### WS01 Toward the Next Generation of Urban Mobility I

**Discovering MARS: A Mobility Aware Recommender System** ........................................ 1
*Ricardo Leal, Pedro Maurício Costa, and Teresa Galvão*

**Exploring Ticketing Approaches Using Mobile Technologies: QR Codes, NFC and BLE** .................................................. 7
*Rui Couto, João Leal, Pedro Maurício Costa, and Teresa Galvão*

**New Methods of Trip Planning for Travelers of Advanced Public Transport** ........................................... 13
*Agostino Nuzzolo, Comi Antonio, and Luca Rosati*

**Improving Public Transport Decision Making, Planning and Operations by Using Big Data: Cases from Sweden and the Netherlands** ............................................. 19
*Niels van Oort and Oded Cats*

---

### WS03 Advanced Traffic Signal Systems on the Crossroads between Past and Future I

**VITAL: A Simulation-Based Assessment of New Traffic Light Controls** ........................................... 25
*Jakob Erdmann, Robert Oertel, and Peter Wagner*

**An Investigation of SPSA for Signal Timing Optimization at Isolated Intersections** .............................................. 30
*David Hale, Constantinos Antoniou, Byungkyu Brian Park, Jiaqi Ma, Lei Zhang, and Alexander Paz*
Real-Time Signal Control in Developing Cities: Challenges and Opportunities ......................................................38
Fatih Gundogan

**WS12 COSSMO — Cooperative Sensing for Smart Mobility I**

An Infrastructure for Integrated Management of Urban Railway Crossing Areas ..................................................42
Massimo Magrini, Davide Moroni, Giovanni Palazzese, Gabriele Pieri, Ovidio Salvetti, Daniele Azzarelli, and Antonio Spada

Managing Security in Intelligent Transport Systems ............................................................................................48
Ulrich Lang and Rudolf Schreiner

A Neuro-fuzzy Based Approach to Cooperative Ramp Metering ........................................................................54
Martin Gregurić, Edouard Ivanjko, and Sadko Mandžuka

**WS02 Advancements in Multimodal Traffic Modeling, Monitoring and Control I**

Mitigating Bunching with Bus-following Models and Bus-to-Bus Cooperation ..................................................60
Konstantinos Ampountolas and Malcolm Kring

A Transit Signal Priority Algorithm under Connected Vehicle Environment .......................................................66
Kaidi Yang, S. Ilgin Guler, and Monica Menendez

Eco-Routing Using V2I Communication: System Evaluation ..............................................................................71
Ahmed Elbery, Hesham Rakha, Mustafa Elnainay, Wassim Drira, and Fethi Filali

**WS06 Data-Enabled Advancements in Transportation Theory and Application I**

Variable Speed Limits Model to Minimize Confliction without Change in Total Travel Time Using Queuing Theory ..................................................................................................................77
Junhyung Lee, Jayun Huh, and Bongsoo Son

**WS14 Interaction of Automated Vehicles with Other Traffic Participants I**

Pedestrian Intention and Pose Prediction through Dynamical Models and Behaviour Classification ..................................................83
R. Quintero, I. Parra, D. F. Llorca, and M. A. Sotelo

**WS01 Toward the Next Generation of Urban Mobility II**

Urban Logistics Integrated in a Multimodal Mobility System ..............................................................................89
Jorge Freire de Sousa and João Mendes-Moreira

Analysis and Evaluation of Intelligent Bus Rapid Transit Systems in Cyprus .....................................................95
George Papageorgiou, Athanasios Maimaris, and Ioannou Petros

Energy Consumption Estimation in Electric Vehicles Considering Driving Style ................................................101
Jiménez Felipe, Juan Carlos Amarillo, Jose Eugenio Naranjo, Francisco Serradilla, and Alberto Diaz
WS02 Advancements in Multimodal Traffic Modeling, Monitoring and Control II

Vulnerable Road Users Detection Using V2X Communications ..........................................................107
   José J. Anaya, Edgar Talavera, David Giménez, Nuria Gómez, Jiménez Felipe,
   and Jose Eugenio Naranjo

Analysis of the 3D-vMFDs of the Urban Networks of Zurich and San Francisco ..................................113
   Javier Ortigosa, Nan Zheng, Monica Menendez, and Nikolas Geroliminis

WS03 Advanced Traffic Signal Systems on the Crossroads between Past and Future II

Design and Evaluation of Network Control Strategies Using the Macroscopic Fundamental Diagram ..........................................................119
   Jianhe Du, Hesham Rakha, and Vikash Gayah

Traffic Signals in Connected Vehicle Environments: Chances, Challenges and Examples for Future Traffic Signal Control ..................................................125
   Jakob Kaths, Eftychios Papapanagiotou, and Fritz Busch

Integrating Outcome Oriented Performance Measures into Traffic Signal Operations
   Christopher M. Day and Darcy M. Bullock ..........................................................131

Backpressure Traffic Control Algorithms in Field-like Signal Operations ...............................................137
   Igor Dakic, Jelka Stevanovic, and Aleksandar Stevanovic

WS06 Data-Enabled Advancements in Transportation Theory and Application II

A Scenario-Oriented Approach for Noise Detection on Traffic Flow Data ...........................................143
   Mahsa Francesco Alesiani, Mahsa Faizrahnemoon, and Luis Moreira-Matias

WS12 COSSMO — Cooperative Sensing for Smart Mobility II

A Model-Based Approach Across the IoT Lifecycle for Scalable and Distributed Smart Applications ..........................................................149
   Silvia Mazzini, John Favaro, and Laura Baracchi

The ICSI M2M Middleware for IoT-Based Intelligent Transportation Systems ......................................155
   Andrea Azzara, Matteo Petracca, and Paolo Pagano

Computer Vision on Embedded Sensors for Traffic Flow Monitoring ..................................................161
   Massimo Magrini, Davide Moroni, Giovanni Palazzese, Gabriele Pieri, Giuseppe Leone,
   and Ovidio Salvetti

Towards Reliable Wireless Vehicular Communications ........................................................................167
   Awais Khan, João Almeida, Bruno Fernandes, Muhammad Alam, Paulo Pedreiras,
   and Joaquim Ferreira
WS14 Interaction of Automated Vehicles with Other Traffic Participants II
A Controlled Interactive Multiple Model Filter for Combined Pedestrian Intention Recognition and Path Prediction ................................................................. 173
Andreas T. Schulz and Rainer Stiefelhagen

WS03 Advanced Traffic Signal Systems on the Crossroads between Past and Future III
Vehicle Detection Design (Coverage and Accuracy) and the Performance of Congested Traffic Networks ...................................................................................... 179
Juan C. Medina and Rahim F. Benekohal

Using Game Engines for Designing Traffic Control Educational Games ................................................................. 185
Qichao Wang and Montasir Abbas

WS05 New Tendencies of Artificial Intelligence in Dynamic Modeling and Optimization of Traffic Net. I
Pedestrian Evacuation Management of Large Areas: A Bi-level Simulation Approach Based on Fuzzy Logic ........................................................................................................ 190
Marinelli Mario, Mauro Dell’Orco, and Michele Ottomanelli

Transit Trip Planners: Real-Time Strategy-Based Path Recommendation ......................................................................................... 196
Agostino Nuzzolo and Antonio Comi

Managing the Uncertainty of Data Fusion from Different Sources in Modelling Route Choice Behaviour ............................................................................................... 202
Marinelli Mario, Leonardo Caggiani, and Michele Ottomanelli

WS07 Mapping the Landscape of Social Media/Big Data for Transportation Systems Analysis I
Complementing Travel Diary Surveys with Twitter Data: Application of Text Mining Techniques on Activity Location, Type and Time ......................................................................................... 208
Mojtaba Maghrebi, Alireza Abbas, Taha Hossein Rashidi, and S. Travis Waller

Use of Geotagged Social Media in Urban Settings: Empirical Evidence on Its Potential from Twitter ........................................................................................................ 214
Emmanouil Chaniotakis and Constantinou Antoniou

Monitoring Social Networks Formation and Information Velocity for Cases of Airliners’ Crashes ......................................................................................... 220
Loukas Dimitriou, Constantinou Antoniou, and Symeon Christodoulou

WS10 Connected Vehicles and Cooperative Systems I
Vehicle-Infrastructure Localization Based on the SME Filter ................................................................................................................................. 225
Feihu Zhang, Gereon Hinz, Daniel Clarke, and Alois Knoll

Merging Driver Assistance Decision System Using Occupancy Grid-Based Traffic Situation Representation ........................................................................................................ 231
Kenan Mu, Fei Hui, and Xiangmo Zhao
An Automatic Calibration System of Vehicle Motion Error under GPS Blind Area .................................................238

Jingmei Zhou, Xiangmo Zhao, Zhen Wang, Zhigang Xu, Zhanwen Liu, and Xin Cheng

WS12 COSSMO — Cooperative Sensing for Smart Mobility III
Reliable Delivery of Safety Messages in Infrastructure Based Vehicular Networks ........................................244

João Almeida, Muhammad Alam, Bruno Fernandes, Muhammad Awais Khan,
Amaldo Oliveira, and Joaquim Ferreira

WS14 Interaction of Automated Vehicles with Other Traffic Participants III
New Prediction Method of Running Out by Pressure Sensor for Pedestrian-Vehicular
Collision Avoidance Support System .................................................................................................................250

Wada Tomotaka, Go Nakagami, and Masato Matsuoka

WS04 Advancing the Microscopic Traffic Simulations Towards Realistic Modelling of Driver Behaviour
A Study on Variations of Car-following Behavior at Sag Sections and the Impact
of Introducing ACC System ...............................................................................................................................256

Yan Yang, Kentaro Wada, Takashi Oguchi, and Miho Iryo-Asano

A Probabilistic Framework for Microscopic Traffic Propagation .................................................................262

Tim A. Wheeler, Philipp Robbel, and Mykel J. Kochenderfer

Using Extreme Value Theory for the Prediction of Head-On Collisions During Passing
Manoeuvres .......................................................................................................................................................268

Carlos Lima Azevedo and Haneen Farah

How Many Simulation Runs are Required to Achieve Statistically Confident Results: A
Case Study of Simulation-Based Surrogate Safety Measures .................................................................274

Long T. Truong, Majid Sarvi, Graham Currie, and Timothy M. Garoni

Initial Scene Configurations for Highway Traffic Propagation .......................................................................279

Tim A. Wheeler, Mykel J. Kochenderfer, and Philipp Robbel

WS09 Crowdsourcing and Social Transportation I
Transportation Mode Split with Mobile Phone Data .........................................................................................285

Yingchun Qu, Hang Gong, and Pu Wang

Toward Enabling Convenient Urban Transit through Mobile Crowdsensing .............................................290

Garvita Bajaj, Georgios Bouloukakis, Animesh Pathak, Pushpendra Singh,
Nikolaos Georgantas, and Valérie Issarny

WS14 Interaction of Automated Vehicles with Other Traffic Participants IV
Likelihood-Field-Model-Based Vehicle Pose Estimation with Velodyne .....................................................296

Tongtong Chen, Bin Dai, Daxue Liu, Hao Fu, Jinze Song, and Chongyang Wei
WS05 New Tendencies of Artificial Intelligence in Dynamic Modeling and Optimization of Traffic Net. II

DYBUS2: A Real-Time Mesoscopic Transit Modeling Framework .................................................................303
   Agostino Nuzzolo, Umberto Crisalli, Luca Rosati, and Antonio Comi

Evaluation of Risk Perception in Route Choice Experiments: An Application of the Cumulative Prospect Theory .................................................................309
   Stefano de Luca and Roberta Di Pace

Real World Applications Using Parallel Computing Techniques in Dynamic Traffic Assignment and Shortest Path Search .................................................................316
   Alessandro Attanasi, Edmondo Silvestri, Pietro Meschini, and Guido Gentile

Introduction to Parallelization of a Quasi-Anisotropic Mesoscopic Model for Network Traffic Simulation .................................................................322
   Hilmi Berk Celikoglu, Randall V. Hudson, Jeremy J. Blum, and Vijay Kumar Ravi

WS07 Mapping the Landscape of Social Media/Big Data for Transportation Systems Analysis II

The Reach and Influence of DOT Twitter Accounts: A Case Study in Florida ..................................................330
   Ayberk Kocatepe, Javier Lores, Eren Erman Ozguven, and Anil Yazici

WS10 Connected Vehicles and Cooperative Systems II

Multi-resolution-Modeling for Testing and Evaluation of VANET Applications ..............................................336
   Manuel Schiller, Thomas Behrens, and Alois Knoll

An Intersection Game-Theory-Based Traffic Control Algorithm in a Connected Vehicle Environment .................................................................343
   Mohammed Elhenawy, Ahmed A. Elbery, Abdallah A. Hassan, and Hesham A. Rakha

An Integral Approach to Autonomous and Cooperative Vehicles Development and Testing .................................................................348
   Igor Passchier, Gwen van Vugt, and Martijn Tideman

Advanced Vehicle Safety Systems I

Safe and Efficient Runtime Resource Management in Heterogeneous Systems for Automated Driving .................................................................353
   Jan Micha Bormann, Frederik Haxel, Alexander Viehl, Oliver Bringmann, and Wolfgang Rosenstiel

Driver Model Based Automated Driving of Long Vehicle Combinations in Emulated Highway Traffic .................................................................361
   Peter Nilsson, Leo Laine, Bengt Jacobson, and Niels van Duijkeren

A Model Predictive Approach to Emergency Maneuvers in Critical Traffic Situations .................................................................369
   Martin Keller, Carsten Haß, Alois Seewald, and Torsten Bertram

Cooperative Intersection Collision Avoidance in a Constrained Communication Environment .................................................................375
   Alessandro Colombo and Henk Wymeersch
Automated Vehicle Operation, Motion Planning, and Navigation I

Driving Autopilot with Personalization Feature for Improved Safety and Comfort ................................................................. 387
  Vadim Butakov and Petros Ioannou

Truck Platooning Based on Lead Vehicle Speed Profile Optimization and Artificial Physics ................................................................. 394
  Luca Caltagirone, Sina Torabi, and Mattias Wahde

Predictive Traffic Assignment: A New Method and System for Optimal Balancing of Road Traffic ................................................................. 400
  Yan Gao, Kishore Swaminathan, Zhiyong Cui, and Lu Su

Coordinating Truck Platooning by Clustering Pairwise Fuel-Optimal Plans ......................................................................................... 408
  Sebastian van de Hoef, Karl Henrik Johansson, and Dimos V. Dimarogonas

Driver Assistance Systems I

Semi-Markov Process Based Localization Using Radar in Dynamic Environments ......................................................................................... 423
  Matthias Rapp, Markus Hahn, Thom Markus, Jürgen Dickmann, and Klaus Dietmeyer

Inhomogeneous Model Predictive Control Horizon Discretization for an Urban Truck Energy Efficient Driving Application ......................................................................................... 430
  Michael Henzler, Michael Buchholz, and Klaus Dietmeyer

In-vehicle Roundabout Perception Supported by A Priori Map Data ................................................................................................. 437
  Marvin Raaijmakers and Mohamed Essayed Bouzouraa

Driver Reactions in Critical Crossing Situations ........................................................................................................................................ 444
  Stefanie Weber and Berthold Färber

Traffic Signal Adaptive Routing ................................................................................................................................................................. 450
  Valentin Protschky, Sebastian Feld, and Michael Wälischmiller

Traffic Theory, Modelling and Control I

Freeway Traffic Control Considering Capacity Drop Phenomena: Comparison of Different MPC Schemes ......................................................................................... 457
  Lorenzo Maggi, Simona Sacone, and Silvia Siri

Steady-State Signal Control for Urban Traffic Networks ................................................................................................................................. 463
  Zhonghe He, Li Wang, Dai Li, and Lingyu Zhang

A Hybrid Kinematic Wave Model Incorporating Capacity Drops ................................................................................................................................. 471
  Kai Yuan, Victor Knoop, Thomas Schreiter, and Serge P. Hoogendoorn

Efficient Traffic State Estimation and Prediction Based on the Ensemble Kalman Filter with a Fast Implementation and Localized Deterministic Scheme ......................................................................................... 477
  Yufei Yuan, Friso Scholten, and Hans van Lint
Speedup of DTA-Based Simulation of Large Metropolises for Quasi Real-Time ITS Applications

Agop Koulakezian, Billy Graydon, Hossam Abdelgawad, Baher Abdulhai, Yi-Chang Chiu, and Alberto Leon-Garcia

Sensing, Vision and Perception I

A Collaborative Sensor Fusion Algorithm for Multi-object Tracking Using a Gaussian Mixture Probability Hypothesis Density Filter

Milos Vasic and Alcherio Martinoli

3D LIDAR-Based Intersection Recognition and Road Boundary Detection Method for Unmanned Ground Vehicle

Yihuan Zhang, Jun Wang, Xiaonian Wang, Chaocheng Li, and Liang Wang

Vision-Based Road Sign Detection

Manuel Kehl, Markus Enzweiler, Bjoern Froehlich, Uwe Franke, and Wolfgang Heiden

Data Mining and Data Analysis I

Continuous Travel Time Prediction for Transit Signal Priority Based on a Deep Network

Xiong Gang, Wenwen Kang, Feiyue Wang, Fenghua Zhu, Yisheng Lv, Xisong Dong, Jukka Riekki, and Susanna Pirttikangas

Tracking Trip Changes with Event Triggering

Panayiotis Kolios, Georgios Ellinas, and Christos Panayiotou

Data Driven Approaches for Passenger Train Delay Estimation

Ren Wang and Daniel B. Work

Fusion of Carsharing and Charging Station Data to Analyze Behavior of Free-Floating Carsharing BEVs

Maximilian Schüßler and Klaus Bogenberger

Learning Driving Scene Prediction from Environmental Perception of Vehicle Fleet Data

Justus Jordan, Christian Ruhhammer, Horst Kloeden, and Martin Kleinsteuber

Data Mining and Data Analysis II

A Road Hotspots Identification Method Based on Natural Nearest Neighbor Clustering

Qingwen Han, Yingxiang Zhu, Lingqiu Zeng, Lei Ye, Xueying He, Xiaoying Liu, Haotian Wu, and Qingsheng Zhu

Micro-Auction-Based Traffic-Light Control: Responsive, Local Decision Making

Michele Covell, Shumeet Baluja, and Rahul Sukthankar

Drift3Flow: Freeway-incident Prediction Using Real-time Learning

Luis Moreira-Matias and Francesco Alesiani
Comparison of Machine Learning Techniques for Vehicle Classification Using Road Side Sensors .....................................................................................................................................................................................572

Denis Kleyko, Roland Hostettler, Wolfgang Birk, and Evgeny Osipov

Mobility Model for the Estimation of the Spatiotemporal Energy Demand of Battery Electric Vehicles in Singapore ..........................................................................................................................................................................................578

Pablo Hidalgo, Annette E. Trippe, Markus Lienkamp, and Thomas Hamacher

Special Session — Urban Transport Systems: Modelling and Control I

GPS-Data Analysis of Munich’s Free-Floating Bike Sharing System and Application of an Operator-based Relocation Strategy ..................................................................................................................................................................................584

Svenja Reiss and Klaus Bogenberger

Optimize Energy of Train Simulation with Track Slope Data .........................................................................................................................................................................................................................................................590

Sy-Ruen Huang, Hung-Kang Sung, and Chuan-Hsun Ma

SmartRoad: A New Approach to Law Enforcement in Dense Traffic Environments ..........................................................................................................................................................................................................................598

Alwyn Jakobus Hoffman and Albertus J. Pretorius

A New Methodology to Calibrate the Congestion Wave for the Cell Transmission Model for Urban Traffic........................................................................................................................................................................................................................................606

Ludovica Adacher and Marco Tiriolo

An Integrated Computational Framework for the Estimation of Dynamic OD Trip Matrices ..........................................................................................................................................................................................................................612

Barceló Jaume and Lidia Montero

Special Session — Computer Vision and Imaging Systems in Transportation I

Fine-Grained Walking Activity Recognition via Driving Recorder Dataset ........................................................................................................................................................................................................................................620

Hirokatsu Kataoka, Yoshimitsu Aoki, Yutaka Satoh, Shoko Oikawa, and Yasuhiro Matsui

A Visual Template-Matching Method for Articulation Angle Measurement ........................................................................................................................................................................................................................................626

Christopher de Saxe and David Cebon

Implicit Hand Gestures in Aeronautics Cockpit as a Cue for Crew State and Workload Inference ........................................................................................................................................................................................................................................632

Kamil Behúň, Alena Pavelková, and Adam Herout

Static Occlusion Detection and Handling in Transportation Videos ........................................................................................................................................................................................................................................638

Matthew Shreve, Edgar A. Bernal, Qun Li, and Robert P. Loce

CHASE Algorithm: “Ease of Driving” Classification ........................................................................................................................................................................................................................................644

Veera Ganesh Yalla, Preeti J. Pillai, and Kentaro Oguchi

Advanced Vehicle Safety Systems II

Adopting Machine Learning Methods to Predict Red-light Running Violations ........................................................................................................................................................................................................................................650

Arash Jahangiri, Hesham A. Rakha, and Thomas A. Dingus

Risk-Aversive Behavior Planning under Multiple Situations with Uncertainty ........................................................................................................................................................................................................................................656

Florian Damerow and Julian Eggert

Tracking and Motion Cues for Rear-View Pedestrian Detection ........................................................................................................................................................................................................................................664

Dan Levi and Shai Silberstein
Towards Automated Driving: Unmanned Protective Vehicle for Highway Hard Shoulder

Torben Stolte, Andreas Reschka, Gerrit Bagschik, and Markus Maurer

Multi-classification of Driver Intentions in Yielding Scenarios

Erik Ward and John Folkesson

**Automated Vehicle Operation, Motion Planning, and Navigation II**

Path Planning and Decision Making for Autonomous Vehicle in Urban Environment

Mengyin Fu, Wenjie Song, Yang Yi, and Meiling Wang

An Improved FastSLAM Algorithm for Autonomous Vehicle Based on the Strong Tracking Square Root Central Difference Kalman Filter

Jian-min Duan, Dan Liu, Hong-xiao Yu, and Hui Shi

Fault Detection and Identification for Proprioceptive Sensors Using Analytical Redundancy and Road Signature Determination

Nicolas Pous, Dominique Gruyer, and Denis Gingras

Using Context Information and Probabilistic Classification for Making Extended Long-Term Trajectory Predictions

Stefan Klingelschmitt and Julian Eggert

Model-Based Derivation of Perception Accuracy Requirements for Vehicle Localization in Urban Environments

Jan Rohde, Jan Erik Stellet, Holger Mielenz, and J. Marius Zöllner

**Driver Assistance Systems II**

A Comparative Analysis of Decision Trees Based Classifiers for Road Detection in Urban Environments

Carlos Fernández, Rubén Izquierdo, David Fernandez Llorca, and Miguel Angel Sotelo

DriveBlue: Traffic Incident Prediction through Single Site Bluetooth

Ahmed Salem, Tamer Nadeem, Mecit Cetin, and Samy El-Tawab

Toward Perception-Driven Urban Environment Modeling for Automated Road Vehicles

Jens Rieken, Richard Matthaei, and Markus Maurer

Identifying Modes of Intent from Driver Behaviors in Dynamic Environments

Katherine Driggs-Campbell and Ruzena Bajcsy

Detecting Preceding Vehicles Using 4-Dimensional Mapping of Colors in Image

Qingpeng Gan, Kaicheng Li, Jidong Lv, Lei Yuan, and Tao Wen

**Road and Rail Traffic Modelling and Management I**

Macroscopic Modeling of Spatiotemporal Information Flow Propagation Wave under Vehicle-to-Vehicle Communications

Yong Hoon Kim, Srinivas Peeta, and Xiaozheng He

Verified Traffic Networks: Component-Based Verification of Cyber-Physical Flow Systems

Andreas Müller, Stefan Mitsch, and André Platzer
A Hybrid Metaheuristic for Routing in Road Networks .................................................................765
  Omar Dib, Marie-Ange Manier, and Alexandre Caminada

A Multiple-Phase Train Trajectory Optimization Method under Real-Time Rail Traffic
Management .................................................................................................................................771
  Pengling Wang, Rob M. P. Goverde, and Lei Ma

Mutation Testing for Evaluating the Completeness of Test Cases in High-Speed Train Control System .................................................................777
  Teng Li, Kaicheng Li, Jidong Lv, Lei Yuan, Qiang Fu, and Tao Wen

Sensing, Vision and Perception II

Convergence of a Traffic Signs-Based Fog Density Model .................................................................783
  Rachid Belaroussi and Dominique Gruyer

Detection and Tracking of Moving Objects Using 2.5D Motion Grids ...............................................788
  Alireza Asvadi, Paulo Peixoto, and Urbano Nunes

Additional Traffic Sign Detection — A Comparative Study .................................................................794
  Thomas Wenzel, Steffen Brueggert, and Joachim Denzler

Combining Shape-Based and Gradient-Based Classifiers for Vehicle Classification .........................800
  Hakki Can Karaimer, Ibrahim Cinaroglu, and Yalin Bastanlar

Online Active Calibration for a Multi-LRF System .............................................................................806
  Guoyang Xie, Tao Xu, Carsten Isert, Michael Aeberhard, Shaohua Li, and Ming Liu

Data Mining and Data Analysis III

Probabilistic Map Matching of Sparse and Noisy Smartphone Location Data .......................................812
  George Rosario Jagadeesh and Thambipillai Srikanthan

Prior LDA and SVM Based Fault Diagnosis of Vehicle On-board Equipment for High Speed Railway .................................................................818
  Feng Wang, Tian-hua Xu, Yang Zhao, and Ye-ran Huang

Traffic State Estimation with the Advanced Probe Vehicles Using Data Assimilation ..........................824
  Toru Seo, Takahiko Kusakabe, and Yasuo Asakura

Modeling Ratings of In-vehicle Alerts to Pedestrian Encounters in Naturalistic Situations .................831
  Jan-Erik Källhammer and Kip Smith

Modeling Temporal Flow Assignment in Metro Networks Using Smart Card Data .............................836
  Lijun Sun and Jian Gang Jin

Data Mining and Data Analysis IV

Social or Green? A Data-Driven Approach for More Enjoyable Carpooling .......................................842
  Riccardo Guidotti, Andrea Sassi, Michele Berlingerio, Alessandra Pascale, and Bissan Ghaddar

Fluctuation Similarity Modeling for Traffic Flow Time Series: A Clustering Approach .......................848
  Shan Jiang, Shuofeng Wang, Zhiheng Li, Weiwei Guo, and Xin Pei
Feature Relevance Estimation for Learning Pedestrian Behavior at Crosswalks ..................................................854
  Benjamin Völz, Holger Mielenz, Gabriel Agamennoni, and Roland Siegwart

Inferring Unmet Demand from Taxi Probe Data .................................................................861
  Anwar Afian, Amedeo Odoni, and Daniela Rus

Travelers’ Risk Attitude Classification Method Based on Cumulative Prospect Theory and Experimental Results .................................................................869
  Chao Yang, Binbin Liu, Lianyan Zhao, and Xiangdong Xu

**Special Session — Urban Transport Systems: Modelling and Control II**

Opportunistic Ride Sharing via Whereabouts Analysis ...........................................................875
  Nicola Bicocchi, Marco Mamei, Andrea Sassi, and Franco Zambonelli

Feedback Perimeter Control for Heterogeneous Urban Networks Using Adaptive Optimization .................................................................................................................882
  Anastasios Kouvelas, Mohamadreza Saeedmanesh, and Nikolas Geroliminis

Measurement and Analysis of Heterogenous Vehicle Following Behavior on Urban Freeways: Time Headways and Standstill Distances ..................................................888
  Andrew Houchin, Jing Dong, Neal Hawkins, and Skyla Knickerbocker

On Distributed Traffic Signal Control ..................................................................................894
  Jan Přikryl, Jakub Novotný, and Václav Šmídl

A Deductive Model for Multi-lane Vehicular Traffic ........................................................................900
  Minjie Chen, Hartmut Schwant, and Günter Bärwolff

**Special Session — Computer Vision and Imaging Systems in Transportation II**

Color-Based Free-Space Segmentation Using Online Disparity-Supervised Learning .........................906
  Willem P. Sanberg, Gijs Dubbelman, and Peter H. N. de With

Comparison of Early and Late Information Fusion for Multi-camera HOV Lane Enforcement .................................................................................................................................913
  Beilei Xu, Orhan Bulan, Jayant Kumar, Safwan Wshah, Vladimir Kozitsky, and Peter Paul

Occlusion-Robust Pedestrian Tracking in Crowded Scenes ........................................................................919
  Jeroen S. van Gastel, Matthijs H. Zwemer, Rob G. J. Wijnhoven, and Peter H. N. de With

Automated Generation of Road Marking Maps from Street-level Panoramic Images .................................................925
  Thomas Woudsma, Lykele Hazelhoft, Peter H. N. de With, and Ivo Creusen

A Vision-Based Hierarchical Framework for Autonomous Front-Vehicle Taillights Detection and Signal Recognition ............................................................................................................931
  Zhiyong Cui, Shao-Wen Yang, and Hsin-Mu Tsai

**Advanced Vehicle Safety Systems III**

A Preliminary Model of Driver Acceleration Behavior Prior to Real-World Straight Crossing Path Intersection Crashes Using EDRs ........................................................................................................938
  John M. Scanlon, Kristofer D. Kusano, and Hampton Clay Gabler

A Generic Parameter Optimization Workflow for Camera Control Algorithms ..................................................944
  Jens Westerhoff, Mirko Meuter, and Anton Kummert
Rule-Based Highway Maneuver Intention Recognition ................................................................. 950
  Julia Nilsson, Jonas Fredriksson, and Erik Coelingh

Determining the Nonexistence of Evasive Trajectories for Collision Avoidance Systems .................. 956
  Sebastian Söntges and Matthias Althoff

Exact Input-Output Linearization for a Trailer Steering Controller .................................................. 962
  Gunter Nitzsche, Klaus Röbenack, Sebastian Wagner, and Stephan Zipser

Vision-Based Identification and Application of the Leader Vehicle in Urban Environment .................. 968
  Chunzhao Guo, Kiyosumi Kidono, and Masaru Ogawa

Automated Vehicle Operation, Motion Planning, and Navigation III

Situation Assessment in Tactical Lane Change Behavior Planning for Automated Vehicles ....................... 975
  Simon Ulbrich and Markus Maurer

Defining and Substantiating the Terms Scene, Situation, and Scenario for Automated Driving .................. 982
  Simon Ulbrich, Till Menzel, Andreas Reschka, Fabian Schuldt, and Markus Maurer

Towards Tactical Lane Change Behavior Planning for Automated Vehicles ........................................ 989
  Simon Ulbrich and Markus Maurer

A General Purpose Approach for Global and Local Path Planning Combination .................................... 996
  Andrea Signifredi, Bombini Luca, Alessandro Coati, Javier Sanchez Medina, and Daniele Molinari

  Xuewei Qi, Guoyuan Wu, Kanok Boriboonsomsin, and Matthew J. Barth

Autonomous Vehicle Control Near the Limit of Friction ......................................................................... 1008
  Sirui Song, Andy Wong, Jan Huissoon, and Steven L. Waslander

Special Session — Human Factors in Urban Traffic

Urban Perception — A Cross-Correlation Approach to Quantify the Social Interaction in a Multiple Simulator Setting ........................................................................... 1014
  Christian Lehsing, Andrea Kracke, and Klaus Bengler

Algorithm for Driver Intention Detection with Fuzzy Logic and Edit Distance ....................................... 1022
  Jens Heine, Michael Sylla, Ingmar Langer, Thomas Schramm, Bettina Abendroth, and Ralph Bruder

Accident Prevention through Visual Warnings: How to Design Warnings in Head-up Display for Older and Younger Drivers ................................................................. 1028
  Juela Kazazi, Susann Winkler, and Mark Vollrath

Distractive or Supportive — How Warnings in the Head-up Display Affect Drivers’ Gaze and Driving Behavior ...................................................................................... 1035
  Susann Winkler, Juela Kazazi, and Mark Vollrath
### Special Session — Wireless Vehicular Communications

An Analysis on Stochastic Broadcast Range in VANET Based on Generalized Packet Loss Model ................................................................. 1055  
*Yizhi Wang, Yi Zhang, Jianming Hu, and Xin Pei*

Threat and Countermeasures Analysis for WAVE Service Advertisement ...................................................................................... 1061  
*William Whyte, Jonathan Petit, Virendra Kumar, John Moring, and Richard Roy*

Cognitive Control Method for Cost-Efficient Communication-Based Train Control Systems in Smart Grids ........................................ 1069  
*Wenzhe Sun, F. Richard Yu, and Tao Tang*

A Game-Theoretic Control Approach to Communication-Based Train Control (CBTC) Systems with Packet Drops ........................... 1075  
*Yukun Chen, Bing Bu, and Sun Wenzhe*

Optimized Speed Harmonization with Connected Vehicles for Work Zones .................................................................................... 1081  
*Hani Ramezani and Rahim Benekohal*

Intersection Based Routing in Urban VANETs ................................................................................................................................. 1087  
*Tankut Acarman, Çağdaş Yaman, Yavuz Pekşen, and Ali Ufuk Peker*

### Special Session — Pedestrian and Bicyclist Safety, Traffic, and Evacuation Dynamics

Evaluating Bottleneck Magnitude of Massive Crowd Flow Networks ................................................................................................. 1093  
*Ma Jian, Juan Chen, Siuming Lo, Sumei Xu, and Weiguo Song*

Effect of Assailants on Crowd Evacuation: A Fuzzy Logic Approach ............................................................................................. 1098  
*Min Zhou, Hairong Dong, Jiemin Zhang, Xubin Sun, and Xiuming Yao*

Reconstruction of People Flow in Areas of Incomplete Data Availability .......................................................................................... 1104  
*Xu Yongwei, Xiaowei Shao, and Ryosuke Shibasaki*

Urban Road Optimization Based on Safety and Cyclists’ Effort Required by Bike Tracks ................................................................ 1111  
*Henrique Dezani*

Analysis of the Braking Behaviour in Pedestrian Automatic Emergency Braking ............................................................................ 1117  
*Alberto Lopez, Rini Sherony, Stanley Chien, Lingxi Li, Yi Qiang, and Yaobin Chen*

Preliminary Benefit Analysis for Pedestrian Crash Imminent Braking Systems ................................................................................... 1123  
*David H Good, Stanley Chien, Lingxi Li, Kerry Krutilla, and Yaobin Chen*
Special Session — Advances in Motorway Traffic Control

On-ramp Selection Methodology for Coordinated Ramp Metering Schemes .................................................................1129
   Ramon L. Landman, Andreas Hegyi, and Serge P. Hoogendoorn

Efficient Model Predictive Control for Variable Speed Limits by Optimizing Parameterized Control Schemes ........................................................................................................1137
   Goof Sterk van de Weg, Andreas Hegyi, Serge P. Hoogendoorn, and Bart De Schutter

A New Emission Model Including On-ramps for Two-Class Freeway Traffic Control .........................................................1143
   Cecilia Pasquale, Shuai Liu, Silvia Siri, Simona Sacone, and Bart De Schutter

Linear Quadratic MPC for Integrated Route Guidance and Ramp Metering .................................................................1150
   Yu Han, Yufei Yuan, Andreas Hegyi, and Serge P. Hoogendoorn

Integrated Variable Speed Limit and Ramp Metering Control Against Jam Waves — A COSCAL v2 Based Approach ........................................................................................................1156
   Niharika Mahajan, Andreas Hegyi, Goof Sterk van de Weg, and Serge P. Hoogendoorn

Combined Variable Speed Limit and Lane Change Control for Truck-Dominant Highway Segment ........................................................................................................................................................................1163
   Yihang Zhang and Petros A. Ioannou

Special Session — Artificial Transportation Systems and Simulation

Departure MANagement with a Reinforcement Learning Approach: Respecting CFMU Slots ........................................................................................................................................................................1169
   Ivomar Brito Soares, Yann-Michaël de Hauwere, Kris Januarius, Tim Brys, Thierry Salvant, and Ann Nowé

Multi-objective Evolutionary Traffic Assignment ........................................................................................................1177
   Camelia Chira, Ana L. C. Bazzan, and Rosaldo J. F. Rossetti

Content-Based Recommendation for Traffic Signal Control ..........................................................................................1183
   Y. F. Zhao, F. Y. Wang, H. Gao, F. H. Zhu, Y. S. Lv, and P.J. Ye

Assessment of Adaptive Traffic Signal Control Using Hardware in the Loop Simulation ......................................................1189
   Hossam Abdelgawad, Kasra Rezaee, Samah El-Tantawy, Baher Abdulhai, and Tamer Abdulazim

A Washout and a Tilt Coordination Algorithm for a Hexapod Platform ..............................................................................1196
   Konrad Stahl, Klaus-Dieter Leimbach, Ansgar Meroth, and Raoul Zöllner

A Benchmark Analysis of Open Source Transportation-Electrification Simulation Tools .................................................1202
   Deema Fathi Allan and Amro M. Farid

Special Session — Environment Perception for Automated On-road Vehicles

Spatial Prior for Nonparametric Road Scene Parsing .......................................................................................................1209
   Shuai Di, Honggang Zhang, Xue Mei, Danil Prokhorov, and Haibin Ling

Distant Pedestrian Re-detection from an In-vehicle Camera Based on Detections by Other Vehicles .................................................................1215
   Yasutomo Kawanishi, Daisuke Deguchi, Ichiro Ide, Hiroshi Murase, and Hironobu Fujiyoshi
Multi-cue, Model-Based Detection and Mapping of Road Curb Features Using Stereo Vision.........................................................................................................................................................................1221

Martin Kellner, Ulrich Hofmann, Mohamed Essayed Bouzouraa, and Neumaier Stephan

A Framework for Urban Traffic Hotspots Detection ...........................................................................................................................................................................................................................................1229

Javier Fernandez, Enrique Puertas, Aliane Nourdine, and Victor Flores

Polar-Grid Representation and Kriging-Based 2.5D Interpolation for Urban Environment Modelling ..................................................................................................................................................................................................................................................1234

Cristiano Premebida, Joao Sousa, Luis Garrote, and Urbano Nunes

Classifying and Passing 3D Obstacles for Autonomous Driving ..................................................................................................................................................................................................................................................1240

Michael Delp, Naoki Nagasaka, Nobuhide Kamata, and Michael R. James

Industry Track I

libHOG: Energy-Efficient Histogram of Oriented Gradient Computation ...........................................................................................................................................................................................................................................1248

Forrest N. Iandola, Matthew W. Moskewicz, and Kurt Keutzer

Stuck Around the Stadium? An Approach to Identify Road Segments Affected by Planned Special Events ..................................................................................................................................................................................................................................................1255

Simon Kwoczek, Sergio Di Martino, and Wolfgang Nejdl

Intersection Vehicle Cooperative Eco-Driving in the Context of Partially Connected Vehicle Environment ..................................................................................................................................................................................................................................................1261

Md Abdus Samad Kamal, Shun Taguchi, and Takayoshi Yoshimura

COMPANION — Towards Co-operative Platoon Management of Heavy-Duty Vehicles ..................................................................................................................................................................................................................................................1267

Söenke Eilers, Jonas Mårtensson, Henrik Pettersson, Marcos Pillado, David Gallegos, Marta Tobar, Karl Henrik Johansson, Xiaoliang Ma, Thomas Friedrichs, Shadan Sadeghian Borojeni, and Magnus Adolfson

An Automated Electric Vehicle Prototype Showing New Trends in Automotive Architectures ..................................................................................................................................................................................................................................................1274

Martin Buechel, Jelena Frtunikj, Klaus Becker, Stephan Sommer, Christian Buckl, Michael Armbruster, Andre Marek, Andreas Zirkler, Cornel Klein, and Alois Knoll

Free Space Detection: A Corner Stone of Automated Driving ..................................................................................................................................................................................................................................................1280

Leo Neumann, Benoit Vanholme, Markus Gressmann, Alexander Bachmann, Lars Kähike, and Florian Schüle

Advanced Vehicle Safety Systems IV

Fast Cyclist Detection by Cascaded Detector and Geometric Constraint ..................................................................................................................................................................................................................................................1286

Wei Tian and Martin Lauer

Temporal Performance of Advanced Driver Assistance Systems vis-à-vis Human Driving Behavior in Dense Traffic ..................................................................................................................................................................................................................................................1292

Roelof Hamberg, Teun Hendriks, and Tjerk Bijlsma

A Real-Time Multi-scale Vehicle Detection and Tracking Approach for Smartphones ..................................................................................................................................................................................................................................................1298

Eduardo Romera, Luis M. Bergasa, and Roberto Arroyo
Driver Assistance Control Based on Model Predictive Computation of Constraint Satisfaction .................................................. 1304
  Takuma Yamaguchi, Tatebe Jumpei, Hiroyuki Okuda, Yuichi Tazaki, Tatsuya Suzuki, Taka-fumi Ito, and Kenji Muto

**Human Factors I**

Estimation of Driver’s Longitudinal Intention for the Preceding Car by Brain Current Distribution Estimation Method ................................................................. 1311
  Toshiiito Ikenishi and Takayoshi Kamada

Effects of Quantity and Position of Guides on Pedestrian Evacuation .................................................................................. 1317
  Xiaoxia Yang, Hairong Dong, Xiuming Yao, and Xubin Sun

Cluster Regularized Extreme Learning Machine for Detecting Mixed-Type Distraction in Driving ................................................... 1323
  Tianchi Liu, Yan Yang, Guang-Bin Huang, Zhiping Lin, Felix Klanner, Cornelia Denk, and Ralph H. Rasshofer

Modeling and Simulation of Evacuation Route Choice Behavior Using Fuzzy Set Theory ................................................................................................. 1327
  Hui Fu, Na Liu, Jun Liang, Adam J. Pel, and Serge P. Hoogendoorn

**Transportation Electrification and Electric Vehicles**

Simulation Based Studies on the Integration of Battery-Electric Vehicles in Regional Bus Services ......................................................... 1333
  Felix Burmeister, Lars Schnieder, and Tamás Kurczveil

Algorithms for Electric Vehicle Scheduling in Mobility-on-Demand Schemes ................................................................................ 1339
  Emmanouil S. Rigas, Sarvapali D. Ramchum, and Nick Bassiliades

Modelling and Simulation of New Traction Power Supply System in Electrified Railway .................................................... 1345
  Minwu Chen, Tao Wen, Wenbing Jiang, and Jie Luo

2-ASCET for Broadband Multicarrier Transmission over In-home and In-vehicle Power Line Networks ......................................................... 1351
  Freddy A. Pinto Benel and Fernando Cruz-Roldán

**Positioning and Safety for Pedestrians and Cyclists**

Assistive Pedestrian Crossings by Means of Stereo Localization and RFID Anonymous Disability Identification ................................................................. 1357
  D. F. Llorca, R. Quintero, I. Parra, R. Izquierdo, C. Fernández, and M. A. Sotelo

Model-Based Assessment of Aspects of User-satisfaction in Bicycle Sharing Systems ................................................................. 1363
  Mieke Massink and Rytis Paškauskas

Bounded Acceleration Capacity Drop in a Lagrangian Formulation of the Kinematic Wave Model with Vehicle Characteristics and Unconstrained Overtaking ......................................................... 1371
  Simeon C. Calvert, Maaik Snoelder, Henk Taale, Femke L. M. van Wageningen-Kessels, and Serge P. Hoogendoorn

xxi
Pedestrian Localization Service Using 3D Map and RAIM GNSS Satellite Selection

Li-Ta Hsu, Gu Yanlei, and Kamijo Shunsuke

Network Modelling and Emergency Vehicle Management

A Discrete-Flow Form of the Point-Queue Model

He Zhengbing, Ailing Huang, Dongfang Ma, and Ning Zhu

A Medium-Scale Network Model for Short-Term Traffic Prediction at Neighbourhood Level

Davide Giglio

Dynamic Graph Hybrid Automata: A Modeling Method for Traffic Network

Yangzhou Chen, Wei Li, Yuqi Guo, and Yuanhang Wu

GIS-Based Analysis on Vulnerability of Ambulance Response Coverage to Traffic Condition: A Case Study of Seoul

Jungwoo Cho and Yoonjin Yoon

Intelligent Logistics and Multimodal ITS

Design of Railway Freight Business Process for Total Logistics Service

Yimei Chang, Xiaoning Zhu, Ailing Huang, and Ying Bo

A Simulation Approach to the Optimized Design of Cross-border Operations

Alwyn Hoffman and Ernest Bhero

Monitoring the Static Vehicle Load on a Heavy Goods Vehicle

Ivor Humphreys, Paul McDonald, Margaret O’Mahony, and Dermot Geraghty

Achieving Full Plan Multimodality by Integrating Multiple Incomplete Journey Planners

Jan Nykl, Jan Hrncir, and Michal Jakob

ITS Field Tests and Implementation

Advanced Co-simulation Framework for Cooperative Maneuvers Among Vehicles

Antonio Artuñedo, Jorge Godoy, Rodolfo Haber, Jorge Villagrá, and Raúl M. del Toro

Performance Comparison of Filtering Techniques for Real Time Traffic Density

B. Dhivyabharathi, Shnikant Fulari, Rushikesh Amrutsamanvar, Lelitha Vanajakshi, Shankar C. Subramanian, and Manoj Panda

Use of DSFS as a Speed Transition Zone Countermeasure in Small, Rural Communities

Shauna L. Hallmark, Neal Hawkins, and Skylar Knickerbocker

Testing of Advanced Driver Assistance Towards Automated Driving: A Survey and Taxonomy on Existing Approaches and Open Questions

Jan Erik Stellet, Marc René Zofka, Jan Schumacher, Thomas Schamm, Frank Niewels, and J. Marius Zöllner
Demand Estimation
Spatial and Temporal Analysis of Mismatch between Planned Road Infrastructure and Traffic Demand in Large Cities ..............................................................1463
Jordan Ivanchev, Heiko Aydt, and Alois Knoll
Towards Online Quasi-dynamic o-d Flow Estimation/Updating ..................................................1471
Marzano Vittorio, Andrea Papola, Fulvio Simonelli, and Ennio Cascetta
A Two-Steps Dynamic Demand Estimation Approach Sequentially Adjusting Generations and Distributions ..................................................................................1477
Guido Cantelmo, Francesco Viti, Ernesto Cipriani, and Nigro Marialisa
The Impact of Route Choice Modeling on Dynamic OD Estimation ................................................1483
Ernesto Cipriani, Andrea del Giudice, Nigro Marialisa, Francesco Viti, and Guido Cantelmo

Industry Track II
Traffic Congestion Analysis Visualisation Tool ................................................................................1489
Natasha Petrovska and Aleksandar Stevanovic
Towards Annotation Free License Plate Recognition ....................................................................1495
Orhan Bulan, Vladimir Kozitsky, and Aaron Burry
Acquisition and Use of Mobility Habits for Personal Assistants ..................................................1500
Lukas Nack, Roman Roor, Michael Karg, Alexandra Kirsch, Olga Birth, Sebastian Leibe, and Markus Strassberger
Development and Performance Analysis of Bicycle Collision Avoidance (BCA) Algorithms by Using PreScan and MATLAB .................................................................................1506
Yeona Kim, Jisu Ryu, Baek Min, Hwan Lee, Cheol Mun, and Kyunbyoung Ko

Advanced Vehicle Safety Systems V
Estimating the Process Noise Variance for Vehicle Motion Models ................................................1512
Jan Erik Stellet, Fabian Straub, Jan Schumacher, Wolfgang Branz, and J. Marius Zöllner
A Probabilistic Model for the Estimation of Pedestrian Crossing Behavior at Signalized Intersections .....................................................................................................................1520
Yoriyoshi Hashimoto, Gu Yanlei, Li-Ta Hsu, and Kamijo Shunsuke
Introduction of Traffic Situation Management for a Rigid Truck, Tests Conducted on Object Avoidance by Steering within Ego Lane .................................................................1527
Sachin Janardhanan, Mansour Keshavarz, and Leo Laine
Pedestrian and Bicyclist Crash Scenarios in the U.S ......................................................................1533
Rini Sherony and Chong Zhang
Human Factors II
Identification of Mode Switching Condition in Overtaking Behavior Using Variable-Free Logistic Regression Model .......................................................... 1539
Hiroyuki Okuda, Soichi Yoshino, Tatsuya Suzuki, and Toshitake Kawai

Usability of Pilot's Gaze in Aeronautic Cockpit for Safer Aircraft ............................................ 1545
Alena Pavelková, Adam Herout, and Kamil Behúň

Be-In/Be-Out with Bluetooth Low Energy: Implicit Ticketing for Public Transportation Systems .................................................................................................................. 1551
Wolfgang Narzt, Stefan Mayerhofer, Otto Weichselbaum, Stefan Haselböck, and Niklas Höfler

Towards Credible Driver Behavior Modeling ........................................................................ 1557
Blaszczzyk Piotr, Wojciech Turek, Aleksander Byrski, and Krzysztof Cetnarowicz

Smart Mobility
Parameters Affecting Professional Driver Response to VMS Messages ..................................... 1563
Maria Poulopoulou, Ioanna Spyropoulou, and Constantinos Antoniou

Accessible and Inclusive Mobility for All with Individual Travel Assistance — Aim4It .................... 1569
Jan-Peter Nicklas, Nadine Schlütter, Petra Winzer, and Lars Schniede

Rat Race Roulette: Helping Humans Make Sense of Probabilistic Journey Time? ...................... 1575
Lea Deleris and Stéphane Deparis

The Facility Location Problem in a Reverse Logistic Network: Weeenmodels Project in the City of Genoa ...................................................................................... 1581
Silvia Siri, Ishara Thirimadura Mendis, and Cino Repetto

Driver Assistance Systems III
High-Level Data Fusion Based Probabilistic Situation Assessment for Highly Automated Driving ......................................................................................................................... 1587
Samyeul Noh, Kyoungwhwan An, and Wooyong Han

A Comparison Study on Vehicle Detection in Far Infrared and Regular Images .......................... 1595
David Savastürk, Bjoern Froehlich, Nicolai Schneider, Markus Enzweiler, and Uwe Franke

Impact of Mixed Traffic in Urban Environment with Different Percentage Rates of Adaptive stop&go Cruise Control Equipped Vehicles on the Traffic Flow, Travel Time, Energy Demand and Emission .......................................................... 1601
Aleksandar Kostikj, Milan Kjosevski, and Ljupco Kocarev

Predicting Driver Intent from Models of Naturalistic Driving .................................................... 1609
Asher Bender, James R. Ward, Stewart Worrall, and Eduardo M. Nebot
Advanced Vehicle Safety Systems VI
Combi-Tor: Track-to-Track Association Framework for Automotive Sensor Fusion ........................................1616
Bharanidhar Duraisamy and Tilo Schwarz

Driver Inattention Detection System: A PSO-Based Multiview Classification Approach ................................1624
Arief Koeswadiy, Ramzi Abdelmoula, Fakhri Karray, and Mohamed Kamel

Walid Balid, Hasan Tafish, and Hazem H. Refai

On-Road Vehicle Localization with GPS under Long Term Failure of a Vision Sensor ........................................1638
Changmook Kang, Seung-Hi Lee, and Chung Choo Chung

Special Session — Automated Driving I
Optical Flow-Based Moving-Static Separation in Driving Assistance Systems ...........................................1644
Duong Nguyen, Ciarán Hughes, and Jonathan Horgan

Driver-Activity Recognition in the Context of Conditionally Autonomous Driving ............................................1652
Christian Braunagel, Enkelejda Kasneci, Wolfgang Stolzmann, and Wolfgang Rosenstiel

Formalising Traffic Rules for Accountability of Autonomous Vehicles ..........................................................1658
Albert Rizaldi and Matthias Althoff

Hybrid Strategy of Motion Planning with Kinematic Optimization for Autonomous Driving ................................1666
Weiwei Huang, Ning Wu, Zhiwei Song, Xiaojun Wu, Qun Zhang, and Susu Yao

Special Session — Its for Public Transport I
DEPART: Dynamic Route Planning in Stochastic Time-Dependent Public Transit Networks ................................................1672
Peng Ni, Hoang Tam Vo, Daniel Dahlmeier, Wentong Cai, Jordan Ivanchev, and Heiko Aydt

Metaheuristics for Real-Time Near-Optimal Train Scheduling and Routing ...........................................................1678
Marcella Samà, Andrea D’Ariano, Alessandro Toli, Dario Pacciarelli, and Francesco Corman

A Comparison of Transit Signal Priority Strategies with Multi-step Detection at Isolated Intersections ........................1684
Shan Wang, Ying Ni, Zupeng Liu, and Keping Li

A New Stochastic Mesomodel for Optimizing Multi-modal Signal Settings for Networks ..............................1690
Bart Wolput, Chris Tampère, and Eleni Christofa

Special Session — Cooperation in Complex Networks of Vehicles I
Automation of a T-intersection Using Virtual Platoons of Cooperative Autonomous Vehicles ..............................................................1696
Alejandro Ivan Morales Medina, Nathan van de Wouw, and Henk Nijmeijer

Fuel-Efficient Control of Merging Maneuvers for Heavy-Duty Vehicle Platooning ........................................1702
Julian P. J. Koller, Alex Grossmann Colin, Bart Besselink, and Karl Henrik Johansson

Coordination of Automated Vehicles at Intersections: Decision, Efficiency and Control ..................................1708
Arnaud de La Fortelle
Interactive Test Tool for Interoperable C-ITS Development .................................................................1713

Alexey Voronov, Cristofer Englund, Hoai Hoang Bengtsson, Lei Chen, Jeroen Ploeg,
Jan de Jonhg, and Jacco van de Sluis

Industry Track III

Vehicle Behavior Analysis for Uneven Road Surface Detection ...............................................................1719

Shubhranshu Barnwal

Model Based Route Guidance for Hybrid and Electric Vehicles ...............................................................1723

Can Kurtulus and Gökhan Inalhan

A Constructive Intelligent Transportation System for Urban Traffic Network in Developing Countries via GPS Data from Multiple Transportation Modes .........................................................1729

Duc-Thinh Pham, Bao An Mai Hoang, Son Nguyen Thanh, Ha Nguyen, and Vu Duong

Large-Scale Dynamic Traffic Assignment: Practical Lessons from an Application in Sydney, Australia .................................................................................................................................................................................1735

Melissa Duell, Nima Amini, Sai Chand, Hanna Grzybowska, Neeraj Saxena,
and S. Travis Waller

Advanced Vehicle Safety Systems VII

Adaptive Estimation of Vehicle Dynamics Through RLS and Kalman Filter Approaches ................................1741

Kun Jiang, Alessandro Corrêa Victorino, and Ali Charara

Complex Lane Change Behavior in the Foresighted Driver Model .............................................................1747

Eggert Julian and Florian Damerow

Measurement and Management of the Lane Markings’ Stripping Ratio from In-vehicle Camera Image .................................................................................................................................................................................1755

Sakiko Nishino, Kimitake Wakayama, Md. Shoaib Bhuiyan, Haruki Kawanaka,
and Oguri Koji

Driving Maneuvers Analysis Using Naturalistic Highway Driving Data ......................................................1761

Guofa Li, Shengbo Eben Li, Lijuan Jia, Wenjun Wang, Bo Cheng, and Fang Chen

Effects of Wireless Communication on Integrated Risk Management Based Automated Vehicle ...............................................................................................................................................................................1767

Donghoon Shin, Beomjun Kim, Jongsang Seo, and Kyongsu Yi

Aerial, Marine and Surface Intelligent Vehicles

ADS-B Authentication Compliant with Mode-S Extended Squitter Using PSK Modulation .................................................................1773

Omar Yeste-Ojeda and Rene Jr. Landry

Working Zone Identification for Specialized Micro Transportation Systems Using GPS Tracks ...............................................................................................................................................................................1779

Yaguang Zhang, Andrew Balmos, James V. Krogmeier, and Dennis Buckmaster

Mutual Interference Problems Related to the Evolution of Marine Radars .....................................................1785

Gaspare Galati and Gabriele Pavan
Sensor-Based Control with Digital Maps Association for Global Navigation: A Real Application for Autonomous Vehicles ..........................................................1791
   Danilo Alves de Lima and Alessandro Corrêa Victorino

Optimal Speed Profile Generation for Airport Ground Movement with Consideration of Emissions ..........................................................1797
   Jun Chen, Michal Weiszer, and Paul Stewart

Automated Vehicle Operation, Motion Planning, and Navigation IV

Vehicle Positioning in Road Networks without GPS ..........................................................1803
   Dupuis Yohan, Pierre Merriaux, Pascal Vasseur, and Xavier Savatier

On Optimal Switches for Energy Efficient Control of a Train Considering Regenerative Braking ..........................................................1810
   Qing yuan Wang, Chao Geng, and Xiao yun Feng

Hierarchical Multi-mode High-Speed Train Speed Controller Based on H-infinity ..........................................................1817
   Huiyue Tang, Xuan Lin, Xuechao Ge, and Qingyuan Wang

System Optimal Dynamic Lane Reversal for Autonomous Vehicles ..........................................................1825
   Melissa Duell, Michael W. Levin, Stephen D. Boyles, and S. Travis Waller

Density Peaks Clustering Approach for Discovering Demand Hot Spots in City-scale Taxi Fleet Dataset ..........................................................1831
   Dongchang Liu, Shih-Fen Cheng, and Yiping Yang

Driver Assistance Systems IV

Promoting Carpooling with Distributed Schedule Coordination and Incentive Alignment of Contacts ..........................................................1837
   Dipyaman Banerjee and Biplav Srivastava

2-D Evidential Grid Mapping with Narrow Vertical Field of View Sensors Using Multiple Hypotheses and Spatial Neighborhoods ..........................................................1843
   Christoph Seeger, Michael Manz, Patrick Matters, and Joachim Hornegger

Speed Limit Sign Recognition Using MSER and Artificial Neural Networks ..........................................................1849
   Subrata Kumar Kundu and Patrick Mackens

Longitudinal Jerk Estimation for Identification of Driver Intention ..........................................................1855
   Andrea Bisoffi, Francesco Biral, Mauro Da Lio, and Luca Zaccarian

Pedestrian Recognition by Using a Dynamic Modality Selection Approach ..........................................................1862
   Adela-Maria Rus, Alexandrina Rogozan, Laura Diosan, and Abdelaziz Bensrhair

Cooperative Techniques and Systems I

Adaptable Virtual Structure Formation Tracking Control Design for Nonholonomic Tracked Mobile Robots, With Experiments ..........................................................1868
   Chang Boon Low

Study on Perception and Communication Systems for Safety of Vulnerable Road Users ..........................................................1876
   Pierre Merdrignac, Oyunchimeg Shagdar, Ines Ben Jemaa, and Fawzi Nashashibi
Dynamic Patrolling Policy for Optimizing Urban Mobility Networks .......................................................... 1882
Gavin Chase Hall, Mikhail Volkov, and Daniela Rus

Global On-line Optimization for Charging Station Allocation ........................................................................... 1890
Jean-Marc Lasgouttes

Mutual Localization and Positioning of Vehicles Sharing GNSS Pseudoranges: Sequential Bayesian Approach and Experiments ........................................................................................................... 1896
Khaoula Lassoued, Isabelle Fantoni, and Philippe Bonnifait

Automated Driving II
Towards a Framework for Testing Drivers’ Interaction with Partially Automated Driving ................................... 1902
Arie P. van den Beukel, Mascha C. van der Voort, and Arthur O. Eger

Global Trajectory Optimization on Multilane Roads .......................................................................................... 1908
M. Ruf, J. R. Ziehn, D. Willersinn, B. Rosenhahny, J. Beyerer, and H. Gotzig

A Universal Approach to Detect and Classify Road Surface Markings .......................................................... 1915
Fabian Poggenhans, Markus Schreiber, and Christoph Stiller

Generalized Path Corridor-based Local Path Planning for Nonholonomic Mobile Robot ................................ 1922
Qi Wang, Christian Sebastian Wieghardt, Yan Jiang, Jianwei Gong, and Bernardo Wagner

Automated Crossing of Intersections Controlled by Traffic Lights ................................................................. 1928
Alessandro Mazzalai, Francesco Biral, Mauro Da Lio, Marco Darin, and Leandro D’Orazio

Special Session — Its for Public Transport II
Tram-Based Mobility Mining with Event Processing of Transit-Card Transactions ........................................... 1934
Fernando Terroso-Saenz, Mercedes Valdes-Vela, and Antonio F. Skarmeta-Gomez

A Mixed Load Solution for the Rural School Bus Routing Problem ............................................................. 1940
Cristiano Maciel Silva, João F. M. Sarubbi, Daniel Fonseca Silva, Marcelo F. Porto, and Nilson T. R. Nunes

Distributed Automated Vehicle Location (AVL) System Based on Connected Vehicle Technology ..................... 1946
Piotr Smietanka, Krzysztof Szczypiorski, Francesco Viti, and Sreedynski Marcin

Steds: Social Media Based Transportation Event Detection with Text Summarization ...................................... 1952
Kaiqun Fu, Chang-Tien Lu, Rakesh Nune, and Jason Xianding Tao

Real-Time Estimation of Pedestrian Inflow Rates from Saturated Sensor Counting Data in a Complex Metro Station .......................................................................................................................... 1958
Martin Stubenschrott, Thomas Matyus, and Christian Kogler

Special Session — Cooperation in Complex Networks of Vehicles II
Interaction Protocols for Cooperative Merging and Lane Reduction Scenarios ............................................. 1964
Elham Semsar Kazerooni and Jeroen Ploeg

Interaction Protocol for Highway Platoon Merge ............................................................................................ 1971
Hoai Hoang Bengtsson, Lei Chen, Alexey Voronov, and Cristofer Englund
String Stable Heterogeneous Vehicle Platoon Using Cooperative Adaptive Cruise Control .................................................................................................................................1977
  Cong Wang and Henk Nijmeijer

Aperiodic Consensus Control for Tracking Nonlinear Trajectories of a Platoon of Vehicles .............................................................................................................................1983
  Carlos Santos, Felipe Espinosa, Enrique Santiso, Miguel Martinez, and Manuel Mazo Jr.

Approaches for Facilities Layer Protocols for Platooning .........................................................................................................................1989
  Carl Bergenheim

Industry Track IV

  Irene Cara and Erwin de Gelder

A Data Analysis Framework to Rank HGV Drivers .............................................................................................................................2001
  Grazziela P. Figueredo, Philip R. Quinlan, Mohammad Mesgarpour, Jonathan M. Garibaldi, and Robert I. John

Are Truck Drivers Ready to Save Fuel? The Objective and Subjective Effectiveness of an Ecological Driver Assistance System .................................................................2007
  Michael Henzler, Alisa Boller, Michael Buchholz, and Klaus Dietmeyer

Virtual Laboratory for On-board ETCS Equipment ...............................................................................................................................2013
  Gonzalo Solas, Leonardo J. Valdivia, Javier Añorga, Adam Podhorski, Jaizki Mendizabal, Stanislas Pinte, and Luis Marcos

Safety Performance Assessment of Assisted and Automated Driving by Virtual Experiments: Stochastic Microscopic Traffic Simulation as Knowledge Synthesis ..................................................2019
  Thomas Helmer, Lei Wang, Klaus Kompass, and Ronald Kates

Advanced Vehicle Safety Systems VIII

Supervised Learning via Optimal Control Labeling for Criticality Classification in Vehicle Active Safety .................................................................................................................................2024
  Stephan Herrmann, Wolfgang Utschick, Michael Botsch, and Frank Keck

Vision-Based Driver Assistance Systems: Survey, Taxonomy and Advances .................................................................2032
  Jonathan Horgan, Ciarán Hughes, John McDonald, and Senthil Yogamani

Automatic Emergency Steering with Distracted Drivers: Effects of Intervention Design .................................................................2040
  Markus Sieber, Karl-Heinz Siedersberger, Andreas Siegel, and Berthold Färber

Real Time Estimation of Drivers’ Behaviour ...............................................................................................................................2046
  Julien Monteil, Niall O’Hara, Vinny Cahill, and Mélanie Burouche

Robust Rear Light Status Recognition Using Symmetrical SURFs .................................................................................................................................2053
  Li-Chih Chen, Jun-Wei Hsieh, Shyi-Chy Cheng, and Zi-Ran Yang
Air Traffic Management
An Evolutionary Multi-objective Approach for Stochastic Air Traffic Network Flow Optimization ............................................................................................................................................................................................................................................2059
Mingming Xiao, Kaiquan Cai, and Florian Linke

A Scenario-Based Optimization Approach to Robust Estimation of Airport Capacity .................................................................2066
Fei Ju, Kaiquan Cai, Yang Yang, and Yuan Gao

Two-Layer Optimization to Cooperative Conflict Detection and Resolution for UAVs .................................................................2072
Jian Yang, Dong Yin, Qiao Cheng, and Xu Xie

Preference-Based Evolutionary Algorithm for Airport Runway Scheduling and Ground Movement Optimisation .................................................................2078
Michal Weiszer, Jun Chen, and Paul Stewart

Trajectory Option Set Planning Optimization under Uncertainty in CTOP .................................................................2084
Leonardo Cruciol, John-Paul Clarke, and Li Weigang

Automated Vehicle Operation, Motion Planning, and Navigation V
Planning of High-Level Maneuver Sequences on Semantic State Spaces .................................................................2090
Ralf Kohlhaas, Daniel Hammann, Thomas Schamm, and J. Marius Zöllner

Impact of Automation on the Capacity of a Mainline Railway: A Preliminary Hypothesis and Methodology .................................................................2097

Congestion Free Vehicle Scheduling Using a Route Reservation Strategy .................................................................2103
Charalambos Menelaou, Panayiotis Kolios, Stelios Timotheou, and Christos G. Panayiotou

A Global Navigation Management Architecture Applied to Autonomous Robots in Urban Environments .................................................................2109
Ide-Flore Kenmogne, Danilo Alves de Lima, and Alessandro Corrêa Victorino

An Efficient Scene Semantic Labeling Approach for 3D Point Cloud .................................................................2115
Tianyi Wang, Jian Li, and Xiangjing An

Traffic Theory, Modelling and Control II
Travel Time and Point Speed Fusion Based on a Macroscopic Traffic Model and Non-linear Filtering .................................................................2121
David Gundlegård, Andreas Allström, Erik Bergfeldt, Alexandre M. Bayen, and Rasmus Ringdahl

Macroscopic Modelling and Simulation of ACC and CACC Traffic .................................................................2129
Ioannis K. Nikolos, Anargiros I. Delis, and Markos Papageorgiou

Optimization-Based Clustering of Traffic Networks Using Distinct Local Components .................................................................2135
Mohammadreza Saeedmanesh and Nikolas Geroliminis

Impact of Traffic State Transition and Oscillation on Highway Performance with Section-Based Approach .................................................................2141
Simon Oh, Young-Ji Byon, and Hwasoo Yeo

xxx
Robust Traffic Density Estimation Using Discontinuous Galerkin Formulation of a Macroscopic Model .................................................................2147

Tigran T. Tchrakian, Sergiy Zhuk, and Alberto Costa Nogueira Jr.

Cooperative Techniques and Systems II

Evaluating Defence Schemes Against Jamming in Vehicle Platoon Networks .................................................................2153

Georgios Patounas, Yan Zhang, and Stein Gjessing

Structuring Cooperative Behavior Planning Implementations for Automated Driving ...........................................................2159

Simon Ulbrich, Simon Grossjohann, Christian Appelt, Kai Homeier, Jens Rieken, Pieter Vansteenwegen, and Chris Tampère

An Integrated Perspective on Traffic Management and Logistic Optimization .................................................................2166

Rodrigo Rezende Amaral, El-Houssaine Aghezzaf, Marco Rinaldi, Willem Himpe, Pieter Vansteenwegen, and Chris Tampère

Goal-Driven Context-Aware Data Filtering in IoT-Based Systems .........................................................................................2172

Nanjangud Narendra, Karthikeyan Ponnalagu, Aditya Ghose, and Srikanth Tamilselvam

Recursive State Estimation for Lane Detection Using a Fusion of Cooperative and Map Based Data .................................................2180

Patrick Lorenz, Bernd Schäufele, Oliver Sawade, and Ilja Radusch

Simulation and Modelling I

A Framework for Complex Scenarios for Vehicle Platoons .................................................................................................2186

Lars Stranden

Clothoid-Based Speed Profiler and Control for Autonomous Driving .....................................................................................2194

Pedro F. Lima, Marco Trincavelli, Jonas Mårtensson, and Bo Wahlberg

Mutual Coupling Research of Multi-antenna in Dual-Channel Balise .........................................................................................2200

Linfu Zhu, Huibing Zhao, Di Liang, and Ruigang Song

Approximating the Effects of Installed Traffic Lights: A Behaviorist Approach Based on Travel Tracks ........................................2205

Shumeet Baluja, Michele Covell, and Rahul Sukthankar

Macroscopic Modelling and Simulation of Multi-lane Traffic .................................................................................................2213

Anargiros I. Delis, Ioannis K. Nikolos, and Markos Papageorgiou

Data Mining and Data Analysis V

Traffic Flow Decomposition and Prediction Based on Robust Principal Component Analysis .........................................................2219

Xingxing Xing, Xiabing Zhou, Haikun Hong, Wenhao Huang, Kaigui Bian, and Kunqing Xie

Evaluating the Effect of Time Series Segmentation on STARIMA-Based Traffic Prediction Model .........................................................2225

Athanasios Salamanis, Polykarpos Meladianos, Dionysohs Kehagias, and Dimitrios Tzovaras

Towards Robust and Accurate Traffic Prediction Using Parallel Multiobjective Genetic Algorithms and Support Vector Regression ...........................................................................2231

Jiri Petrik and Lukas Sekanina
Identifying Curve Reaction Point Using NDS Data

Shauna Hallmark, Nicole Oneyear, Bo Wang, Samantha Tyner, Cher Carney, and Dan McGehee

Reliability of Probe Speed Data for Detecting Congestion Trends

Yaw Adu-Gyamfi, Anuj Sharma, Skylar Knickerbocker, Neal Hawkins, and Michael Jackson

Data Mining and Data Analysis VI

DynaMIT2.0: Architecture Design and Preliminary Results on Real-Time Data Fusion for Traffic Prediction and Crisis Management

Yang Lu, Ravi Seshadri, Francisco Pereira, Aidan O’Sullivan, Constantinos Antoniou, and Moshe Ben-Akiva

Travel Time Estimation Using Speed Predictions

Aditya Narayanan, Nikila Mitrovic, Muhammad Tayyab Asif, Justin Dauwels, and Patrick Jaillet

Hybrid Multi-metric K-Nearest Neighbor Regression for Traffic Flow Prediction

Haikun Hong, Wenhao Huang, Xingxing Xing, Xiabing Zhou, Hongyu Lu, Kaigui Bian, and Kunqing Xie

Prediction of Deceleration Amount of Vehicle Speed in Snowy Urban Roads Using Weather Information and Traffic Data

Ryosuke Tanimura, Akihito Hiromori, Takaaki Umedu, Hirozumi Yamaguchi, and Teruo Higashino

Automatic Critical Event Extraction and Semantic Interpretation by Looking-Inside

Sujitha Martin, Eshed Ohn-Bar, and Mohan M. Trivedi

Industry Track V

Large-Scale Evaluation of an Active Safety Algorithm with EuroNCAP and US NCAP Scenarios in a Virtual Test Environment — An Industrial Case Study

Christian Berger, Delf Block, Christian Hons, Stefan Kühlner, André Leschke, Dimitri Plotnikov, and Bernhard Rumpe

Systemic Evaluation of the HERO-Based Ramp Metering Algorithm Using Microsimulation: Demonstration Analysis Using a Sydney Motorway

Nima Amini, Hanna Grzybowska, Kasun Wijayarathna, and S. Travis Waller

Concept for an Intermodal Traveller Information System with Real-Time Data Using Complex Event Processing

Olga Birth, Michael Hoffmann, Markus Strassberger, Roman Roor, and Johann Schlichter

A Framework for Appraising European Member States’ Readiness Level for eCall Deployment

Selini Natalia Hadjidimitriou and Risto Öörni

SCADA Systems in the Railway Domain: Enhancing Reliability through Redundant MultipathTCP

Igor Lopez, Marina Aguado, Christian Pinedo, and Eduardo Jacob
# Advanced Vehicle Safety Systems IX

- **Blind Area Traffic Prediction Using High Definition Maps and LiDAR for Safe Driving**
  
  *Eijiro Takeuchi, Yuki Yoshihara, and Ninomiya Yoshiki*  
  
  2311

- **Stereo-Vision-Based Pedestrian’s Intention Detection in a Moving Vehicle**
  
  *Sebastian Köhler, Michael Goldhammer, Klaus Zindler, Konrad Doll, and Klaus Dietmeyer*  
  
  2317

- **Video and LiDAR Based Object Tracking Using Small-Region Growth**
  
  *Yong Fang, Cindy Cappelle, and Yassine Ruichek*  
  
  2323

- **Driver Capability Monitoring in Highly Automated Driving: From State to Capability**
  
  *Joel Gonçalves, Cristina Olaverri-Monreal, and Klaus Bengler*  
  
  2329

- **An Exploration of Why and When Pedestrian Detection Fails**
  
  *Rakesh Nattoji Rajaram, Eshed Ohn-Bar, and Mohan M. Trivedi*  
  
  2335

- **Traffic Light Detection: A Learning Algorithm and Evaluations on Challenging Dataset**
  
  *Mark Philip Philipsen, Morten Borns Jensen, Andreas Møgelmose, Thomas B. Moeslund, and Mohan M. Trivedi*  
  
  2341

# Driver Assistance Systems V

- **Fused Raised Pavement Marker Detection Using 2D-Lidar and Mono Camera**
  
  *Tran Tuan Nguyen, Jens Spehr, Tsung-Han Hank Lin, and Daniel Lipinski*  
  
  2346

- **Robust Face Detection with Eyes Occluded by the Shadow from Dazzling Avoidance System**
  
  *Xiangpeng Liu and Axel Graeser*  
  
  2352

- **A Real-Time Applicable Dynamic Hand Gesture Recognition Framework**
  
  *Thomas Kopinski, Alexander Gepperth, and Uwe Handmann*  
  
  2358

- **Fast Pedestrian Detection for Mobile Devices**
  
  *Arthur Daniel Costea, Andreea Valeria Vesa, and Sergiu Nedevschi*  
  
  2364

- **Improve Safety by Optimal Steering Control of a Converter Dolly Using Particle Swarm Optimization for Low-Speed Maneuvers**
  
  *Mohammad Manjurul Islam, Leo Laine, and Bengt Jacobson*  
  
  2370

- **Modeling Driver Behavior at Intersections with Takagi-Sugeno Fuzzy Models**
  
  *Saina Ramyar, Mohammad Gorji Sefidmazgi, Seifemichael Amsalu, Ali Karimoddini, Arda Kurt, and Abdollah Homaiifar*  
  
  2378

# Traffic Control

- **Dynamic Pricing Algorithm with Embedded Controller for High Occupancy Toll Lanes**
  
  *Guangyu Zou, Gil Alvaro, and Rakesh Kulkarni*  
  
  2384

- **Geometry Based Analysis of an Alternative RFID Interrogator Placement for Electronic Vehicle Identification**
  
  *Alwyn Jakobus Hoffman, Albertus Pretorius, and Yifan Wang*  
  
  2390
Closed Loop Optimal Adaptive Traffic Signal and Ramp Control: A Case Study on Downtown Toronto
Samah El-Tantawy, Kasra Rezaee, and Baher Abdulhai ................................................................. 2398

A System for Incident Detection in Urban Traffic Networks
Yaser E. Hawas and Mohammad Sheriff Mohammad ................................................................. 2405

Adaptive Group-Based Signal Control Using Reinforcement Learning with Eligibility Traces
Junchen Jin and Xiaoliang Ma ........................................................................................................ 2412

Iterative Tuning Strategy for Setting Two-Way Offset by Using Histogram of Traffic Flows in Traffic Signal Control
Yu Wang, Danwei Wang, Shangtai Jin, Nan Xiao, Yitong Li, and Emilio Frazzoli ............................. 2418

Cooperative Automated Vehicles
A Flexible Leader-Follower Formation Tracking Control Design for Nonholonomic Tracked Mobile Robots with Low-Level Velocities Control Systems
Chang Boon Low .......................................................................................................................... 2424

Online Optimal Control of Connected Vehicles for Efficient Traffic Flow at Merging Roads
Jackeline Rios-Torres, Andreas Malikopoulos, and Pierluigi Pisu .................................................. 2432

Learning Traffic Light Parameters with Floating Car Data
Valentin Protschky, Christian Ruthhammer, and Stefan Feit .......................................................... 2438

Towards Evaluating the Benefits of Inter-vehicle Coordination
Niall O’Hara, Marco Slot, Julien Monteil, Vinny Cahill, and Mélanie Bouroche ............................... 2444

Mitigating Congestion at Sags with Adaptive Cruise Control Systems
Alexandros E. Papacharalampous, Meng Wang, Victor L. Knoop, Bernat Goñi Ros,
Toshimichi Takahashi, Ichiro Sakata, Bart van Arem, and Serge P. Hoogendoorn ......................... 2451

Emergency, Automation Off: Unstructured Transition Timing for Distracted Drivers of Automated Vehicles
Brian Mok, Mishel Johns, Key Jung Lee, David Miller, David Sirkin, Page Ive, and Wendy Ju ........... 2458

Sensing, Vision and Perception III
LIDAR Road Edge Detection by Heuristic Evaluation of Many Linear Regressions
Thomas Drage, Thomas Churack, and Thomas Braun ................................................................. 2465

Bernardes Vitor Giovani, Alessandro Corrêa Victorino, and Janito Vaqueiro Ferreira ....................... 2471

3D Lane Boundary Tracking Using Local Linear Segments
Max Theo Schmidt, Ulrich Hofmann, and Stephan Neumaier ....................................................... 2477

Conditional Monte Carlo Dense Occupancy Tracker
Lukas Rummelhard, Amaury Nègre, and Christian Laugier .......................................................... 2485

Stereo Augmented Detection of Lane Marking Boundaries
Michael Smart and Steven L. Waslander .......................................................................................... 2491
Towards a Multi-hypothesis Road Representation for Automated Driving ...........................................................2497

Frank Dierkes, Marvin Raaijmakers, Max Theo Schmidt, Mohamed Essayed Bouzouraa, Ulrich Hofmann, and Markus Maurer

Positioning I

GPS/GNSS Consistency in a Multi-path Environment and During Signal Outages ..............................................2505
Stewart Worrall, James Ward, Asher Bender, and Eduardo M. Nebot

LaneSLAM — Simultaneous Pose and Lane Estimation Using Maps with Lane-Level Accuracy .................................................................2512
Toni Heidenreich, Jens Spehr, and Christoph Stiller

Coupling Outlier Detection with Particle Filter for GPS-Based Localization ..........................................................2518
Salim Zair, Sylvie Le Hégarat-Mascel, and Emmanuel Seignez

Collaborative Vehicle Self-Localization Using Multi-GNSS Receivers and V2V/V2I Communications ............................................................2525
Luis Conde, Rafael Chelim, and Urbano Nunes

GNSS/INS/On-board Camera Integration for Vehicle Self-Localization in Urban Canyon ..............................................2533
Kamijo Shunsuke, Gu Yanlei, and Li-Ta Hsu

Pedestrian Guidance for Public Transport Users in Indoor Stations Using Smartphones ...........................................2539
Olaf Czogalla and Sebastian Naumann

Data Management and Geographic Information Systems I

Vehicle Assisted Data Update for Temporal Information Service in Vehicular Networks ........................................2545
Penglin Dai, Kai Liu, Edwin Sha, Qingfeng Zhuge, Victor Lee, and Sang Hyuk Son

Assessment of Areas Exposed to Damage by Dangerous Goods Transportation: Application of Analytic Hierarchy Process Method for Land Covers Weighing ..............................................................................................................2551
Paolo Gandini, Luca Studer, Fabio Borghetti, Rosanna Iuliano, and Giuseppe Pastorelli

Fast Hidden Markov Model Map-Matching for Sparse and Noisy Trajectories ..............................................................2557
Hannes Koller, Peter Widhalm, Melitta Dragaschnig, and Anita Graser

Supporting Dispatch Decisions for the Fire and Rescue Services ........................................................................2562
Tobias Andersson Granberg, Jonas Lundberg, Anna Ulander, and Rego Granlund

Identifying Users and Use of (Electric-) Free-Floating Carsharing in Berlin and Munich .............................................2568
Johannes Mueller, Stefan Schmoeller, and Flemming Giesel

ComeWithMe: An Activity-Oriented Carpooling Approach ..............................................................................................2574
Vinicius Monteiro de Lira, Valeria Cesario Times, Chiara Renso, and Salvatore Rinzivillo

Energy Efficiency

Energy-Efficient Operation of Single Train Based on the Control Strategy of ATO ..................................................2580
Shuqi Liu, Fang Cao, Jing Xun, and Yihui Wang

Exploiting Pretended Networking for Energy Saving in Automotive Networks ........................................................2587
Wei Hong, Salman Siddiqui, Alexander Viehl, Oliver Bringmann, and Wolfgang Rosenstiel
Incentive-Based Multi-objective Fractional Optimization for EV Navigation System with Successive Update ...........................................................................................................................................2594
   Shun Maeda, Tomohisa Hayakawa, Jun-Ichi Imura, Hideaki Tanaka, and Yuki Mae

GUIATE, A System for Urban Parking Areas Management ..............................................................................................................................2600
   Juan Alberto Vera Gómez, Alexis Quesada-Arencibia, C. R. García, R. Suárez Moreno, and F. Guerra Hernández

An Energy-Efficient Operation Approach Based on the Utilization of Regenerative Braking Energy Among Trains ...................................................................................................................................2606
   Erchao Chen, Bing Bu, and Sun Wenzhe

Learned Optimal Control of a Range Extender in a Series Hybrid Vehicle ..........................................................................................................................2612
   Alexander Styler, Andreas Sauer, Illah Nourbakhsh, and Hermann Rottengruber

Industry Track VI

Autonomous Valet Parking System Architecture ...........................................................................................................................................................2619
   Mihai Chirca, Roland Chapuis, and Roland Lenain

Diversification of Route Planning Results for Improved User Satisfaction ..............................................................................................................................................2625
   Hoang Tam Vo, Peng Ni, Chengbin Yan, Thirumurugan Eswaran, Jugal Shah, and Bob Massarczyk

Arrival Times with Hours of Service Regulations for Truck Drivers-Tracks and Gaps from Current Research ..............................................................................................................................................2631
   Gideon Mbiydzenyuy

Intelligent Driver Monitoring Based on Physiological Sensor Signals: Application Using Camera ........................................................................................................................................................................................................2637
   Hamidur Rahman, Shaibal Barua, and Begum Shahina

Influence of the Sensor Local Track Covariance on the Track-to-Track Sensor Fusion .............................................................................................................2643
   Bharanidhar Duraisamy and Tilo Schwarz

Track to Track Fusion Incorporating Out of Sequence Track Based on Information Matrix Fusion .................................................................................................................................2651
   Bharanidhar Duraisamy and Tilo Schwarz

Simulation and Modelling II

Robustness Evaluation and Improvement for Vision-Based Advanced Driver Assistance Systems ................................................................................................................................................................................................2659
   Stefan Müller, Dennis Hospach, Oliver Bringmann, Joachim Gerlach, and Wolfgang Rosenstiel

Co-simulation Testing of Data Communication System Supporting CBTC .......................................................................................................................2665
   Tao Wen, Xinnan Lyu, David Kirkwood, Lei Chen, Costas Constantinou, and Clive Roberts

Stabilization of 3D Pavement Images for Pothole Metrology Using the Kalman Filter ..........................................................................................................................2671
   Abdullah Rasheed, Khurram Kamal, Tayyab Zafar, Senthan Mathavan, and Mujib Rahman

Economic Analysis Based on the Interrelationships of the OLEV System Components .........................................................................................2677
   Hyukjoon Lee and Dong Ho Cho

xxxvi
An Algorithm for Identifying Red Light Runners from Radar Trajectory Data .........................................................2683
  Donia Zaheri and Montasir Abbas

Simulation of Signal Transmission in Motion Simulator Using Controller Area Network (CAN-bus) ..............................................................2688
  Yuri Vershinin, Basil Nnadiekwe, and Sebastian Schulz

Positioning II
An Optimization Technique for Positioning Multiple Maps for Self-Driving Car’s Autonomous Navigation ..........................................................2694
  Salvador Dominguez, Bodgan Khomutenko, Gaëtan Garcia, and Philippe Martinet

Improving SLAM with Drift Integration ..........................................................2700
  Guillaume Bresson, Romuald Aufrère, and Roland Chapuis

Map-Matching Cell Phone Trajectories of Low Spatial and Temporal Accuracy ..................................................................................2707
  Gunnar Schulze, Christopher Horn, and Roman Kern

Particle Filter Based Non-Line-of-Sight Mitigation for Precise GNSS Vehicle Localization ........................................................................2715
  Sven Bauer, Robin Streiter, Marcus Obst, and Gerd Wanielik

A Framework for Outdoor Urban Environment Estimation .........................................................................................2721
  Augusto Luis Ballardini, Simone Fontana, Axel Furlan, Dario Limongi, and Domenico Giorgio Sorrenti

Improving Urban Vehicle Localization with Traffic Sign Recognition .......................................................................................2728
  Andre Welzel, Pierre Reisdorf, and Gerd Wanielik

Data Management and Geographic Information Systems II
A Scalable Spatio-temporal Data Storage for Intelligent Transportation Systems Based on HBase ..........................................................2733
  Hong Van Le and Atsuhiro Takasu

Yellow Signal Driver Crossing Behavior .........................................................................................2739
  Hillel Bar-Gera, Edna Schechtman, Tal Ze’evi, and Oren Musicant

Spatial Analysis of Bicycle Crashes in Chile .........................................................................................2745
  Carola Blazquez, Isabel Puelma, and Ghazan Khan

Investigating Surrogate Point-Based Modeling Approach for Covering Continuous Spatial Demand ........................................................................2751
  Pei-Shan Hsieh, Wei-Hua Lin, Mingyao Qi, and Daoqin Tong

Mixture-Model-Based Clustering for Daily Traffic Volumes .........................................................................................2757
  Yu Hu and Hans Hellendoorn

Geometric Congestion Detection Algorithms in the Speed-Flow and Flow-Density Spaces ......................................................................................2763
  Emily Moylan, David Rey, and S. Travis Waller
## Public Transportation Management

Crosswalk Detection Based on MSER and ERANSAC ................................................................. 2770  
*Yuqiang Zhai, Guolong Cui, Qin Gu, and Lingjiang Kong*

An Adaptive Algorithm for Public Transport Arrival Time Prediction Based  
on Hierarchical Regression ........................................................................................................ 2776  
*Anton Agafonov and Vladislav Myasnikov*

Mixed-integer Programming for a New Bus-lane Reservation Problem ..................................... 2782  
*Peng Wu, Feng Chu, and Che Ada*

Predicting Home and Work Locations Using Public Transport Smart Card Data  
by Spectral Analysis .................................................................................................................. 2788  
*Guangxia Li, Liang Yu, Wee Siong Ng, Wei Wu, and Shen Tat Goh*

Improving Bus Service Reliability with Stochastic Optimization ............................................ 2794  
*Konstantinos Gkiotsalitis and Nitin Maslekar*

Measuring Realistic Transit Network Connectivity: A View with Travel Time Reliability .......... 2800  
*Lina Fu and John Handley*

## Road and Rail Traffic Modelling and Management II

Highway Traffic State Estimation with Mixed Connected and Conventional Vehicles  
Using Speed Measurements ...................................................................................................... 2806  
*Nikolaos Bekiaris-Liberis, Claudio Roncoli, and Markos Papageorgiou*

On-street Parking Statistics Using LiDAR Mobile Mapping ....................................................... 2812  
*Fabian Bock, Daniel Eggert, and Monika Sester*

On the Complexity of Congestion Free Routing in Transportation Networks  
.................................................................................................................................................. 2819  
*Charalambos Menelaou, Panayiotis Kolios, Stelios Timotheou, and Christos Panayiotou*

Urban Railway Operation Recovery During Disruption ............................................................... 2825  
*Amin Jamili and Mohamadreza Ghoreshi Nejad*

An Introduction to Agent-Based User Equilibria ....................................................................... 2831  
*Peter Wagner*

## Theory and Models for Optimization and Control

Smoothening for Efficient Solution of Model Predictive Control for Urban Traffic  
Networks Considering Endpoint Penalties .................................................................................. 2837  
*Anahita Jamshidnejad, Hans Hellendoorn, Shu Lin, and Bart De Schutter*

Pareto Efficient Policy for Supervisory Power Management Control ......................................... 2843  
*Andreas Malikopoulos*

Customer-Oriented Optimal Vehicle Assignment in Mobility-on-Demand Systems .................. 2849  
*Francesco Acquaviva, Alfredo Nunez Vicencio, Donato Di Paola, Alessandro Rizzo,  
and Bart De Schutter*

*Stelios Timotheou, Christos Panayiotou, and Marios Polycarpou*
Vehicle Speed Prediction in a Convoy Using V2V Communication .................................................................2861
   Junbo Jing, Arda Kurt, Engin Ozatay, John Michelini, Dimitar Filev, and Umit Ozguner

Travel Behavior and Information Guidance
A Resilient Real-Time Traffic Control System ..................................................................................................2869
   Ahmed Serageldin and Axel Krings
A Method of Traffic Travel Status Segmentation Based on Position Trajectories ...........................................2877
   Yun Shen, Honghui Dong, Limin Jia, Yong Qin, Fei Su, Mingchao Wu, Kai Liu, Pan Li,
   and Zhao Tian
A Monitoring System to Understand Postal Motorcyclist’s Driving Behavior ....................................................2883
   Junghee Jo, Hyunsuk Kim, Hongkyu Park, and Daesub Yoon
Impact of Travelers Information Level on Disturbed Transit Networks: A Multiagent Simulation .......................2889
   Mahdi Zargayouna, Amine Othman, Gérard Scemama, and Besma Zeddini
Acceleration of Map Matching for Floating Car Data by Exploiting Travelling Velocity ................................2895
   Zeng Zhe and Tong Zhang
Agent Based Framework for Modeling Operations at Isolated Signalized Intersections ....................................2900
   Isaac K. Isukapati and George F. List

Data Mining and Data Analysis VII
On Identifying Dynamic Intersections in Large Cities ..........................................................................................2907
   Jordan Ivanchev, Heiko Aydt, and Alois Knoll
Collecting Simulation Scenarios by Analyzing Physical Test Drives ................................................................2915
   Pascal Minnerup, Tobias Kessler, and Alois Knoll
Estimating Traffic Flow Rate on Freeways from Probe Vehicle Data and Fundamental Diagram .......................2921
   Khairul Anuar, Filmon Habtemichael, and Mecit Cetin
Segmenting Highway Network Based on Speed Profiles ..................................................................................2927
   Russel Aziz, Manav Kedia, Soham Dan, Sudeshna Sarkar, Sudeshna Mitra, and Pabitra Mitra
Driving Behavior Signals and Machine Learning: A Personalized Driver Assistance System ........................2933
   María Victoria Martínez, Ines Del Campo, Javier Echanobe, and Koldo Basterretxea

Data Mining and Data Analysis VIII
Using Twitter to Enhance Traffic Incident Awareness ......................................................................................2941
   Shen Zhang
Impacts of Traffic Conditions on the Performance of Road Freight Transport .................................................2947
   Ksenia Sigakova, Gideon Mbiydzenyuy, and Johan Holmgren
On Performance Evaluation of Driver Hand Detection Algorithms: Challenges, Dataset, and Metrics ..............2953
   Nikhil Das, Eshed Ohn-Bar, and Mohan M. Trivedi
