Session 1: Security, Encryption, and Reliability

A Chaos-Based Hash Function .................................................................1
Qi Wu

A Novel Implementation of a Hash Function Based on XML DOM Parser .................................................................5
Dandan Yang, Zhiqiang Wei, and Yongquan Yang

Kernel Malware Core Implementation: A Survey .....................................................9
XiangYu Li, Yi Zhang, and Yong Tang

Simulation of the Users’ Email Behavior Based on BP-BDI Model .................................................................16
Yu Sheng, Jiang Rong, and Wang Xiang

A Hierarchical Framework of Security Situation Assessment for Information System ........................................23
Yiyang Jia, Hanyan Wu, and Dongxing Jiang

XSS Vulnerability Detection Using Optimized Attack Vector Repertory .................................................................29
Xiaobing Guo, Shuyuan Jin, and Yaxing Zhang

A 4-Dimensional Discrete Chaotic System and Application in Image Encryption with Avalanche Effects .................................................................37
Shujie Yang, Lequan Min, and E. Chen

Advanced Classification Lists (Dirty Word Lists) for Automatic Security Classification ........................................44
Paal E. Engelstad, Hugo Hammer, Anis Yazidi, and Aleksander Bai
Analysis of Time-Dependencies in Automatic Security Classification .................................................................54
Paal E. Engelstad, Hugo Hammer, Anis Yazidi, and Aleksander Bai

Session 2: Authentication, Key, Privacy, and Security

A Mixed Encryption Algorithm Used in Internet of Things Security Transmission
System ..........................................................................................................................................................................62
Mingyuan Xin

Recovery of Evidence and the Judicial Identification of Electronic Data Based
on ExFAT .....................................................................................................................................................................66
Ma Guofu, Wang Zixian, and Cheng Yusi

A CIM System for Use in the UCWW .........................................................................................................................72
Ivan Ganchev, Zhanlin Ji, Mairtin O’Droma, and Chenxu Dai

Application and Management of Cybersecurity Measures for Protection and Control ........................................76
Dennis Holstein, T.W. Cease, and Maik G. Seewald

Android Malware Detection Based on Static Analysis of Characteristic Tree ....................................................84
Qi Li and Xiaoyu Li

The Multilinear Maps Based Certificateless Aggregate Signcryption Scheme ...........................................................92
Han Yiliang and Chen Fei

Randomized Ring-Partition Fingerprinting with Dithered Lattice Vector Quantization .......................................100
Cheolkon Jung and Lihui Cao

A “Dynamic Tunnel” Defense Mechanism Based on GTP Protocol .....................................................................104
Zhang Qing and Liu Caixia

Session 3: Distributed Architecture, System, and Applications

An Application of Horizontal and Vertical Integration in Cyber-Physical Production
Systems .......................................................................................................................................................................110
Qiong Liu, Junming Chen, Yuanquan Liao, Egon Mueller, David Jentsch, Frank Boerner, and Mingliang She

A Decentralized Load Balancing Architecture for Cache System .............................................................................114
Mengjing Song, Hui Li, and Hao Wu

Probabilistic Event Processing with Negation Operators in Cyber Physical Systems ........................................120
Na Mao and Jie Tan

Transformer Fault Diagnosis Algorithm Based on Entropy-Weighting Information
Bottleneck Method .....................................................................................................................................................127
HongXing Lu, YangDong Ye, and Gang Chen

Data Driven Condition Monitoring of Wind Power Plants Using Cluster Analysis .............................................131
Peng Li, Jens Eickmeyer, and Oliver Niggemann
Session 4: Algorithms, Theory, and Protocols

Resource Optimization Strategy in Optical Grid Supporting Multi-channel Transmission

A Fast Parallel Genetic Algorithm for Graph Coloring Problem Based on CUDA

Buhua Chen, Bo Chen, Hongwei Liu, and Xuefeng Zhang

A Collocation Method for Weakly Singular Fredholm Integral Equation

Xiao-Ya Lv and Wei-Hua Luo

Asymmetric Slepian-Wolf Coding Design with Spatially Coupled LDPC Convolutional Codes

Shumin Tu

Generalized Stability Theorem for Non-autonomous Differential Equation with Application

Mei Zhang, Lequan Min, and Xiuping Yang

Graph-Based Method for Detecting Occupy Protest Events Using GDELT Dataset

Fengcai Qiao, Pei Li, Jingsheng Deng, Zhaoyun Ding, and Hui Wang

The Relation of Energy-Consumption and the Population of People

HongLiang Liang and HongYan Cui

A Hybrid Model for Experts Finding in Community Question Answering

Hai Li, Songchang Jin, and Shudong LI

Distributed Self-Diagnosis Algorithm for VoIP Service over IMS Network

Jingxian Lu, Christophe Dousson, and Francine Krief

Voting Based Seeding Algorithm for Overlapping Community Detection

Yanmei Hu, Kaiyang Hu, Bo Yang, Nan Zhang, and Xiaohui Gu

Session 5: Big Data Algorithm

Network User Interest Pattern Mining Based on Entropy Clustering Algorithm

Changda Xu, Shuoying Chen, and Jing Cheng

Aggregation Encoding: Reducing Network Traffic for Big Data Erasure-Coded Storages

Jing Zhang, Shanshan Li, Xiangke Liao, and Xiaodong Liu

A Topic Detection Method Based on Microblog Weight

Kaijie Guo and Liang Shi

TSM: Efficient Thermal and Server Management for Greening Data Centers

Jianxiong Wan, Gefei Zhang, Limin Liu, and Ran Zhang
Feature Extraction Algorithm and Optimization for Mass TV Audience .................................................................217
  Fan Zhang, Zheng Chen, and Jinyao Yan

An Improved Parallel Algorithm of Genetic Programming Based on the Framework of MapReduce ............................................................221
  Zhang Song, Ma Jun, Zhao Yang-Yang, and Liu Qiong

Hadoop Job Scheduling Based on Mixed Ant-Genetic Algorithm .............................................................226
  Xiaofei Huang, Hui Zhou, and Wei Wu

A Big Data Online Cleaning Algorithm Based on Dynamic Outlier Detection ..................................................230
  Yinglong Diao, Ke-Yan Liu, Xiaoli Meng, Xueshun Ye, and Kaiyuan He

Mining High Utility Itemsets over Uncertain Databases ........................................................................235
  Yuqing Lan, Yang Wang, Yanni Wang, Shengwei Yi, and Dan Yu

Semi-supervised Bi-dictionary Learning Using Smooth Representation-Based Label Propagation ..................239
  Meng Jian and Cheolkon Jung

  Xu Chen and Na Deng

Session 6: Big Data Analytical and Cloud

An Overview of Event Extraction from Twitter .......................................................................................251
  Jingsheng Deng, Fengcai Qiao, Hongying Li, Xin Zhang, and Hui Wang

A Deep Learning Method Combined Sparse Autoencoder with SVM ......................................................257
  Yao Ju, Jun Guo, and Shuchun Liu

Understanding User Behavior in Large Scale Internet Video Service .........................................................261
  Yawei He, Anming Wei, Wenhui Zhang, and Hui Xiao

Empirical Study on Alignment of Cloud Computing in Enterprises .........................................................268
  Shao Mingxing, Peng Long, and Fan Yanan

An Improved Information Gain Feature Selection Algorithm for SVM Text Classifier .............................273
  Jiamin Xu and Hong Jiang

Modeling and Analysis the Evolution of Herding Behavior in Public Opinion Propagation .........................277
  Li Yong, Li Li, and Zou Kai

Research on Spreading Mechanism of Network Rumors Based on Potential Energy .........................................282
  Wang Li, Liu Fengming, Yang Rongrong, and Sun Wenxing

Data Deduplication Mechanism for Cloud Storage Systems .......................................................................286
  Xiaolong Xu and Qun Tu

Analysis of Energy Consumption of Deduplication in Storage Systems .....................................................295
  Yizhou Yan and Wenjun Wu
Session 7: Image, Monitoring, Control, and Performance

Optimized Gray-Scale Image Watermarking Algorithm Based on DWT-DCT-SVD and Chaotic Firefly Algorithm .................................................................310
Huailin Dong, Mingyuan He, and Ming Qiu

Concurrency Analysis and Implementation of SAR Imaging Algorithm Oriented to Hybrid Storage System .................................................................314
Jing Du, Fujiang Ao, Sai Sui, and Huabing Wang

Combining Visual Saliency and Pattern Masking for Image Steganography .................................320
Lihui Cao and Cheolkon Jung

Real-Time Depth-Image-Based Rendering on GPU ......................................................................324
Zengzeng Sun and Cheolkon Jung

Survey on Image Saliency Detection Methods ...........................................................................329
Ma Runxin, Yu Yang, and Yue Xiaomin

Performance Evaluations of Graph Spectra on Evolving Systems .................................................339
Bo Jiao, Yuan-Ping Nie, Jing Du, Ying Zhou, Cheng-Dong Huang, and Xun-Long Pang

Comparison Between Controllers of Polynomial Fuzzy Control System .........................................343
Xiaodong Zhang, Hugang Han, and Yuki Higaki

Video Minor Motion Magnification System for Telemedicine ............................................................350
Yi Zhang and Tao Yang

Performance-Conscious Reconfiguration Structure for Large-Scale Coarse-Grained Reconfigurable System ...........................................................................354
Bo Liu, Yu Gong, Rui-he Wang, and Yang Liu

Impacts of Road Grade on Fuel Consumption of Light Vehicles by Use of Google Earth DEM ........................................................................................................360
Yanni Wang, Xiaoping Du, Haitao Yu, Jian Huang, and Yonghao Li

RESTful Web Service Matching Based on WADL ..............................................................................364
Yang Xue, Chunhong Zhang, and Yang Ji

Session 8: Smart Sensor Networks

Wireless Sensors in Farmland Environmental Monitoring ..............................................................372
Juan Xu, Jianjun Zhang, Xuehui Zheng, Xing Wei, and Jianghong Han

An Algorithm to Generate Data Linkages of Linked Sensor Data ..................................................380
Lin-Na Cuan, Yi-Min Shi, Guan-Yu Li, Xue-Hua Wu, and Ning Liu
Design of Sense Amplifier in the High Speed SRAM ...............................................................384
Yong-Peng Tao and Wei-Ping Hu

A Novel Energy Efficient Coding-Aware Scheme in Wireless Sensor Networks ...............................388
Hanxu Zheng, Caihong Kai, Mengqi Yan, and Qinglin Zhao

An Improved Dynamic Z* Algorithm for Rapid Replanning of Energy-Efficient Paths ...............395
Nuwan Ganganath, Chi-Tsun Cheng, and Chi K. Tse

Doppler Shift and Height Detection of Obstacle Based on FMCW Radar Sensor ..........................399
Zhou Hongping, Liu Quanbo, Chen Dapeng, Chen Wenliang, and Shen Fei

An Energy-Efficient System of Counteraction Against Attacks in the Mobile Wireless Sensor Networks .................................................................403
Elena Basan and Oleg Makarevich

A Real-Time ASL Recognition System Using Leap Motion Sensors ..............................................411
Kai-Yin Fok, Nuwan Ganganath, Chi-Tsun Cheng, and Chi K. Tse

Research on the Architecture of Wildlife Observation and Communication System ..................415
Xiaohan Liu, Tao Yang, and Baoping Yan

Reconfigurable Antenna Based Blind Interference Alignment over Heterogenous Block Fading Channels .................................................................419
Yubo Li, Min Peng, and Qing Feng Zhou

A Generalized Robust Chinese Remainder Theorem of Dual-Band Integers for Phase Unwrapping ........................................................................423
Bin Yang and Xinyu Li

An Algorithm to Generate Data Linkages of Linked Sensor Data ..................................................430
Lin-Na Cuan, Yi-Min Shi, Guan-Yu Li, Xue-Hua Wu, and Ning Liu

Session 9: 5G and Wireless Communications

A Dynamic Allocation Algorithm for Physical Carrier Resource in BBU Pool of Virtualized Wireless Network ..................................................................................434
Ganqiang Lu, Caixia Liu, Lingshu Li, and Quan Yuan

Shaping Filter Design for Faster-than-Nyquist Signaling with Second Order Polynomial Function .........................................................................................................................442
Qimei Chen and Han Zhang

Joint Resource Allocation for Uplink Virtual MIMO Systems under Elastic MSE Constraint .........................................................................................................................446
Xiaofeng Lu, Shaojun Qiu, Wenna Li, Ya Gao, and Hailin Zhang

Precoding Schemes for the Gaussian Wire-Tap Channels .................................................................453
Jun Cheng

Waveform Design for Tracking Systems ..........................................................................................458
Xinxi Le
Channel Adjustment for Performance Enhancement in Wireless Networks ..............................................................463

Yuanyuan Wu, Yu Zhao, and Yunhuai Liu

A Signal Analysis Design Based on LabVIEW .........................................................................................................473

Xiangwen Zhai, Minglun Zhang, Xiaonan Bai, and Zhidan Zhang

An Off-Line Implementation of OFDM in a Visible Light Communication System ................................................477

Xiaonan Bai, Minglun Zhang, and Xiangwen Zhai

A Sleep Scheduling Mechanism Based on Power Law Distribution for Mobile Delay Tolerate Networks ......................................................................................................................................................481

Yankun Feng, Xiangyu Bai, Na Dang, and Shufang Wang

Session 10: SDN/NFV and Cognitive Networks

Performance of SDN Routing in Comparison with Legacy Routing Protocols .........................................................491

Hailong Zhang and Jinyao Yan

High Reliable Routing Protocol Based on the Cross-Layer Constraints of Channel State Association Information for MHWNs ........................................................495

Li Lou, Jian-Hua Fan, Xiao-Xie Xu, and Yong-Yang Hu

k -Maximally Disjoint Path Routing Algorithms for SDN .........................................................................................499

John Olorunfemi Abe, Haci Ali Mantar, and Aysegul Gencata Yayimli

Community Detection Analysis of Heterogeneous Network .....................................................................................509

Shuai Du, Kai Niu, Zhiqiang He, and Yuqian Qiao

QoS Performance Analysis for the Second User in the Overlay Cognitive Radio Networks ...............................................513

Junbo Hua and Ningning Jiang

Optimization Algorithm Based on SPSA in Multi-channel Multi-radio Wireless Monitoring Network ........................................................517

Sheng Ding, Na Xia, Peipei Wang, Shaojie Li, and Yuanxiao Ou

Wireless Campus Network Design and Optimization Based on OPNET ................................................................525

Juanjuan Wang, Xiangyu Bai, and Junli She

Queuing-Theoretical Multi-user Spectrum Sensing and Access in Multi-channel Cognitive Radio Networks ........................................................................................................................529

Long Zhang, Liusheng Huang, and Hongli Xu

A RCP-Based Congestion Control Protocol in Named Data Networking .................................................................538

Kai Lei, Chaojun Hou, Lihua Li, and Kuai Xu

An Inverse Problem in Wireless Mesh Network ........................................................................................................542

Mohammad S. Khan, Anup Kumar, and Bin Xie

MR-Verifier: Verifying Open Flow Network Properties Based on MapReduce .........................................................548

Yi Liu, Cheng Lei, and Hongqi Zhang

Author Index ............................................................................................................................................................556
