Advanced Fossil Energy Utilization 2014

Topical Conference at the 2014 AIChE Annual Meeting

Atlanta, Georgia, USA
16-21 November 2014

(275a) Brief Review of Catalytic Oxidative Coupling of Methane to Ethane and Ethene ........................................ 57
   Evan J. Granite

(275b) Reaction Studies on Na2WO4·Mn/SiO2 Catalyst for Oxidative Coupling of Methane ..................................... 60
   Fua Aseem, Geoffrey Goldwin, Marion Conato, Jeffrey D. Rimer, Michael P. Harold, Ken Blackmon

(275c) Stabilization of ZnO in ZSM-5 for Methane Dehydroaromatization ................................................................. 62
   Yangchiew Lai, Güç Veser

(275d) Oxidation of Methane and Ethane to Oxygenates Under Mild Aqueous Conditions Using ZSM-5 Catalysts .......................................................... 64
   Graham J. Butchings, Ceri Hammond, Michael Forde, Nikolaos Dimitratos, Robert Armstrong

(275e) Development of a Two Beds Circulating Fluidized Bed Reactor System for Non-Oxidative Aromatization of Methane over Mo/HZSM-5 Catalyst .................................. 66
   Zhanguo Zhang, Yuebing Xu, Yang Song, Yoshizo Suzuki

(275f) Chemical Looping Reforming of Methane in the Presence of Core-Shell Redox Catalysts .......................... 74
   Luke Neal, Arya Shafieifarzad, Fanxing Li

(344a) Overview of the U.S. DOE Fossil Energy Advanced Energy Systems Program ........................................ 75
   Richard Dennis, Jared Ciferno

(344b) Status of CO2 Capture Technologies ................................. 76
   Abhoyjit S. Bhowan

(344c) Accelerating Materials Discovery and Development for Fossil Energy Applications Using High-Throughput Computation ........................................ 77
   David S. Sholl

(344d) Advanced CO2 Capture As a Source for Oil and Gas Applications ................................................................. 78
   Teresa Grocela

(380a) A Novel Reactor Type for Autothermal Reforming of Diesel Fuel and Kerosene ............................................ 79
   Joachim Pasel, Remzi Can Samsun, Andreas Tschauer, Ralf Peters, Detlef Stolten

(380b) Pyrochlore (A2B2O7) Based Catalysts for Hydrogen Production By Hydrocarbon Reforming .................. 85
   Devendra Pahare, Jeff Harrison

(380c) Hydrogen Production from Renewable and Waste Oils ........................................................................... 86
   Girish Srinivas, Steven Gebhard, Robert Copeland, Jeff Martin

(380d) Heat-Integrated Steam Reformer for Hydrogen Production ................................................................. 87
   Saurabh A. Vilekar, Christian Junaid, Kate Hawley, Dennis Walsh, Sabir Roychoudhury

(380e) Development of Diesel Pre-Reformer for Methane Rich Gas Production .................................................... 88
   Joongmyeon Bae, Sangho Lee, Minseok Bae, Sai P. Katikaneni

(380g) Desulfurization of Associated Gas for Solid Oxide Fuel Cell Applications ........................................ 105
   Feraih Alenazey, Yousef Alyousef, Santosh Gangwal

(380h) Sulfatrap Sorbents for Effective Sulfur Removal for Fuel Cells: Dimethyl Sulfide, Mercaptan and COS Adsorption ........................................................................... 106
   Gökbahan Alpözen, Ambaranjan Jayaraman, Matthew Schaefer

(380i) Ultra-Deep Desulfurization of Hydrocarbon Fuels Using TiO2 and Ag-TiO2 Adsorbents Assisted By UV Irradiation ............................................................................ 107
   Xuexi Sun, Bruce J. Tatarachuk

(444a) Catalytic and Technological Aspects of Reforming Methanol to Electricity inside a Fuel Cell .................. 108
   George Avgouropoulos

(444b) A 5 Kwel Propylene Glycol Microchannel Fuel Processor As Hydrogen Source for Fuel Cells .......... 109
   Joach Schaerer, David Tiemann, Athanassios Ziogas, Gunther Kolb

(444c) Biogas Steam and Oxy-Steam Reforming Reactions over MoO3--Based (Mo = Rh, Pt, Ni) Structured Cordierite Monoliths ................................................................. 110
   Antonio Vita, Giuseppe Cristiano, Cristina Iannelli, Lidia Pino, Stefania Specchia

(444d) Production of High-Purity Hydrogen from Glycerol for Fuel Cell Applications ............................................ 113
   Devinder Mahajan, Hazem Tawfik, Yue Hung, Scott Turn, Ofeci D. Mante

(444e) Production of Hydrogen from High BTU Natural Gas By Non-Thermal Plasma ........................................... 115
   Lyman Frost, Joseph Hartvigsen, Elango Elangovan

(444f) Kinetic Modeling of Decomposition Reactions in Novel Microplasma Reactors ........................................ 116
   Peter J. Lindner, R. S. Besser

(444h) Steam Reforming of Bio-Oil Model Compounds for Sustainable Hydrogen Production ....................... 117
   Kepa Bizkarrar, V. L. Barrio, J. Requies, P. L. Arias, J. F. Cambra

(500a) Micro-Structured Reactors for Fuel Processing ........................................................................... 125
   Gunther Kolb

(500b) Annular Micro-Channel Reactors; Efficient and Scalable CH4-Steam Reformers ...................................... 126
   Peter Bossard, Luis Breziner, Casey Quenzel, Holly Butcher, Benjamin A. Wilhite
(500c) Sorption-Enhanced Variable Volume Membrane Reactor for Hydrogen Production from Methane: Modeling and Experimental Characterization .......................................................... 127
David M. Anderson, Peter A. Kotke, Thomas Yun, Andrei G. Fedorov
(500d) A Novel TPOX-Based “Swiss-Roll” Fuel Reformer .................................................................................................................. 131
Chien-Hua Chen, Howard Pearman, Paul Ronney
(500e) Characterization and Mechanistic Study of Dry Reforming of Methane over Rh Substituted Lanthanum Zirconate (La2Zr2O7) Pyrochlores .......................................................... 132
Devendra Pahade, Viviane Schwartz, Daniel J. Haynes, Victor-Abdelkayed, Dushyant Shekhawat, James J. Spivey
(500f) Oxygen-Enhanced Water Gas Shift over Bimetallic Catalysts for More Efficient Hydrogen Production ........................................................................................................... 133
Chunsham Song, Junichiro Kogai, Elise B. Fox
(500g) Fabrication of Compact Catalytic Membrane Reactor Using Nanosize Catalysts and Atomic Layer Deposition .................................................................................................. 134
Shuai Tan
(551a) Rational Design of Nano-Structured Oxygen Carriers for Chemical Looping Conversion of Methane .................................................................................................................. 135
Fanxing Li
(551b) Encapsulated Iron Oxide Nanoparticles for Chemical Looping Based Hydrogen Production .......................................................... 136
Davod Hosseini, Christoph R. Müller
(551c) Fe and Ni-Based Oxygen Carriers for CO2 Activation Via Chemical Looping ........................................................................ 137
Amev More, Saurabh Bhavsar, Götz Vester
(551d) Continuous Regime of Clc/CLOU Reactivity and Its Impact on the Dynamic and Steady State Performance of CuO, Oxygen Carriers .......................................................... 139
Zhiqian Zhou, Oscar Nordness, Lu Han, George M. Bollas
(551e) Perovskite Based Oxygen Carriers for Chemical Looping with Oxygen Uncoupling (CLOU) ......................... 141
Nathan Galinsky, Amit Mishra, Fanxing Li
(551f) In-Situ X-Ray Absorption Spectroscopy Study of Na-Doped and Al2O3-Stabilized, CuO-Based Oxygen Carriers for Chemical Looping Combustion and Chemical Looping with Oxygen Uncoupling ................................................................. 142
Qasim Imtiaz, Paula Abdala, Agnieszka Kierzkowska, Wouter Van Beek, Davood Hosseini, Christoph Mueller
(584a) Optimal CO2 Capture and Utilization (CCU) Supply Chain Network for Enhanced Oil Recovery .................................................................................................................. 144
M. M. Faruque Hasan, Eric L. First, Fani Boukouvala, Christodoulos A. Floudas
(584b) Optimal Synthesis of CO2 Utilization Processes Integrated with a Supercritical Pulverized Coal Power Plant ........................................................................................................... 147
Job Kasule, Debangsu Bhattacharyya, Richard Turton, Stephen E. Zitney
(584c) Process and Economic Analysis of Synthetic Fuel Production from CO2 .......................................................................................................................... 148
Ioanna Dimitriou, Pelayo Garcia-Gutierrez, Rachael H. Elder, Ray W. K. Allen
(584d) Co-Electrolysis of Carbon Dioxide and Steam for a Carbon Neutral Fuel Cycle .......................................................... 149
Rachael H. Elder, Denis J. Cumming, Kayode T. Omojola, Jevgenija Manerova
(584e) A Generalized Framework for the Assessment of Solar Fuels Technologies .................................................................................................................. 150
Jeffrey A. Herron, Jiyoung Kim, Aniruddha Upadhye, George W. Huber, Christos T. Maravelias
(584f) Thermochemical Dissociation of CO2 into Renewable Fuels Via Ce, Zr, Hf, O2 Based Redox Reactions Using Concentrated Solar Energy ........................................................................... 152
Rahul Bhosale, Ivo Alsneit, Anand Kumar, Lip Van Den Broeke, Jamila Foladcy, Dareen Dardor, Shahd Gharbia, Mehak Jilani
(584g) Hydrogen and Carbon Monoxide Production By Co-Electrolysis of H2O and CO2 Using Solid Oxide Cells .................................................................................................................. 161
Feraih Allazay, Yousef Alyousef, Elviroza Brancaccio, Dario Montinano
(584h) CO2 Utilization As Oxidant for High Value Hydrocarbons .......................................................................................................................... 163
Abhishek Burri, Yong-Hwan Mo, Ranjit Kulkarni, Sang-Eon Park
(639a) High Temperature Mercury Oxidation Catalyst for Mercury Emissions Control .......................................................... 164
Zhouyang Liu, Can Li, Vishnu Sriman, Joo-Young Lee
(639b) Mercury Control Strategies in Coal-Fired Power Plants .......................................................................................................................... 165
Noah D. Meeks
(639c) Evaluation of Oxidized Mercury Species Desorbed from Hg Sorbents for Coal-Fired Flue Gas Applications .................................................................................................................. 166
Erik C. Rupp, Jennifer Wilcox
(639d) Hg Removal Technologies for Hydrocarbon, Reducing, and Water Streams .......................................................................................................................... 167
Sravan Pappu, Andrea Foster, Rachel Mansfield
(639e) Elemental Mercury Oxidation in an Electrostatic Precipitator with in-Situ Soft X-Rays .......................................................................................................................... 168
He Jing, Xiaofei Wang, Wei-Ning Wang, Pratim Biswas
(639f) Chemistry and Absorption Kinetics of Mercury from Flue Gases By Aqueous Strong Oxidants ............................... 169
  Yusuf G (Debo) Adewuyi

(639g) Rapid Detection of Trace Element Concentrations Using Laser Induced Breakdown Spectroscopy and Laser-Breakdown Time-of-Flight Mass Spectrometry .......................................................... 170
  Yoshihiro Deguchi

(693a) Oxidation Reaction Kinetics of Elemental Mercury Vapor with Cupric Chloride for Mercury Emission Control .................................................................................................................. 184
  Can Li, Vishnu Sriram, Zhouyang Liu, Joo-Youp Lee

(693b) Investigation on the Chemical Degradation of SOFC Anode Caused By the Trace Level of Sulfur and Other Elements Possibly Contained in Coal Derived Fuel Gas .................................................................. 185
  Koji Kuramoto, Toshiyo Fukushima, Sou Hosokai, Koichi Matsuoka, Yoshizo Suzuki, Haruo Kishimoto, Katsuhiko Yamaji, Teruhisa Horita

(693c) Designing Advanced Activated Carbons for Enhanced Mercury Capture ................................................................. 186
  Joe Wong, Roger Cayton, Jacob Lowring

(693d) Sustainable Materials for Mercury Control ...................................................................................................................... 195
  K. Thomas Klasson, Isabel M. Lima, Minori S. Uchimiya

(693f) Cadmium, Phosphorous and Antimony Adsorption on Copper-Palladium Alloy Films .................................................. 196
  Karen J. Uffalussy, James B. Miller, Bret H. Howard, Dennis Stanko, Evan J. Granite

(730a) Uncertainty Quantification of Properties Models: Application to a CO2-Capture System .................................................. 197
  Joshua Morgan, Benjamin Omell, Debangsu Bhattacharyya, Charles Tong, David C. Miller

(730b) Characterization of Dialkylimidazolium Bistriflamide Ionic Liquids for CO2 Capture ......................................................... 198
  Ruth E. Baltus, Surya Sekhar Moganty, Sitaraman Krishnan, Venkat Kalyan Vendra, Pavan Chinthamanipeta

(730c) Long Term Durability of Dolomite-Derived MgO-Based Sorbent for CO2 Capture in IGCC .................................................. 199
  Shahin Zarghami, Javad Abbasian, Hamid Arastoopour

(730d) Dynamic Modeling and Control of an Integrated Solid Sorbent Based CO2 -Capture Process ........................................ 200
  Benjamin Omell, Debangsu Bhattacharyya, Stephen Zitney, David C. Miller

(730e) Numerical Simulation of a Pyrolysis and Re-Burning Combinative Low-NOx Grate Boiler ............................................. 202
  Jing Wang, Dr. Helen Lou, Fangqin Cheng
