2015 IEEE Conference on Computational Intelligence in Bioinformatics and Computational Biology (CIBCB 2015)

Niagara Falls, Ontario, Canada
12 – 15 August 2015
Table of Contents:

Detecting Protein Complexes using Gene Expression Biclusters - Eileen Marie Hanna and Nazar Zaki .................. 1

Heuristic Principal Component Analysis Based unsupervised Feature Extraction and its Application to Gene Expression Analysis of Amyotrophic Lateral Sclerosis - Y-h. Taguchi, Mitsuo Iwadate and Hideaki Umeyama ................................................................. 8

Digitization of Trait Representation in Microarray Data Analysis of Wheat Infected by Fusarium graminearum - Youlian Pan, Therese Ouellet, Sieu Phan, Alain Tchangag, Francois Fauteux and Dan Tulpan .............................. 18

Towards Large Scale Genetic Network Modeling - Rubaiya Rahtin Khan and Madhu Chetty .............................. 27

Lexicode Crossover for Embeddable Biomarkers - Daniel Ashlock and Sheridan Houghten .............................. 35

Systematic Bone Infection Detection in Axial Diabetic Foot MRI - Maede Maftouni, Mohammad hossein Fazel Zarandi, Burhan Turksen and Niloofar Ayubi Yazdi ................................................................. 42

Lung Nodule Diagnosis from CT Images Based on Ensemble Learning - Farzad Vasheghani Farahani, Abbas Ahmadi and Mohammad hossein Fazel Zarandi ............................................................................. 47

Semi-Automated Patient-Specific Scalp EEG Seizure Detection with Unsupervised Machine Learning - Otis Smart and Michael Chen .................................................................................................................. 54

Classification via Correlation-based Feature Grouping - Mina Maleki and Luis Rueda ...................................... 61

A Novel Gene Selection Algorithm for cancer identification based on Random Forest and Particle Swarm Optimization - Elnaz Pashaei, Mustafa Ozen and Nizamettin Aydin ................................................................. 67

New Approaches to Identify Cancer Heterogeneity in DNA Methylation Studies Using the Lepage Test and Multinomial Logistic Regression - Seongkeon Lee, Youngjun Piao, Huidong Shi and Jeong-Hyeon Choi .......... 73

Stress and Productivity Performance in the Workforce Modelled with Binary Decision Automata - Matthew Page and Daniel Ashlock .................................................................................................................. 80

FragGeneScan-Plus for scalable high-throughput short-read open reading frame prediction - Dongjae Kim, Aria Hahn, Shang-Ju Wu, Niels Hanson, Kishori Konwar and Steven Hallam ............................................................................. 88

A Comparison of Incremental Community Assembly with Evolutionary Community Selection - Daniel Ashlock and Meghan Timmins ........................................................................................................ 96

Assembly independent functional annotation of short-read data using SOFA: Short-ORF Functional Annotation - Aria Hahn, Niels Hanson, Dongjae Kim, Kishori Konwar and Steven Hallam .................................................. 104

Varying Decision Inputs in Prisoner’s Dilemma - Lee-Ann Barlow and Daniel Ashlock ...................................... 110

Protein Secondary Structure Prediction Using an Evolutionary Computation Method and Clustering - Masood Zamani and Kremer Stefan ........................................................................................................... 118

Taenia Biomolecular Phylogeny and the Impact of Mitochondrial Genes on this Latter - Huda Al-Nayyef, Christophe Guyeux and Jacques M. Bahi .................................................................................................. 124

Protein Structure Similarity using Recurrence Relation Technique - S. Jahnavi Somavarapu, Dr. K. Suvarna Vani Koneru and Praveen Kumar Kollu ........................................................................................................ 131

LargeDEL: A Tool for Identifying Large Deletions in the Whole Genome Sequencing Data - Pinar Kavak and Huseyn Demirci ................................................................................................................ 138

Novel Domain Identification Approach for Protein-Protein Interaction Prediction - Maad Shatnawi and Nazar Zaki ............................................................................................................................... 145

TSC_ATP: A Two-Stage Classifier For Predicting Protein-ATP Binding Sites From Protein Sequence - Bryan Andrews and Jing Hu ............................................................................................................... 153

Analysis of Gene Mutation that cause Lung Cancer by using Data mining and Study of Common Remedy - Chaewon Ham, Jiwoo Kim, Seo jung Ahn, Yebin Kim, Sewon Kim and Tae seon Yoon ........................................................................... 158

Prediction of High-Throughput Protein-Protein Interactions based on Protein Sequence Information - Yixun Li, Behzad Rezaei, Alioune Ngom and Luis Rueda .................................................................................. 163

The impact of particles initialization in PSO: parameter estimation as a case in point - Paolo Cazzaniga, Marco S. Nobile and Daniela Besozzi ........................................................................................................ 169
Interactive Evolution Instead of Default Parameters - Daniel Ashlock, Cameron McGuinness and Joseph O'Neill ................................................................. 177

On predicting transport proteins and their substrates for the reconstruction of metabolic networks - Faizah Aplo and Gregory Butler ................................................................................................. 185

A Neural Network Approach to Retinal Layer Boundary Identification From Optical Coherence Tomography Images - Kevin McDonough, Ilya Kolmanovsky and Inna Glybina ................................................................. 194

Dimensionality Reduction Approach for Genotypic Data - Luluah Al-Husain and Alaaeldin Hafez ................................................................. 202

Reconstruction of a GRN model of salt stress response in Arabidopsis using genetic algorithms - Gonzalo Ruz, Tania Timmermann and Eric Goles ................................................................. 207

An Information Extraction System for Protein Function Prediction - Kamal Taha and Paul Yoo ................................................................. 215

An Intelligent Multi-Agent System Architecture for enhancing Self-Management of Type 2 Diabetic Patients - Zahra Darabi, Saba Shokoohisogli, Mohammadhosein Fazel Zarandi and Burhan Turksen ................................................................. 222

Analysis of Cell Migration Patterns in Time Lapse Microscopy Using Texture Features - Jiang Ching-Fen, Chiu Tseng-Shiang and Tsai Ming-Hong ................................................................. 230

A Complexity Measurement for de novo Protein Folding - Michael Brown, Olivia Hua and James Coker ................................................................. 235

A Novel Approach for Finding Informative Genes in Ten Subtypes of Breast Cancer - Forough Firoozbakht, Iman Rezaeian, Lisa Porter, Alioune Ngom and Luis Rueda ................................................................. 243

Hybrid Feature Selection Methods for Online Biomedical Publication Classification - Long Ma, Yanqing Zhang, Raj Sunderraman, Peter T. Fox, Angela R. Laird, Jessica A. Turner and Matthew D. Turner ................................................................. 249

Predicting Time Sequences in Gene expression Using Dynamic Neuro-fuzzy Networks - Ali Ahmadi and Sadaf Iranpour Tari ....................................................................................................................................... 257

Genetic Operators Based on Backbone Constraint Angles for Protein Structure Prediction - Karina Santos, Fabio Custodio, Helio Barbosa and Laurent Dardenne ......................................................................................... 263

Classification of RNA sequences with pseudoknots using features based on partial sequences - Kwok-Kit Tong, Kwan-Yau Cheung, Kin-Hong Lee and Kwong-Sak Leung ......................................................................................... 271

A Multiobjective Approach for Protein Structure Prediction Using a Steady-State Genetic Algorithm with Phenotypic Crowding - Gregorio Rocha, Fabio Custodio, Helio Barbosa and Laurent Dardenne ......................................................................................... 279

Side-Chain Flexibility in Protein Docking - Hui Liu, Feng Lin, Jianli Yang and Xiuling Liu ......................................................................................... 287

O-glycosylation Sites Prediction using the Meta-Prediction Approach - Wei-Fu Lu and Yi-Hou Chen ......................................................................................... 295

A Biomarker Ensemble Ranking Framework for Prioritizing Depression Candidate Genes - Abu Chowdhury, Md Alam and Yanqing Zhang ......................................................................................... 300

Evolutionary Computation for Disease Gene Association - Ashkan Entezari Heravi, Koosha Tahmasebipour and Sheridan Houghten ......................................................................................... 306

A Study of Comparing the Ambiguity of Existing Virus Taxonomy Structures Using Protein's Region Names in the Vector Space Model - Jing-Doo Wang ......................................................................................... 314

REFBSS: Reference Based Similarity Search in Biological Network Databases - Arda Soylev and Osman Abul ....................................................................................................................................... 322

Significance Testing for Variable Selection in High-Dimension - Jean-Michel Becu, Christophe Ambroise, Cyril Dalmasso and Yves Grandvalet ......................................................................................... 330

A Benchmark for Automated Peak Picking of Protein NMR Spectra - Piotr Klukowski, Adam Gonczarek and Michał Walczak ......................................................................................... 338

A High-Speed Real-Time Nanopore Signal Detector - Yiyun Huang, Sebastian Magierowski, Ebrahim Ghafar-Zadeh and Chengjie Wang ......................................................................................... 346

Fuzzy Rule-based Expert System for Diagnosis of Thyroid Disease - Sajjad Amrollahi Biyouki, Mohammad Hossein Fazel Zarandi and Ismail Burhan Turksen ......................................................................................... 354

Dynamic Ensemble Selection with Local Expertise Consistency - Yun Zhu, Yanqing Zhang and Yi Pan ......................................................................................... 361
Identifying Differentially Expressed Transcripts Associated with Prostate Cancer Progression using RNA-Seq and Machine Learning Techniques - Siva Singireddy, Abed Alkhateeb, Iman Rezaeian, Dora Cavallo-Medved, Lisa Porter and Luis Rueda ................................................................................................................ 369

Inferring the Dynamics of Gene Regulatory Networks via Optimized Recurrent Neural Network and Dynamic Bayesian Network - Arinze Akutekwe and Huseyin Seker .................................................................................. 374

Bridging the Multiscale Gap: Identifying Cellular Parameters from Multicellular Data - Qanita Bani Baker, Gregory J. Podgorski, Christopher D. Johnson, Elizabeth Vargis and Nicholas S. Flann ........................................ 382

Matching Models of HIV-1 Viral Dynamics to Clinical Data - Andrew Adams, Zabrina Brumme, Alexander Rutherford and Ralf Wittenberg ................................................................................................................. 389

Iterative learning cascaded multiclass kernel based support vector machine for neural spike data classification - Amir Zjajo and Rene van Leuken .................................................................................................................. 397

Multimodal Medical Image Registration Using Particle Swarm Optimization with Influence of the Data's Initial Orientation - Lydia Schwab, Manuel Schmitt and Rolf Wanka ...................................................... 403

Evolving DNA Classifiers with Extinction Based Ring Optimization - Daniel Ashlock, Sierra Gillis, Jennifer Garner and Gary Fogel .................................................................................................................. 411

On Side Effect Machines as a Representation for Evolutionary Algorithms - Joseph Brown ................................................................................................................................. 419

Chaos Automata for Sequence Visualization - Daniel Ashlock, Cameron McGuinness and Wendy Ashlock ...... 427

A Multi-objective Approach to Evolving Artificial Neural Networks for Coronary Heart Disease Classification - Alex Shenfield and Shahin Rostami ............................. 427

Using Multi-Objective Genetic Programming to Evolve Stochastic Logic Gate Circuits - Brian Ross ................. 435

A Visual Spreadsheet using HTML5 for Whole Genome Display - Nada Alhirabi and Gregory Butler .................. 451

Association Rule Mining of Gene Ontology Annotation Terms for SGD - Anurag Nagar, Michael Hahsler and Hisham Al-Mubaid .................................................................................................................. 458

A Hybrid Semantic Similarity Measure for Gene Ontology Based On Offspring and Path Length - Anurag Nagar and Hisham Al-Mubaid ................................................................................... 465

Exploiting Information Content and Semantics to Accurately Computing Similarity of GO-based Annotated Entities - Ignacio Traverso-Ribon and Maria-Esther Vidal .................................................................................. 472

Exploiting Modularity and Hierarchical Modularity to Infer Large Causal Gene Regulatory Network - Leung-Yau Lo, Man-Leung Wong, Kin-Hong Lee and Kwong-Sak Leung ............................. 480

Automated Classification of Author's Sentiments in Citation Using Machine Learning Techniques: A Preliminary Study - In Cheol Kim and George Thoma ........................................................................... 488

Predicting Cassette Exons Using Transductive Learning Approaches - Ana Stanescu and Doina Caragea ........... 495

Sorting the Phenotypic Heterogeneity of Autism Spectrum Disorders: a Hierarchical Clustering Model - Tayo Obafemi-Ajayi, Dao Lam, T. Nicole Takahashi, Stephen Kanne and Donald Wunsch ........................................... 503

Granular Computing Approach for the Design of Medical Data Classification Systems - Mohammed Al- Shammaa and Maysam F. Abbod ........................................................................................................ 510
