# TABLE OF CONTENTS

(20a) Effect of Deviation from Ideality of Different Pore Geometries for Zero Order Electrochemical Reactions  
   Njideka H. Okoye, Dr. Pedro E. Arce, Dr. Yung Way Liu ................................................................. 1

(20b) Design of a Novel Polymeric Acid Catalyst for Biomass Hydrolysis ............................................... 2
   Xiaoquan Sun, Xianghong Qian ........................................................................................................... 2

(20c) Modeling the Production of Aromatics from Biomass in Solid Acid Zeolites  
   Ryan Patet .......................................................................................................................................... 3

(20d) Mechanistic Insights into Fructose Dehydration to 5-(hydroxymethyl)Furfural ................................ 5
   Vinut Choudhary, Liu Yang, George Tsilomelekis, Stavros Caratzoulas, Vladiimoiros Nikolakis, Stanley I. Sandler,  
   Dionissos G. Vlachos ....................................................................................................................... 5

(20e) A CFD Pressure Drop Model for Microfibrous Entrapped Catalyst Filters Using Micro Scale Imaging  
   Qiang Gu, Bruce Tutanchak .............................................................................................................. 6

(20f) Kinetics of Jatropha Oil Methanolysis ......................................................................................... 15
   Mario Andres Noriega, Paulo C. Narvaez, Juan Guillermo Cadavid, Christoph Heinz, Nevardo Bello .......... 15

(20g) Catalyst-Scale Modeling of Fischer-Tropsch Synthesis from Syngas Using Comsol Multiphysics .......... 17
   Arvind Nanduri, Patrick L. Mills ......................................................................................................... 17

(63a) Applications of Computational Chemistry and Molecular Simulation for Product and Process  
   Development ....................................................................................................................................... 25
   Andrew J. Adamczyk, Agnes Derecskei-Kovacs ................................................................................ 25

(63b) Force Field Assessment for Predicting Vapor-Liquid Equilibrium of Water in Ionic Liquids ............... 26
   Eliseo Marin-Rimoldi, Edward J. Maginn ........................................................................................... 26

(63c) Accurate Calculations of Partition Coefficients (Log POW and Log PMW) with Atomistic  
   Simulation Methods ......................................................................................................................... 27
   Dirk Reith, Axel W. Arnold, Thorsten Köddermann ............................................................................. 27

(63d) Molecular Dynamics Simulations of Structure-Property Relationships of Tween® 80 in Water  
   and at Interfaces ............................................................................................................................... 28
   Xueming Tang, Ronald G. Larson ....................................................................................................... 28

(63e) Computational Screening of Cellulosic Excipients for Drug Delivery ............................................. 29
   Ronald G. Larson, Prateek Jha .......................................................................................................... 29

(63f) Application of Molecular Simulations: Molecular Understanding of Electrospinning  
   Ivo Nezbeda ....................................................................................................................................... 30

(63g) Vapor-Liquid Coexistence Data for p-Cymene Using Equation of State Methods and Monte  
   Carlo Simulations ............................................................................................................................... 31
   Madakashira Harini, Jhumpa Adhikari, K Y Rani ................................................................................ 31

(64a) Towards Transparent Aluminum ...................................................................................................... 33
   Sharon C. Glotzer ............................................................................................................................... 33

(64b) Structure-Conductance Relationships in Atomic-Scale Junctions: Insights from Reactive  
   Molecular Simulation ......................................................................................................................... 34
   Christopher R. Iacovella ...................................................................................................................... 34

(64c) Number Crunching or Solving Problems? Peter's Impact on My Research Philosophy ..................... 35
   Alberto Striolo ................................................................................................................................... 35

(64d) Ionic Conductivities of Ionic Liquids and Solutions Containing Ionic Liquids  
   Joan F. Brennecke ............................................................................................................................... 36

(64e) Simulations of Thermodynamic and Transport Properties for Aqueous Mixtures  
   Ahanasios Z. Panagiotopoulos .......................................................................................................... 37

(64f) Effects of Crowders, Inhibitors and Interfaces on A-beta Peptide Aggregation Using  
   Coarse-Grained Simulations ............................................................................................................... 38
   Carol K. Hall, David C. Latshaw II .................................................................................................... 38

(64g) Molecular Modeling Insights into the Mechanisms for Viscosity Trends in Ionic Liquids ............... 39
   Edward J. Maginn, Yong Zhang ......................................................................................................... 39

(120a) On the Nature of the Active Sites for Formic Acid Decomposition on Supported Au Catalysts .......... 40
   Sha Li, Suyash Singh, Ronald Carrasquillo-Flores, Ana C. Alba-Rubio, James A. Dumesic, Manos Mavrikakis

(120b) First-Principles Based Kinetic Monte Carlo Simulation of Catalytic Systems over Metal  
   Particles ............................................................................................................................................. 41
   Eric Dybeck, Matthew Neurock

(223c) Molecular Simulations of the Critical Point for Molecules That Decompose Experimentally
Richard A. Messery

(223d) Molecular Descriptor Based Random Forest Predictors of Ionic Liquids
Zelimir Kurtanjek

(223e) Mbuild: A Hierarchical, Component Based Molecule Builder
Christoph Klein, János Sallai, Christopher R. Iacovella, Clare McCabe, Peter T. Cummings

(223f) Interfacial Properties of Realistic Molecular Fluids: A Combined Molecular Simulation and Classical Density Functional Theory Approach
J. Richard Elliott Jr., Ahmadreza F. Ghobadi

(223g) A Density Functional Theory Approach for Estimation of Electrode Potential Dependent Activation Barriers
Nicole Bernstein, Monica Esopi, Xiaowu Nie, Aravind Asithagiri, Michael J. Janik

(223h) Mesoscale Simulations of Lipid Membranes Supported on Solid Surfaces
Zhengjia Wang, Ting Li, Aleksey Vohyakov, Alexander V. Neimark

(223i) Molecular Modeling of Homogeneous Nucleation of [Bmim+][Cl-] from the Melt
Yan Shen

(223j) Green Leaf Volatiles on Atmospheric Air/Water Interfaces: A Combined Experimental/Molecular Simulation Study
Zenghai Zhang, Thilanga P. Miyana-Arachchi, Franz S. Ehrenhauser, Amie K. Hansel, Christopher Stevens, Andrew T. Pham, Harsha Vempati, Kaifai T. Valsaraj, Francisco R. Hung

(223k) Molecular Dynamics Simulations of Hydrophobins Encapsulating Organic Molecules: Can Hydrophobins be Used As Oil Dispersants?
Yuwa Chen, Francisco R. Hung, Paul Russo

(223l) Direct Evaluation of Polypeptide Partial Molar Volumes in Water Using Molecular Dynamics Simulations
Lalitanand N. Surampudi

(223m) Multi-Scale Modeling Study of Poly(3-hexylthiophene) and [6,6]-Phenyl-C61-Butyric Acid Methyl Ester Towards Organic Photovoltaic Cell Application
Hanjong Yoo, Ki Chul Kim, Seung Soon Jung

(223n) The Mechanical Property of Dental Resin Composite Consisting of BisGMA and TEGDMA Using Molecular Dynamics Simulations
Yoon Hwan Jeong, Jaeho Shin, Hean Gee Lee, Taewan Kim, Hyea Hennim Hwang, Seung Soon Jung

(223o) Molecular Modeling of the Polymerization Behavior of Poly(vinylimidazole) in an Ionic Liquid Solution
Lee Sangmin

(223p) Molecular Thermodynamic Analysis for an Abnormal Phase Behavior of PMMA Solution in PEG200/Acohol Solutions
J. Ryan Hamilton, John W. Whitley, Jason E. Bara, C. Heath Turner

(223q) Development of Reaxff Simulation Techniques for Assessing in Situ Phase Behavior of Pd-Based Catalysts
Thomas Patrick Sontiffe, Adri C.T. van Duin, Michael J. Janik

(223r) Association of Poly(2-oxazoline) Chains with Water Molecules: Molecular Dynamics Simulation Approach
Byeongjae (Ben) Chun, Seung Soon Jung

(223s) Effect of the Modified Erythrosine B on Amyloid β 40 Monomer As an Inhibitor for the Fibril Using Molecular Modeling Approach
Juho Lee, Woo Yaa Lee, Sunja Kang, Joy Kim, Hee Su Lee, Doyeon Koo, Hyea Hennim Hwang, Inchan Kwon, Seung Soon Jung

(223t) Why Pucker, Sugar? Computational Chemistry Investigations into Carbohydrate Ring Distortion for Enzymatic Action
Heather B. Mayes, Linda J. Broadbelt, Gregg T. Beckham

(223u) Molecular Dynamic Simulations of Cross-Linked Polyamide Reverse Osmosis Membrane
Kyungtae Park, Jaewuk Ahn, Mi Hyang Park, Jangmin Han, Hanbyeol Jin, Seung Soon Jung

(223v) Using Density Functional Theory to Examine the Specific Adsorption of Ions to Electrode Surfaces
Ian T. McCrum, Jennifer N. Mills, Michael J. Janik

(223w) Optimum Exciipient Selection and Design for Protein Drugs
Haider S. Tarar

(223x) Towards the Development of a Model for Particle Nucleation
Jeffrey Lowe, Paolo Elvati, Angela Violi
(223y) Nanophase-Segregated Structures and Transport Properties in Polysulfonated (190-PSU-Sn)
Based Ionomers for Proton Exchange Membrane Fuel Cell ......................................................... 186
Young Hun Lee

(223z) Structure-Transport Relationship for Confined Fluids: The Example of CO2 and n-Butane in
Silica Pores ........................................................................................................................................ 187
Thu Le, Thu Le

(284a) Studying Conformational Changes of Mhp1 Using Unbiased All-Atom Molecular Simulation
 ........................................................................................................................... 188
Pouyan Khakhaz, Jeffery Klauda

(284b) Novel, Efficient, and Accurate Methods for Calculating Pressure in Polymer Lattice
Simulations ........................................................................................................................................ 189
Pengfei Zhang, Qiang (David) Wang

(284c) Computation Ready Experimental (CoRE) Metal-Organic Frameworks: A Critical Tool to
Enable High-Throughput Screening of Nanoporous Crystals .......................................................... 190
Yongchul G. Chung, Jeffrey S. Camp, Maciej Haranczyk, David S. Sholl, Randall Snurr

(284d) Accelerated Stochastic Simulation
Che-Chi Shu, Vu Tran, Doraiswami Ramkrishna

(284e) Development of a Dynamic Cutoff Method and Interface Detection Algorithm for Long-Range
Dispersion Interactions .......................................................................................................................... 204
Paul Springer, Paolo Bientinesi, Benjamin Berkel, Ahmed E. Ismail

(284f) Extending a Linear Basis Function Approach to Alchemically Solvating Charged Particles and
Changing Atomic Identity .................................................................................................................... 205
Levi N. Naden, Michael R. Shirts

(349a) The Need for New Tools to Explore Hypothetical Molecular Systems ..................................... 206
Christopher E. Wilmer

(349b) HOOMD-Blue - Development of a Highly Scalable General Purpose Molecular Dynamics Code .... 207
Jens Glaser, Trung Nguyen, Joshua A. Anderson, Pak Lui, David Morse, Sharon C. Glotzer

(349c) Methods for Free Energy Calculations and Other Enhancements in the Gromacs Molecular
Simulation Package ............................................................................................................................. 208
Michael R. Shirts

(349d) Catmap: A Software Package for Descriptor-Based Micro-Kinetic Mapping of Catalytic Trends ............................................................................................................................................. 209
Andrew Medford, Adam Lausche, Sean Fitzgibbon, Thomas Bliquard, Jens K. Norskov

(349e) Accelerating the Discrete Element Method for Faceted Particles Using HOOMD-Blue ................. 210
Matthew Spellings, Ryan L. Marson, Joshua A. Anderson, Sharon C. Glotzer

(349f) Automated Global and Local Optimization Methods for Atomistic Force Field Development ....... 211
Dirk Reith, Thorsten Köddermann, Marco Hallmann, Andreas Krämer, Karl N. Kirschner

(406a) Scalable Monte Carlo Simulations of Millions of Particles on Thousands of GPUs ....................... 212
Joshua A. Anderson, M. Eric Iregang, Sharon C. Glotzer

(406b) Polymatic: A General Simulated Polymerization Algorithm ..................................................... 213
Lauren J. Abbott, Coray M. Colina

(406c) Cassandra: A Novel, Open-Source Monte Carlo Molecular Modeling Platform for Materials
Modeling ................................................................................................................................................ 214
Jindal Shah, Edward Maginn, Eliseo MarinRimoldi

(406d) Development of a GPU Optimized Gibbs Ensemble Monte Carlo Simulation Engine ................. 215
Jason R. Mick, Kamei I. Rushaidat, Brock Jackman, Yuanzhe Li, Loren Schwiebert, Jeffrey J. Potoff

(406e) A Parallel Fortran Code to Perform Density Derived Electrostatic and Chemical (DDEC)
Analysis ................................................................................................................................................ 216
Nidia Gabaldon Limas, Thomas A. Manz

(469b) Molecular Dynamics Investigation of the Products of Alkoxysilane Condensation: Bulk Gels
and Surface Coatings ........................................................................................................................... 217
Joshua D Deetz, Roland Faller

(469c) Hybrid Molecular-Continuum Simulations Using Smoothed Dissipative Particle Dynamics ........... 218
Nikolai D. Petsev, M. Scott Shell, L. Gary Leal

(469d) Enhanced Sampling Methods Provide Insights into Macromolecular Interactions As Drug
Targets .................................................................................................................................................. 219
Harish Vashisth

(469e) Molecular Simulation of Homogeneous Nucleation of Ionic Liquids from the Melt ...................... 220
Xiaoxia He, Yan Shen, Francisco R. Hung, Erik E. Santiso

(469f) Crystal Structure Prediction of Rigid-Molecule Crystals: Application to Hydrate Clathrate .......... 221
Sabry Moustafa, David A. Keefe, Andrew J. Schultz, Lin Weisong

(509a) Heterogeneity and Reduction for Complex Network Dynamics .................................................. 234
Ioannis G. Kevrekidis, Alexander Holiday, Tom Bertalan, Carlo R. Laing
(509b) Multiscale Modeling of Rod-like Structures Using Molecular Dynamics and Continuum Mechanics ................................................................. 236
Roger A. Sauer, Marcus Schmidt, Ahmed E. Ismail

(509c) Continuum/Mesoscale/Molecular Level Hybridization in Complex Fluid Flows ................................................................. 237
Sesha Hari Venuri, Myung S. Jhon, Lorenz T. Biegler

(509d) Quantifying the Free Energy Landscape for Curvature Induction and Sensing in Lipid Bilayer Membranes through a Mesoscale Model ................................................................. 238
Richard Tourdot, Ryan P. Bradley, Ramakrishnan Natesan, Ravi Radhakrishnan

(509e) Rippling Instabilities on the Surface of Stressed Crystalline Solids ......................................................................................... 240
Dwipayan Dasgupta, Lin Du, Dimitrios Maroudas

(509f) Robust Control of Multiscale Process Systems Under Uncertainty: An Application to Epitaxial Thin Film Growth ......................... 241
Shabnam Rasoulian, Luis A. Ricardo-Sanzo

(509g) Lattice Boltzmann Method Based Multiscale Modeling of Two-Phase Flows through Microarchitectures with Microfeatures 242
Agnieszka Truszkowska, Goran Jovanovic

(509h) Characterizing Tip-Surface Contact Between Monolayer Functionalized Silica Surfaces through Molecular Dynamics Simulation 243
Andrew Z. Summers, Christopher R. Iacovella, Clare McCabe, Peter T. Cummings

(520a) Understanding the Self-Assembly of Skin Lipids ............................................................................................................. 244
Clare McCabe

(520b) Entropic and Active Matter: Insights from Simulation ........................................................................................................... 245
Sharon C. Glotzer

(520c) How the Walls Come Crumbling Down: Elucidating Mechanisms of Cellulose-Active Enzymes Using Molecular Simulation 246
Gregg T. Beckham

(520d) Isolated Catalyst Sites on Amorphous Supports: A Systematic Ab Initio Route to Structure-Property Relationships ................. 247
Baron Peters, Bryan R. Goldsmith, Evan Sanderson, Daniel Bean

(520e) Understanding and Applying Multistate Reweighting in a Broad Molecular Simulation Context ...................................................... 248
Michael R. Shirts, Himanshu Pallwal, John Chodera

(590a) Multi-Scale Theory in the Molecular Simulation of Electrolyte Solutions ......................................................................................... 249
Wei Zhang, Xinli You, Lawrence R. Pratt

(590b) Incorporation of Proton Hopping Mechanism into Dissipative Particle Dynamics ........................................................................................................ 250
Ming-Tsong Lee, Aleksy Vishnyakov, Alexander Y. Neimark

(590c) Surface Tension of Pure Components and Mixtures By Molecular Simulation ......................................................................................... 251
Stephan Werth, Katrin Stöbener, Martin Horsch, Hans Hasse

(590d) Coarse-Grained Simulation of dsDNA-Dendrimer Complex Formation ................................................................................................. 252
Shi Yu, Ronald G. Larson

(590f) From Feedstock to Final Product: Toward Molecular Dynamics Simulations Encompassing All Stages of Single-Walled Carbon Nanotube Synthesis ......................................................................................... 253
Jonathan E. Mueller, William A. Goddard III

(685a) Improving Intermolecular Force-Fields for Crystal Structure Prediction ................................................................................................. 267
Christina-Anna Gatsiou, Claire S. Adjiman, Constantinos C. Pantelides

(685b) Basis Function Sampling for Material Property Computations ........................................................................................................ 270
Jonathan K. Whitmer, Abhijeet A. Joshi, Chi-cheng Chiu, Juan J. de Pablo

(685c) Vapor Liquid Equilibria of Hydrofluorocarbons Via First Principles Monte Carlo Simulations ......................................................................................... 271
Himanshu Goel, Neeraj Rai

(685d) Development and Application of Ab-Initio Based Force Fields for Noble Gas Adsorption in MOFs ......................................................................................... 272
Hakan Demir, Jeffery A. Greathouse, David S. Sholl

(685e) Prediction of Adsorption and Diffusion Properties of CH4 in Zeolites Using Force Field Derived from DFT-CC Methods ......................................................................................... 273
Rohan Avati, Peter I. Ravikovitch, David Sholl

(685f) Virial Coefficients of Flexible Molecules Using Path Integral Monte Carlo Methods to Capture Nuclear Quantum Effects ......................................................................................... 274
Ramachandran Subramaniam, Andrew J. Schultz, David A. Kofke

(711a) Chemically-Complexing Ionic Liquids for Pre-Combustion CO2 Capture: Design of Chemical Properties ......................................................................................... 275
Bo Hong, Joshua E. Bennett, Joan F. Brennecka, Mark A. Stadther
(711b) Electrospray As a Nanoscale Gas-Liquid Contactor for Carbon Dioxide Absorption in Space Habitats
Matthew Paragano

(711c) Developing a Model for Carbon Dioxide Using the Modified Group Contribution-SAFT-VR with Dipole Theory
Jessica D. Haley, Gaurav Das, Clare McCabe

(711d) Development of a Group Contribution Methodology for Multi-Functional Amines in the Context of Carbon Capture Applications
Alexandros Chremos, Esther Forte, Vassilis Papaioannou, Amparo Galindo, George Jackson, Claire Adjiman

(711e) Associated Lattice Fluid Equation of State for CO2 – Polymer Systems
Mohammad Z. Hossain, Yanhui Yuan, Amyn S. Teja

(711f) Kinetic Study of Carbon Dioxide Absorption By Aqueous Solutions of N-Methyldiethanolamine and Piperazine
Alberto Servia, Nicolas Laloue, Julien Grandjean, Sabine Rode, Christine Roizard

(711g) CO2 Absorption into Solutions of Amino-2-Methyl-1-Propanol (AMP) Mixed with Piperazine and Glycine
Abdelbaki Benamor, Mohammed Jaber Almarri

(731a) Restraint-Free Coarse-Grain Modeling of a Crystalline Cellulose Fibril Based on Force Matching
Sergiy Markutsya, Ajitha Devarajan, Mark S. Gordon, Theresa L. Windus, Monica H. Lamm

(731b) Ligand Binding Dynamics and Directionality in Cellulomonas Fimi Family 4 Carbohydrate Binding Modules
Abhishek A. Kognole, Christina M. Payne

(731c) Understanding the Interactions of N-Methylmorpholine N-Oxide with Cellulose
Brooks D. Rabideau, Ahmed E. Ismail

(731d) Transport of Pyrolysis Fragments in Cellulose – a Molecular Dynamics Study
Abdul Salam Mohammad, Jessica D. Murillo, Joseph J. Biernacki, Scott Northrup

(731e) A Comparison of Coarse-Graining Approaches for Modeling Morphology in Push-Pull Polymers
Eric Jankowski, Dana Olson

(731f) Molecular Properties for Renewable Energy Materials from Big Data
Johannes Hachmann
