2014 ISLPED Organization ........................................................................................................................................... xi

ISLPED 2014 Sponsors & Supporters ............................................................................................................................ xvi

**Keynote Address**
Session Chair: Yuan Xie (University of California, Santa Barbara)
- **Low Power Design Techniques in Mobile Processes** ................................................................. 1
  Karim Arabi (Qualcomm Technologies, Inc.)

**Session: Photonics, Spintronics, Approximate Computing and Front-end Throttling**
Session Chairs: Hans Jacobson (IBM) and Umit Ogras (Arizona State University)
- **EcoLaser: An Adaptive Laser Control for Energy-Efficient On-Chip Photonic Interconnects** ................................................................. 3
  Yigit Demir, Nikos Hardavellas (Northwestern University)
- **A Model for Array-based Approximate Arithmetic Computing with Application to Multiplier and Squarer Design** ......................................................... 9
  Botang Shao, Peng Li (Texas A&M University)
- **SPINDLE: SPINtronic Deep Learning Engine for Large-scale Neuromorphic Computing** ...................................................................................... 15
  Shankar Ganesh Ramasubramanian, Rangharajan Venkatesan, Mrigank Sharad, Kaushik Roy, Anand Raghunathan (Purdue University)
- **Adaptive Front-End Throttling for Superscalar Processors** ............................................................... 21
  Wei Zhang, Hang Zhang, John Lach (University of Virginia)

**Session: Approximate Computing and Quality Driven Power-aware System Design**
Session Chairs: Xiangyu Dong (Qualcomm) and Vivek Joy (Intel)
- **AxNN: Energy-Efficient Neuromorphic Systems Using Approximate Computing** ....................... 27
  Swagath Venkataramani, Ashish Ranjan, Kaushik Roy, Anand Raghunathan (Purdue University)
- **TONE: Adaptive Temperature Optimization for the Next Generation Video Encoders** ................. 33
  Daniel Palomino (Federal University of Rio Grande do Sul), Muhammad Shafique (Karlsruhe Institute of Technology), Altamiro Susin (Federal University of Rio Grande do Sul), Jörg Henkel (Karlsruhe Institute of Technology)
- **StoRM: A Stochastic Recognition and Mining Processor** ............................................................................. 39
  Vinay K. Chippa, Swagath Venkataramani, Kaushik Roy, Anand Raghunathan (Purdue University)
- **Approximate Compressed Sensing: Ultra-Low Power Biosignal Processing via Aggressive Voltage Scaling on a Hybrid Memory Multi-core Processor** .............................................. 45
  Daniele Bortolotti (University of Bologna), Hossein Mamaghanian (École Polytechnique Fédérale de Lausanne), Andrea Bartolini (University of Bologna), Maryam Ashouei, Jan Stuijt (Holst Centre/imec), David Atienza, Pierre Vandergheynst (École Polytechnique Fédérale de Lausanne), Luca Benini (University of Bologna)

**Session: Emerging Technologies**
Session Chairs: Arijit Raychowdhury (Georgia Institute of Technology) and Patrick Mercier (University of California, San Diego)
- **An On-Chip Autonomous Thermoelectric Energy Management System for Energy-Efficient Active Cooling** .................................................................................. 51
  Borislav Alexandrov, Khondker Z. Ahmed, Saibal Mukhopadhyay (Georgia Institute of Technology)
• Tunnel FET-Based Ultra-Low Power, Low-Noise Amplifier Design for Bio-Signal Acquisition ................................................................. 57
  Huichu Liu (Pennsylvania State University), Mahsa Shoaran (Swiss Federal Institute of Technology (EPFL)), Xueqing Li, Suman Datta (Pennsylvania State University), Alexandre Schmid (Swiss Federal Institute of Technology (EPFL)), Vijaykrishnan Narayanan (The Pennsylvania State University)

• Performance Modeling for Emerging Interconnect Technologies in CMOS and Beyond-CMOS Circuits ......................................................... 63
  Sou-Chi Chang, Ahmet Ceyhan, Vachan Kumar, Azad Naeemi (Georgia Institute of Technology)

Session: Energy-efficient Systems using Emerging Non-Volatile Memory Technologies
Session Chairs: Vijay Raghunathan (Purdue University) and Zhenyu Sun (Broadcom)

• Making B⁺-Tree Efficient in PCM-Based Main Memory .................................................. 69
  Ping Chi, Wang-Chien Lee, Yuan Xie (Pennsylvania State University)

• Sleep-Aware Variable Partitioning for Energy-Efficient Hybrid PRAM and DRAM Main Memory ................................................................. 75
  Chencen Fu, Mengying Zhao, Chun Jason Xue (City University of Hong Kong), Alex Oraloglou (University of California, San Diego)

• DR. Swap: Energy-Efficient Paging for Smartphones ..................................................... 81
  Kan Zhong, Xiao Zhu, Tianzheng Wang (University of Toronto), Dan Zhang, Xianlu Luo, Duo Liu, Weichen Liu, Edwin H.-M. Sha (Chongqing University)

Session: Clock and IO Circuit Techniques
Session Chairs: Gordon Gammie (MediaTek) and Jie Gu (Maxlinear)

• Quasi-Resonant Clocking: A Run-Time Control Approach for True Voltage-Frequency-Scalability ......................................................... 87
  Visvesh Sathe (University of Washington, Seattle)

• An Energy-Efficient 2.5D Through-Silicon Interposer I/O with Self-Adaptive Adjustment of Output-Voltage Swing ........................................... 93
  Dongjun Xu (Nanyang Technological University & Xi’an University of Technology), Sai Manoj P. D., Hantao Huang (Nanyang Technological University), Ningmei Yu (Xi’an University of Technology), Hao Yu (Nanyang Technological University)

• Reconfigurable Regenerator-based Interconnect Design for Ultra-Dynamic-Voltage-Scaling Systems ......................................................... 99
  Seongjong Kim, Mingoo Seok (Columbia University)

Session: Thermal-Aware Design: From Device to System
Session Chairs: Jiang Hu (Texas A&M University) and Umit Ogras (Arizona State University)

• Dynamic Thermal Management for FinFET-Based Circuits Exploiting the Temperature Effect Inversion Phenomenon ........................................ 105
  Woojoo Lee, Yanzhi Wang, Tiansong Cui, Shahin Nazarian, Massoud Pedram (University of Southern California)

• Buffered Clock Tree Synthesis Considering Self-Heating Effects ................................ 111
  Chung-Wei Lin (University of California, Berkeley), Tzu-Hsuan Hsu, Xin-Wei Shih (National Taiwan University), Yao-Wen Chang (National Taiwan University & Academia Sinica)

• Therminator: A Thermal Simulator for Smartphones Producing Accurate Chip and Skin Temperature Maps ............................................ 117
  Qing Xie, Mohammad Javad Dousti, Massoud Pedram (University of Southern California)
Industry Special Session
Session Chair: Muhammad Khellah (Intel)

- Challenges in Low-Power Analog Circuit Design for sub-28nm CMOS Technologies ...... 123
  Amr Fahim (Semtech Corporation)

- Process and Design Solutions for Exploiting FD-SOI Technology Towards Energy Efficient SOCs ................................................................................................................. 127
  Philippe Flatresse (STMicroelectronics)

- Unified Embedded Non-Volatile Memory for Emerging Mobile Markets .................. 131
  Kangho Lee, Jimmy J. Kan, Seung H. Kang (Qualcomm Technologies Incorporated)

Embedded Tutorial
Session Chairs: Massimo Poncino (Politecnico di Torino) and Renu Mehra (Synopsys)

- Failing to Fail - Achieving Success in Advanced Low Power Design Using UPF ............. 137
  Rick Koster (Mentor Graphics), Sushma Honnavara Prasad (Broadcom Corporation),
  Shreedhar Ramachandra (Synopsys)

Keynote Address
Session Chair: Tanay Karnik (Intel)

- Accelerator-Rich Architectures — From Single-chip to Datacenters ............................ 139
  Jason Cong (University of California, Los Angeles)

Session: GPU Voltage Noise, Uncore Power Modeling, Memory Power Management, and Testing
Session Chairs: John Sampson (Penn State University) and Yaojun Zhang (Qualcomm)

- GPUVolt: Modeling and Characterizing Voltage Noise in GPU Architectures .............. 141
  Jingwen Leng, Yazhou Zu, Minsoo Rhu (The University of Texas at Austin),
  Meeta Gupta (IBM T.J. Watson Research Center), Vijay Janapa Reddi (The University of Texas at Austin)

- Empirically Derived Abstractions in Uncore Power Modeling for a Server-Class Processor Chip ........................................................................................................... 147
  Hans Jacobson (IBM T.J. Watson Research Center),
  Arun Joseph, Dharmesh Parikh (IBM Systems & Technology Group),
  Pradip Bose, Alper Buyuktosunoglu (IBM T.J. Watson Research Center)

- Content-Driven Memory Pressure Balancing and Video Memory Power Management for Parallel High Efficiency Video Coding .................................................. 153
  Felipe Sampaio (Federal University of Rio Grande do Sul),
  Muhammad Shafique (Karlsruhe Institute of Technology), Bruno Zatt (Federal University of Pelotas),
  Sergio Bampi (Federal University of Rio Grande do Sul), Jörg Henkel (Karlsruhe Institute of Technology)

- Software Canaries: Software-based Path Delay Fault Testing for Variation-aware Energy-Efficient Design ....................................................................................... 159
  John Sartori (University of Minnesota), Rakesh Kumar (University of Illinois at Urbana-Champaign)

Session: CAD for Low Power and Reliability
Session Chairs: Zhiru Zhang (Cornell University) and Yiran Chen (University of Pittsburgh)

- Algorithms for Power-Efficient QoS in Application Specific NoCs ............................. 165
  Hao He, Gongming Yang, Jiang Hu (Texas A&M University)

- Design and CAD Methodologies for Low Power Gate-level Monolithic 3D ICs ............ 171
  Shreepad Panth (Georgia Institute of Technology), Kambiz Samadi, Yang Du (Qualcomm Research),
  Sung Kyu Lim (Georgia Institute of Technology)
• Efficient NBTI Modeling Technique Considering Recovery Effects ........................................ 177
  Reef Eilers, Malte Metzdorf, Domenik Helms (OFFIS Institute for Computer Science),
  Wolfgang Nebel (University of Oldenburg)

• Bridging High Performance and Low Power in Processor Design ........................................... 183
  Ruchir Puri, Mihir Choudhury, Haifeng Qian, Matthew Ziegler (IBM T.J. Watson Research Center)

Session: Energy Efficient Digital Circuit Techniques
Session Chairs: Rob Gilmore (Qualcomm) and Joyce Kwong (TI)
• CASA: Correlation-Aware Speculative Adders .............................................................................. 189
  Gai Liu, Ye Tao, Mingxing Tan, Zhiru Zhang (Cornell University)

• Synergistic Circuit and System Design for Energy-Efficient and Robust Domain
  Wall Caches ................................................................................................................................. 195
  Seyedhamidehra Motaman, Anirudh Iyengar, Swaroop Ghosh (University of South Florida)

• Timing Errors in LPDC Decoding Computations with Overscaled Supply Voltage ................. 201
  Behnam Sedighi (University of Notre Dame),
  N. Prasanth Anthapadmanabhan, Dusan Suvakovic (Bell Labs, Alcatel-Lucent)

Session: Optimizing Computation and Communication in Mobile Systems
Session Chairs: Sujit Dey (University of California, San Diego) and Yiran Chen (University of Pittsburgh)
• A Case for Leveraging 802.11p for Direct Phone-to-Phone Communications ......................... 207
  Pilsoon Choi, Jason Gao (Massachusetts Institute of Technology),
  Nadesh Ramanathan, Mengda Mao, Shipeng Xu, Chirm-Chye Boon, Suhaim A. Fahmy
  (Nanyang Technological University), Li-Shiuan Peh (Massachusetts Institute of Technology)

• Leakage Mitigation Techniques in Smartphone SoCs ................................................................. 213
  John Redmond (Broadcom)

Session: Voltage Reference and Power Converter Circuits
Session Chairs: Swaroop Ghosh (University of Florida) and Nilanjan Banerjee (Qualcomm)
• 2.3 ppm/°C 40 nW MOSFET-Only Voltage Reference .............................................................. 215
  Oscar E. Mattia, Hamilton Klimach, Sergio Bampi (Federal University of Rio Grande do Sul)

• A Bipolar ±40 mV Self-Starting Boost Converter with Transformer Reuse
  for Thermoelectric Energy Harvesting ............................................................................................ 221
  Nachiket V. Desai (Massachusetts Institute of Technology), Yogesh K. Ramadass (Texas Instruments, Inc.),
  Anantha P. Chandrakasan (Massachusetts Institute of Technology)

• Impact of Process Variation in Inductive Integrated Voltage Regulator on Delay
  and Power of Digital Circuits ........................................................................................................... 227
  Monodeep Kar, Sergio Carlo (Georgia Institute of Technology),
  Harish K. Krishnamurthy (Intel Corporation), Saiibal Mukhopadhyay (Georgia Institute of Technology)

Session: Variation and Reliability Consideration for Low-Power Systems
Session Chairs: Eli Bozorgzadeh (University of California, Irvine) and Youghyun Kim (Purdue University)
• Aging Mitigation of Power Supply-Connected Batteries ............................................................ 233
  Jaemin Kim (Seoul National University), Alma Pröbstl, Samarjit Chakraborty (Technische Universität München),
  Naehyuck Chang (Seoul National University)

• Variation Tolerant Design of a Vector Processor for Recognition, Mining
  and Synthesis ............................................................................................................................... 239
  Vivek Kozhikkottu, Swagath Venkataramani, Anand Raghunathan (Purdue University),
  Sujit Dey (University of California, San Diego)

• Thermal-Aware Layout Planning for Heterogeneous Datacenters .............................................. 245
  Reza Azimi, Xin Zhan, Sherief Reda (Brown University)
Poster Session

- QPR.js: A Runtime Framework for QoS-Aware Power Optimization for Parallel JavaScript Programs .......................................................... 251
  Wonjun Lee (Samsung Electronics & Sungkyunkwan University), Channoh Kim (Sungkyunkwan University), Houp Song (Samsung Electronics), Jae W. Lee (Sungkyunkwan University)

- Ultra-Low Voltage Mixed TFET-MOSFET 8T SRAM Cell .................................................. 255
  Yin-Nien Chen, Ming-Long Fan, Vita Pi-Ho Hu, Pin Su, Ching-Te Chuang (National Chiao-Tung University)

- a-SAD: Power Efficient SAD Calculator for Real Time H.264 Video Encoder Using MSB-Approximation Technique ............................................ 259
  Le Dinh Trang Dang, Ik Joon Chang, Jinsang Kim (Kyunghee University)

- Design Exploration of Racetrack Lower-level Caches .......................................................... 263
  Zhenyu Sun (Broadcom Corporation), Xiuyuan Bi, Alex K. Jones, Hai Li (University of Pittsburgh)

- A Compact Macromodel for the Charge Phase of a Battery with Typical Charging Protocol ........................................................................... 267
  Donghwa Shin (Yeungnam University), Alessandro Sassone, Alberto Bocca, Alberto Macii, Enrico Macii, Massimo Poncino (Politecnico di Torino)

- Energy Efficient Task Scheduling on a Multi-Core Platform Using Real-Time Energy Measurements ........................................................................... 271
  Dvigvijay Singh, William J. Kaiser (University of California, Los Angeles)

- Energy-Efficient Mapping of Biomedical Applications on Domain-Specific Accelerator under Process Variation .................................................. 275
  Mohammad Khvare Tavana (George Mason University), Amey Kulkarni (University of Maryland), Abbas Rahimi (University of California, San Diego), Tinoosh Mohsenin (University of Maryland), Houman Homayoun (George Mason University)

- A Memory Rename Table to Reduce Energy and Improve Performance ........................................... 279
  Joseph Pusdesris, Benjamin VanderSloot, Trevor Mudge (University of Michigan)

- A Deterministic-Dither-Based, All-Digital System for On-chip Power Supply Noise Measurement ........................................................................... 283
  Kannan Sankaragomathi, William Smith, Brian Otis, Visvesh Sathe (University of Washington, Seattle)

  Sara Vinco, Alessandro Sassone (Politecnico di Torino), Franco Fummi (University of Verona), Enrico Macii, Massimo Poncino (Politecnico di Torino)

- Analysis and Optimization of In-Situ Error Detection Techniques in Ultra-Low-Voltage Pipeline ........................................................................... 291
  Seongjung Kim, Mingoo Seok (Columbia University)

- Quantifying the Impact of Variability on the Energy Efficiency for a Next-Generation Ultra-green Supercomputer ........................................... 295
  Francesco Fraternali, Andrea Bartolini (University of Bologna), Carlo Cavazzoni (SCAI, CINECA), Giampietro Tecchio (Eurotech SpA), Luca Benini (University of Bologna)

- MIN: A Power Efficient Mechanism to Mitigate the Impact of Process Variations on Nanophotonic Networks ........................................... 299
  Majed Valad Beigi, Gokhan Memik (Northwestern University)

- EECache: Exploiting Design Choices in Energy-Efficient Last-Level Caches for Chip Multiprocessors .............................................................. 303
  Hsiang-Yun Cheng, Matt Pomplona, Narges Shahidi, Ivan Stalev, Mary Jane Irwin, Mahmut Kandemir, Jack Sampson, Yuan Xie (The Pennsylvania State University)

- A Digital Dynamic Write Margin Sensor for Low Power Read/Write Operations in 28nm SRAM .............................................................. 307
  Benton H. Calhoun, Peter Beshay (University of Virginia), Vikas Chandra, Rob Aitken (ARM Inc)
• Smart Butterfly: Reducing Static Power Dissipation of Network-on-Chip with Core-State-Awareness .................................................................................................................. 311
Siyu Yue, Lizhong Chen, Di Zhu, Timothy M. Pinkston, Massoud Pedram (University of Southern California)

• Energy-Efficient Dot Product Computation Using a Switched Analog Circuit Architecture ................................................................................................................................. 315
Ihab Nahlus, Eric P. Kim, Naresh R. Shanbhag (University of Illinois), David Blaauw (University of Michigan)

• Gated Low-Power Clock Tree Synthesis for 3D-ICs .......................................................................................................................................................................................... 319
Tiantao Lu, Ankur Srivastava (University of Maryland)

• Unlocking the True Potential of 3D CPUs with Micro-Fluidic Cooling ......................................................................................................................... 323
Caleb Serafy, Ankur Srivastava, Donald Yeung (University of Maryland)

• Prolonging PCM Lifetime Through Energy-Efficient, Segment-Aware, and Wear-Resistant Page Allocation ......................................................................................... 327
Hoda Aghaei Khouzani, Yuan Xue, Chengmo Yang, Archana Pandurangi (University of Delaware)

Keynote Address
Session Chairs: Muhammad Khellah (Intel) and Renu Mehra (Synopsys)

• The New (System) Balance of Power and Opportunities for Optimizations ......................................................................................................................... 331
Parthasarathy Ranganathan (Google)

Session: Energy Efficient Cache and Memory Design
Session Chairs: Xi Chen (Qualcomm) and Zhenyu Sun (Broadcom)

• eDRAM-Based Tiered-Reliability Memory with Applications to Low-Power Frame Buffers .................................................................................................................... 333
Kyungsang Cho, Yongjun Lee (Samsung Electronics & Sungkyunkwan University), Young H. Oh, Gyoo-cheol Hwang (Samsung Electronics), Jae W. Lee (Sungkyunkwan University)

• Enabling High-Performance LPDDRx-Compatible MRAM .......................................................................................................................... 339
Jue Wang (The Pennsylvania State University), Xiangyu Dong (Qualcomm Technologies, Inc.), Yuan Xie (The Pennsylvania State University)

• SBAC: A Statistics Based Cache Bypassing Method for Asymmetric-access Caches ....345
Chao Zhang, Guangyu Sun (Peking University), Peng Li (University of California, Los Angeles), Tao Wang (Peking University), Dimin Niu (The Pennsylvania State University), Yiran Chen (University of Pittsburgh)

• Tag Check Elision .................................................................................................................................................................................... 351
Zhong Zheng, Zhiying Wang (National University of Defense Technology), Mikko Lipasti (University of Wisconsin-Madison)

Session: Energy Harvesting and Energy-aware System Design
Session Chairs: Naehyuck Chang (Seoul National University) and Hyung Gyu Lee (Daegu University)

• Fast Photovoltaic Array Reconfiguration for Partial Solar Powered Vehicles .......................................................... 357
Jaemin Kim (Seoul National University), Yanzhi Wang, Massoud Pedram (University of Southern California), Naehyuck Chang (Seoul National University)

• Energy Harvesting From Anti-Corrosion Power Sources .......................................................................................................................... 363
Sehwon Kim, Minseok Lee (Dankook University), Pai H. Chou (University of California, Irvine)

• Intelligent Frame Refresh for Energy-Aware Display Subsystems in Mobile Devices ......369
Yongbing Huang, Mingyu Chen, Lixin Zhang (Chinese Academy of Sciences), Shihai Xiao, Junfeng Zhao, Zhulin Wei (Huawei Technologies Co., Ltd.)

• Powering the Internet of Things .................................................................................................................................................................................... 375
Hrishikesh Jayakumar, Kangwoo Lee, Woo Suk Lee, Arnab Raha, Younghyun Kim, Vijay Raghunathan (Purdue University)

Author Index ............................................................................................................................................... 381
