: Understanding the Mechanics Behind the Rockmass Deformation Observed in an Extraction Drive at New Gold's New Afton Mine Block Cave Operation ................................................................ 209

Davies, Andy
Comparison of Injection-Induced Fault Reactivation and Seismicity in CO₂ Sequestration and Shale-Gas Fracturing.................................................................................................................................216
Bartosik, Jenny; Rinaldi, Antonio Piu; Cuppa, Frederic
Contribution of Shear Slip in a Widespread Compressive Pillar Failure .............................................................................................................................226
Pooch, Eric; Garvey, Ryan; Zhang, Kun; Ozbay, Ugur
Coupled Numerical Simulation of Formation Rock and Cement Sheath Effect on Vertical Cased Well Fracturing ..................................................234
Du, Xiaoyu; Jin, Yan; Lu, Yuntao; Geng, Zhi; Zhang, Yayan; Chen, Min; Yang, Henglin; Jiang, Hailong
Crack Band Approach to Model 3D Hydraulic Fracturing of Gas Shale Stratum ........................................................................................................240
Chau, Viet; Bazant, Zdenek; Su, Y.; Salvatier, M.
Design and Construction of a Deep Excavation in Extremely Poor Rock Mass ........................................................................................................247
Richards, Donald; Castelli, Raymond; Clark, Gordon
Development of a Geoepidynamic Model for Hydraulic Fracture .................................................................................................................................256
Edmiston, John
Development of Soil-Water Coupled NMM-DDA .................................................................................................................................................................265
Hashimoto, Ryota; Koyama, Tomofumi; Kikimoto, Marnoru
Effect of Fracture Heterogeneities on Reactive Flow ..............................................................................................................................................272
Elkhoury, Joan E.; Iyer, Jaieree
Evaluation of Conditions of Rock Bolts Affected by Corrosion Using Pulse Echo and Acoustic Emission Methods .......................................................279
Medina, Balieh Ishak; Kodjo, Apeolvi Serg; Saleh, Kaveh; Rivard, Patrice; Quirion, Marco
Experimental Assessment of the Influences of Temperature on Geomechanical Characteristics of a Carbonate Reservoir... ........................................286
Memarian, Hossein; Mehrjian, Behzad; Es’haghif, Hassan; Dusseauil, Maurice B.; Niknejad, Maryam; Hassanzade, Maryam; Gharibel, Ali
Experimental Investigation on the Effect of Pore Pressure on Rock Permeability-Bakken Formation Case ..................................................................295
He, Jun; Ling, Kegang; Pei, Peng; Ni, Xiao
Experimental Study on Loading-Unloading Failure Process of Marble in Jinping II Hydropower Station, China .................................................................302
Pan, Peng-Zhi; Ji, Wei-Wei; Feng, Xia-Ting
Exploring Conceptual Models of Hydraulic Fracture Network Growth ..........................................................................................................................308
Senthilnathan, Sid; McClure, Mark W.
Field and Experimental Brittleness (Toughness) Determination of Vaca Muerta Shale. ................................................................................................319
Chavez, Ariel Alejandro; Oegus, Jose Luis; Morris, Walter; Sanchez, Martin; Bianchi, Gustavo L.
Finite Element Analysis of Casing-In-Casing Integrity Due to Annulus Pressurization by Means of Salt Creep ........................................................................326
Melo, Daniel; Fontoura, Sergio; Inoue, Nelson; Anjos, Jorel
Flow of High Solid Volume Fraction Fluids Through Fractures and Around Obstruction ..................................................................................................334
Medina, Ricardo; Detwiler, Russell; Pratul, Romain; Morris, Joseph; Desroches, Jean; Ortega, Alberto
Fracture-Aperture Alteration Induced by Calcite Precipitation .............................................................................................................................................341
Jones, Trevor; Detwiler, Russell
Geomechanical Modeling in CO₂ Enhanced Oil Recovery ........................................................................................................................................349
Jabbari, Hadi; Ostadhasan, Mehdi; Salehi, S.
Geo-Mechanical Model Test for Global Stability of High Arch Dam and Its Engineering Applications ........................................................................357
Chen, Yuan; Zhang, Lin; Yang, B. Q.; Dong, J. H.; Chen, J. Y.
Global Sensitivity Analysis of Geomechanical Fractured Reservoir Parameters ........................................................................................................366
Verde, Alexander
Ground Subsidence Model for a Panel Caving Exploitation at El Teniente Mine - CODELCO CHILE .................................................................................372
Esquinza, Alejandro; Manso, G. A.
Helium-Mass-Spectrometry-Permeameter for the Measurement of Permeability of Low Permeability Rock with Application to Triaxial Deformation Conditions ........................................................................................................379
Baner, Stephen; Lee, Moo; Gardner, W. Payton
Horizontal Stress Modeling of Successively Built-Up Formations: The Effect of Viscous Relaxation and Depth-Dependent Hardening ........................................................................................................................................386
Hoink, Tobias; van der Zee, Wolter; Moss, Daniel
Impact of Compression on Petrophysical and Mechanical Properties of Wellbore Cement Containing Salt ........................................................................393
Ozobo, Arome; Radujic, Mileva
In Situ Stress Measurements During Well Abandonment ...........................................................................................................................................400
Chan, Alvin; Ekbote, S.; Hows, M. P.; Wong, G. K.
Induced Microseismic Monitoring in Salt Caverns.........................................................................................................................................................407
Hosseini, Zara; Collins, David; Pinnock, Ian; Shumila, Vladimir; Trifu, Cezar
Induced Rockbursts and Inherent Rockbursts.................................................................................................................................................................416
Deng, Jian
Influence of Microcrack Parameters on Splitting Failure of an Opening Under High Stress .............................................................................................422
Nie, Tao; Pu, Hai; Wang, Liang; Lu, Yinhong
Injection Induced Fracturing as a Necessary Evil in Geologic CO₂ Sequestration ........................................................................................................430
Taylor, Jacob; Bryant, Steven; Wu, Yan; Frei-Pearson, Abraham
Innovative In Situ Stress Testing Using Unconventional Equipment and Procedures for High-Pressure Hydropower Tunnels .................................................................................................................................440
Duckworth, Peter; Kizilbash, Maessar; Young, John
Integrated Experimental and Computational Study of Hydraulic Fracturing and the Use of Alternative Fracking Fluids.................................................................................................................................................................446
Viswanathan, Hari; Carey, James W.; Karra, Sathish; Porter, Mark L.; Rougier, Esteban; Currier, Robert; Kang, Qinjun; Zhou, Lei; Jimenez, Joaquin; Makedonska, Natalia; Chen, Li; Hyman, Jeffrey
Observation and Modeling of Fluid Flow Under Matrix and Fracturing Injections in Unconsolidated Sand

Numerical Study on the Heterogeneities of Rock Material Under Brazilian Test

Numerical Study of Rock Aggregate Materials Under Various Loadings

Numerical Study of Crack Coalescence in Rock Under Quasi-Static and Dynamic Loading by Using the Distinct Lattice Spring Model

Effects of Weathering

Investigation of Roughness Algorithms Applied to Joint Roughness Coefficient Profiles for Assessment of Weathering

Laboratory Measurements of Flow Through Wellbore Cemen-t-Casing Microannuli

Long-Term Compaction Behavior of Permian Sandstones – An Investigation Into the Mechanisms of Subsidence in the Dutch Wadden Sea

Long-Term Creep Experiments on Haynesville Shale Rocks

Mapping Permeability Tensors in Fractured Geothermal Reservoirs Using MEQ Data

Matching 4D Seismic Time-Shifts in Structurally Complex Overburdens with 3D Geomechanica Models

Mechanical Testing and Sealing Capacity of the Upper Jurassic Draupne Formation, North Sea

Mechanisms of EGS Creation at the Geysers (California) Revealed by Seismic Tomography, Spatiotemporal Evolution of the Microseismic Events and Geomechanical Simulations

Microstructure and Micromechanics of Wellbore Cements Under Compression and Thermal Loading

Modeling Interaction Between Natural Fractures and Hydraulic Fractures in Block Cave Mining

Modeling Natural Fracture Network Using Object-Based Simulation

Modeling Overburden Strata Movement in Shallow Coal Seam Longwall Mining

Movement Regularities of Roof Strata in Extra Thick Coal Seams with Fully-Mechanized Mining

Multi-Scale X-FEM Faults Simulations for Reservoir-Geomechanical Models

Nanoindentation Creep Measurements on Shale

Nonlinear Failure Mechanism and Dynamic Simulation of the Deep Rock Engineering

Numerical Calculation of Fault Reactivation and Resultant Seismic Behavior Related to Cuttings Reinjection in Offshore West Africa

Numerical Model of Extended Leak-Off Test (XLOT)

Numerical Model of Hydraulic Fracturing Fluid Transport in the Subsurface with Pressure Transient and Density Effects

Numerical Modelling of Casing Integrity in Salt Layers Including the Effects of Dissolution and Creep

Numerical Simulation for Shear Behaviors of Rock Joints Under Direct Shear Test

Numerical Simulations on the Motions of Supercritical Carbon Dioxide Jet and Its Abrasive Particle

Numerical Study of Crack Coalescence in Rock Under Quasi-Static and Dynamic Loading by Using the Distinct Lattice Spring Model

Numerical Study of Rock Aggregate Materials Under Various Loadings

Numerical Study on the Heterogeneities of Rock Material Under Brazilian Test

Observation and Modeling of Fluid Flow Under Matrix and Fracturing Injections in Unconsolidated Sand

On Poroselastic Inclusions and Its Applications in Reservoir Mechanics

On the Tuning in the Weak Slate Formations in Taiwan

Effects of Weathering

Investigation of Roughness Algorithms Applied to Joint Roughness Coefficient Profiles for Assessment of Weathering

Laboratory Measurements of Flow Through Wellbore Cemen-t-Casing Microannuli

Long-Term Compaction Behavior of Permian Sandstones – An Investigation Into the Mechanisms of Subsidence in the Dutch Wadden Sea

Long-Term Creep Experiments on Haynesville Shale Rocks

Mapping Permeability Tensors in Fractured Geothermal Reservoirs Using MEQ Data

Matching 4D Seismic Time-Shifts in Structurally Complex Overburdens with 3D Geomechanica Models

Mechanical Testing and Sealing Capacity of the Upper Jurassic Draupne Formation, North Sea

Mechanisms of EGS Creation at the Geysers (California) Revealed by Seismic Tomography, Spatiotemporal Evolution of the Microseismic Events and Geomechanical Simulations

Microstructure and Micromechanics of Wellbore Cements Under Compression and Thermal Loading

Modeling Interaction Between Natural Fractures and Hydraulic Fractures in Block Cave Mining

Modeling Natural Fracture Network Using Object-Based Simulation

Modeling Overburden Strata Movement in Shallow Coal Seam Longwall Mining

Movement Regularities of Roof Strata in Extra Thick Coal Seams with Fully-Mechanized Mining

Multi-Scale X-FEM Faults Simulations for Reservoir-Geomechanical Models

Nanoindentation Creep Measurements on Shale

Nonlinear Failure Mechanism and Dynamic Simulation of the Deep Rock Engineering

Numerical Calculation of Fault Reactivation and Resultant Seismic Behavior Related to Cuttings Reinjection in Offshore West Africa

Numerical Model of Extended Leak-Off Test (XLOT)

Numerical Model of Hydraulic Fracturing Fluid Transport in the Subsurface with Pressure Transient and Density Effects

Numerical Modelling of Casing Integrity in Salt Layers Including the Effects of Dissolution and Creep

Numerical Simulation for Shear Behaviors of Rock Joints Under Direct Shear Test

Numerical Simulations on the Motions of Supercritical Carbon Dioxide Jet and Its Abrasive Particle

Numerical Study of Crack Coalescence in Rock Under Quasi-Static and Dynamic Loading by Using the Distinct Lattice Spring Model

A New Stacked Height Growth Model for Hydraulic Fracturing Simulation .................................................................................. 2490
Cohan, Charles-Edouard; Weng, Xiaowei; Kresse, Olga
Acidizing of Hollow Cylinder Chalk Specimens and Its Impact on Rock Strength and Wormhole Network Structure ...................... 2500
Walle, Lars Erik; Papamichos, Euripides
Acoustic Emission Monitoring Elucidates Proppant Pack Strength Characteristics During Crush Testing.................................................................2504

Advances in the Use of New-Age Complex Fracture Modeling, Earth Modeling, and Reservoir Simulation Tools as an Asset Well Planning Tool ..........................................................................................................................2512

An Integrated Analytical Workflow for Analyzing Wellbore Stress, Stability and Strengthening ........................................................................2522

An Investigation of Rough Surface Closure with Application to Fracturing ..............................................................................................................2533

Application of Rock Physics in Wellbore Stability Modeling for Chayvo Field Multi-Lateral ERD Wells ..................................................................2542

Boundary Element Analysis of Non-Planar Three-Dimensional Cracks Using Complex Variables ................................................................2548

Building a Rock Mass Model for a Large Open Pit ..............................................................................................................................................2556

Characteristic Triaxial Strength of Intact Rock ..................................................................................................................................................2565

Characteristics of Mechanical Wellbore Failure and Damage: Insights of Discrete Element Modelling and Application to CO2 Storage .................................................................2572

Critical Pressure and Scaling in Cavity Expansion Tests .................................................................................................................................2627

Dilatancy of Clay Shales and Its Impact on Pore Pressure Evolution and Effective Stress for Different Triaxial Stress Paths ............................................2636

Discrete Modeling of Multiple Discontinuities in Rock Mass Using XFEM ..................................................................................................................2643

Dynamic Rupture Modeling of Injection-Induced Seismicity: Influence of Pressure Diffusion Below Porous Aquifers ................................................................................................................2655

Effect of Anisotropy on Fracture Toughness and Fracturing of Rocks ......................................................................................................................2665

Effect of Hydraulic Diffusivity and Slipping Zone Thickness on Thermal Pressurization Process During Seismic Slip ................................................................2671

Effect of Rheology on Drilling Mud Loss in a Natural Fracture ........................................................................................................................................2678

Estimation of Rock Strength by Means of Scratch Probe .................................................................................................................................2696

Evaluation and Selection of Surface and Production Casings for the New Wells at Eti Soda’s Beyazpazi Trona Deposits ..............................................................................................................................2704

Experimental Demonstration of Delayed Initiation of Hydraulic Fractures Below Breakdown Pressure in Granite ..................................................2715

Experimental Investigation of Cement to Rock Bonding .................................................................................................................................2722

Experimental Investigation of Hydraulic Fracturing of Shale with Water ..................................................................................................................................2733

Experimental Study of Fracture Initiation and Propagation from a Wellbore ........................................................................................................2739

FDEM Simulation on a Triaxial Core-Flood Experiment of Shale ..........................................................................................................................2746

FDEM Simulation on Rock Coalescence in Brittle Materials ...............................................................................................................................2751
Filter Cake Behavior During Leakage at the Cement-Rock Interface in Wellbores .................................................................................................................................2757
Lavrov, Alexandre; Todorovic, Jelena; Sobolik, Steven

Fracture Testing in Modes I, II, and III on Escabrosa Limestone ..................................................................................................................2765
Shimo, Michito; Shimaya, Susumu; Macjima, Toshio

Gas Transport Characterization of Fractured Rock by In-Situ Gas-Injection Tests ..................................................................................................................2771
Shimo, Michito; Shimaya, Susumu; Macjima, Toshio

Geomechanical Evaluation of Fault Reactivation Potential and Uplift at the South West Hub Geological CO2 Storage Site, Western Australia ........................................................................................................................................................................2779
Kalra, Sumeer; Wu, Xingru; Quadros; Vargas Jr., Eurípedes do Amaral; Kiewiet, Leigh Hessel; Kager, Shane

Geomechanical Modeling to Predict Wellbore Stresses and Strains for the Design of Wellbore Seal Repair .................................................................................................................................2788
Todorovic, Jelena; Opedal, Nils; Jafarzade, Gutlug; Torsater, Malin; Akervoll, Idar

Materials for Use at a CO2 Injection Site ..................................................................................................................................................................................................................2798
Sobolik, Steven; Matteo, Edward; Gomez, Steven; Dewers, Thomas; Newell, Pania; Stormont, John; Taha, Mahmoud

Hidden Impact of Mud Loss on Wellbore State of Stresses Disclosed by Thermal-Poro-Elastic Modeling .................................................................................................2798
Chen, Yuanhang; Yu, Mengjiao; Takach, Nicholas; Shi, Zhaorui; Gao, Chao

History and Mechanics of Rock Slope Instability Along Telegraph Hill, San Francisco, California .......................................................................................................................2809
Tallin, Andrew; Han, Yanhui; Wong, George

Impact of Depletion on Integrity of Sand Screen in Depleted Unconsolidated Sandstone Formation .......................................................................................................................2818
Tallin, Andrew; Han, Yanhui; Wong, George

Influence of Indexation and Impact Energy on Bit/rock Interface Law in Percussive Drilling: An Experimental Study ........................................................................................................................................................................2827
Fourmean, Marion; Depoushon, Alexandre; Hoang, Hieu Nguyen; Kane, Alexandre; Detournay, Emmanuel

Integrated 1-D Workflow for Pore-Pressure Prediction and Mud-Weight Alexander Subsalt Well Sections ........................................................................................................................................................................2834
Shen, Xingu; Shen, Guoyang; Clemmons, Crystal

Interpretations of Fracture Initiation and Orientations in A Perforated Deviated Well Window Calculation for the Subsalt Well ........................................................................................................................................................................2841
Wang, Yarlong; Karoulamis, Fotios; Zeng, Yijing; Zhang, Baoping; Zeng, H.

Investigation of the Effect of Cyclic Loading on Fracture Propagation in Rocks by Using Computed Tomography (CT) Techniques ........................................................................................................................................................................2851
Ghamgosar, Mortaza; Erarslan, Nazife; Stewart, P.

Loading Rate Dependency of Dynamic Fracture Toughness of Rocks ..................................................................................................................................................................................................................2856
Shewalla, Mahendra; Smith, John R.; Sharma, Radhey S.

Measurements of Fracture Aperture in Granite Core Using Microfocus X-Ray CT and Fluid Flow Simulation ........................................................................................................................................................................2869
Kishida, Kiyoshi; Ishikawa, Tomohiro; Higo, Yosuke; Sawada, Arai; Yasharara, Hideaki

Michell–Fourier Analytical Treatment of Stresses in the Ring Test Under Parabolic Compression ........................................................................................................................................................................2875
Serati, Mehdi; Williams, David J.

Micro-Scale Modeling of the Inelastic Response of a Granular Sandstone .......................................................................................................................................................................................2881
Esna Ashari, Shiva; Buscarnera, Giuseppe; Cusati, Gianluca

Microscopic Observations of Shale Deformation from In-Situ Deformation Experiments Conducted Under a Scanning Electron Microscope ........................................................................................................................................................................2887
Sone, Hiroki; Morales, Luiz F.; Dresen, Georg

Modeling Dynamic Stimulation of Geological Resources ..................................................................................................................................................................................................................2894
Yavovb, Oleg; Herbold, Eric; Morris, Joe; White, Bradley

Modeling of Failure Behavior of Anisotropic Shale Using a Lattice Discrete Particle Model ........................................................................................................................................................................2899
Li, Weixin; Jin, Congrui; Salvatino, Marco; Cusati, Gianluca

Modeling Stray Gas Leakage from Wellbores in Colorado Shale Gas Operations ..................................................................................................................................................................................................................2908
Lackey, Greg; Rajaram, Harishar; Karras, Satoshi; Viswanathan, Hari

Modelling the Shear Behaviour of Sedimentary Rock Joints Under Constant Normal Stiffness Conditions ........................................................................................................................................................................2918
Thrakumar, Sivanathan; Indraratna, Budhithana; Brown, E.T.

Multiphase Flow in Fractured Porous Media: Application to CO2 Leaksages from Natural and Stimulated Fractures ........................................................................................................................................................................2923
Ezzedine, Stuill

Numerical Creep Analysis of Chalk Cavities Accounting for Joints Degradation ..................................................................................................................................................................................................................2935
Rafeh, Faten; Bardon, Sebastian; Mroueh, Hussein

Numerical Modeling of Rock Brazilian Test: Effects of Test Configuration and Rock Heterogeneity ..................................................................................................................................................................................................................2944
Gheibi, Soroush; Holt, Rane M.; Lavrov, Alexandre; Mar Ivanr, Diego

Numerical Modeling Technique for Time Dependent Behavior of Weak Rock Masses - A Case Study ..................................................................................................................................................................................................................2953
Kalu, Raj; Tharaj, Rahul; Barnard, Chase

Numerical Modeling of Rock Mechanics Experiments as an Input for Coupled Hydromechanical Simulation ........................................................................................................................................................................2962
Soares, Antonio Claudio; Kiewiet, Melissa Cristina Duque Nogueira; Falcao, Flavia de Oliveira Lima; Velloso, Raquel Quadros; Vargas Jr., Eurípedes do Amaral; Kiewiet, Leigh Hessel; Kager, Shane

Numerical Simulation Study on CO2 Injection for Enhancing Hydrocarbon Recovery and Sequestration in Tight Oil Formations ........................................................................................................................................................................2970
Kadra, Sumeth; Wu, Xingru

Numerical Study of the Impact of CO2-Fluid-Rock Interactions on Permeability and Porosity Evolution in Fractured Carbonate Rocks ..................................................................................................................................................................................................................2978
Hao, Yue; Smith, Megan; Mason, Harris; Carroll, Susan

Numerical Study of Thermal Stresses in Casing-Cement-Rock System with Heterogeneity ..................................................................................................................................................................................................................2996
Lavrov, Alexandre; Todrosvic, Jelena; Torsaeter, Malin
Numerical Study on Long-Time Deformation Characteristics of Soft Clay Around Subway Tunnel Under Train Vibration Load
..........................................................................................................................................................................................3005

Optimization of Pipe Roof Design for Gongbei Port Tunnel Excavation
........................................................................................................................................................................................................3013

Optimizing Drilling Parameters: A Preliminary Model - Drilling Carthage Marble with Oil Based Mud and PDC Bit
........................................................................................................................................................................................................3021

Predicting Intrinsic and Apparent Permeabilities from Core Size Distribution in Tight Porous Materials
........................................................................................................................................................................................................3026

Probabilistic Time-Dependent Thermo-Chemo-Poroelastic Borehole Stability Analysis in Shale Formations
