OPTICAL SYSTEMS
Session Chair: Jim Mayo, Tau Technologies

The Fundamental Role of Wide-Field Imaging in Space Situational Awareness ........................................10

The MetaTelescope, a System for the Detection of Objects in Low and Higher Earth Orbits ...............25
Michel Boer, French National Centre for Scientific Research (CNRS)

Early CAL/VAL Process for an Optical Tracking System by Korea .........................................................35
Jung Hyun Jo, Korea University of Science & Technology, Korea Astronomy & Space Science Institute

Developing Geostationary Satellite Imaging at the Navy Precision Optical Interferometer ....................40
Gerard van Belle, Lowell Observatory

SPIDER: Next Generation Chip Scale Imaging Sensor ..............................................................................52
Alan Duncan, Lockheed Martin

SPACE SITUATIONAL AWARENESS (SSA)
Session Chairs: Lt Col Elizabeth Campbell, SMC/SYAZ & Lt Col Larry Gunn, DARPA

Application of a COTS Resource Optimization Framework to the SSN Sensor Tasking Domain – Part I: Problem Definition ........................................................................................................................................58
Triet Tran, Braxton Technologies LLC

Dynamic Steering for Improved Sensor Autonomy and Catalogue Maintenance .......................................73
Tyler A. Hobson, University of Queensland, Defence Science and Technology Group

First Results of Coherent Uplink from a Phased Array of Widely Separated Antennas: Steps toward a Verifiable Real-Time Atmospheric Phase Fluctuation Correction for a High Resolution Radar System .........................84
Barry Geldzahler, NASA- HQ

Technique for GEO RSO Station-Keeping Characterization and Maneuver Detection ............................103
Jake Decoto, Orbital-ATK

Heimdall System for MSSS Sensor Tasking ...............................................................................................122
Alex Herz, Orbit Logic

Conceptual Design for Expert Centres Supporting Optical and Laser Observations in a Space Surveillance and Tracking System .................................................................................................133
Tim Flohrer, ESA/ESOC

A Fast Method for Embattling Optimization of Ground-Based Radar Surveillance Network ..................141
Hai Jiang, National Astronomical Observatories, Chinese Academy of Sciences

Operations Analysis of Australian-based Systems for Surveillance of Space ...........................................147
Mark Graham, Defence Science and Technology Group, Department of Defence

Integrated Space Asset Management Database and Modeling .............................................................157
Larry Gagliano, NASA/MSFC

Collaborative Work Environment for Operational Conjunction Assessment ...........................................169
Francois Laporte, CNES
Project UNITY: Cross Domain Visualization Collaboration ........................................................... 179
  Jason Moore, Air Force Research Laboratory

Space Fence Overview .................................................................................................................. 198
  Joseph Haimerl, Lockheed Martin

SPACE WEATHER
Session Chair: Randy Alliss, Northrop Grumman Corporation

Sub-Auroral Ion Drifts as a Source of Mid-Latitude Plasma Density Irregularities ..................... 209
  Vladimir Sotnikov, Air Force Research Laboratory

MAMBA All-sky Camera .............................................................................................................. 210
  Kevin Jim, Oceanit

Characterizing the Performance of Haleakala as a Ground Site for Laser Communications .......... 214
  Billy Felton, Northrop Grumman

Predicting Space Weather Effects on Close Approach Events .................................................. 229
  Lauri Newman, NASA

Research to Operations of Ionospheric Scintillation Detection and Forecasting ....................... 238
  James Jones, Northrop Grumman

ORBITAL DEBRIS
Session Chair: Tim Flohrer, European Space Agency

Statistical Track-Before-Detect Methods Applied to Faint Optical Observations of Resident Space Objects .... 248
  Kohei Fujimoto, Texas A&M University

Streak Detection Algorithm for Space Debris Detection on Optical Images ................................ 262
  Thomas Schildknecht, Astronomical Institute (AIUB), University of Bern

Deploying the NASA Meter Class Autonomous Telescope (MCAT) on Ascension Island ............... 263
  Susan Lederer, NASA JSC

GEO Collisional Risk Assessment Based on Analysis of NASA-WISE Data and Modeling .......... 273
  Capt Samantha Howard, AFRL Space Vehicles Directorate

Environment Characterisation by Using Innovative Debris Detector ......................................... 284
  Dr. Waldemar Bauer, German Aerospace Center (DLR)

Space Debris Attitude Simulation - IOTA (In-Orbit Tumbling Analysis) .................................... 291
  Ronny Kanzler, Hyperschall Technologie Göttingen GmbH, Germany

NON-RESOLVED OBJECT CHARACTERIZATION SESSION
Session Chairs: Doyle Hall, Boeing LTS and Matt Hejduk, Astrorum Consulting

Photometric Monitoring of Non-resolved Space Debris and Databases of Optical Light Curves .......... 304
  Thomas Schildknecht, Astronomical Institute (AIUB), University of Bern

IRTF SpeX Observations of Orbital Object .................................................................................. 305
  Brent Buckalew, Jacobs
   Anil Chaudhary, Applied Optimization Inc.

Active Polarimetry for Orbital Debris Identification ..........................................................383
   Michael Pasqual, Massachusetts Institute of Technology

Spatio-Temporal Scale Space Analysis of Photometric Signals with Tracking Error .................399
   Brien Flewelling, Air Force Research Laboratory/RVSVC

NIR Color vs Launch Date: A 20-year Analysis of Space Weathering Effects on the Boeing 376 Spacecraft ...422
   James Frith, University of Texas El Paso

Satellite Photometric Error Determination ...........................................................................432
   Tamara Payne, Applied Optimization Inc.

Automated Algorithm to Detect Changes in Geostationary Satellite’s Configuration and Cross-Tagging ..........448
   Phan Dao, Air Force Research Laboratory/RVB

ASTRODYNAMICS
   Session Chair: Moriba Jah, Air Force Research Laboratory

Space-to-Space Based Relative Motion Estimation Using Direct Relative Orbit Parameters ..............466
   Trevor Bennett, University of Colorado Boulder

Orbital Element Generation for an Optical and Laser Tracking Space Object Catalogue ..................479
   James Bennett, Space Environment Research Centre & EOS Space Systems

Track-to-Track Data Association using Mutual Information .........................................................489
   Islam Hussein, Applied Defense Solutions

Improving Space Object Catalog Maintenance through Advances in Solar Radiation Pressure Modeling ..........499
   Jay McMahon, University of Colorado Boulder

Towards Real-Time Maneuver Detection: Automatic State and Dynamics Estimation with the Adaptive Optimal Control Based Estimator .................................................................524
   Daniel Lubey, University of Colorado Boulder

Bridging the Gap between Academia and Operations for Orbital Debris Risk Mitigation ..................534
   Mark Vincent, Raytheon

Total Probability of Collision as a Metric for Finite Conjunction Assessment and Collision Risk Management ..........547
   Ryan Frigm, Omitron Inc.

Coupled Simulations, Ground-Based Experiments and Flight Experiments for Astrodynamics Research ........559
   Russell Boyce, University of New South Wales

ADAPTIVE OPTICS AND IMAGING
   Session Chair: Glenn Tyler, the Optical Sciences Company

Resolved Observations of Geosynchronous Satellites from the 6.5 m MMT ........................................571
   Michael Hart, University of Arizona

Italian Air Force Radar and Optical Sensor Experiments for the Detection of Space Objects in LEO Orbit .....577
   Giovanni Marco Del Genio, Italian Air Force
Incorporating LWIR Data into Multi-Frame Blind Deconvolution of Visible Imagery...................................587
  Michael Werth, Boeing

New Aperture Partitioning Element.............................................................................................................596
  Steven Griffin, Boeing

From Dye Laser Factory to Portable Semiconductor Laser: Four Generations of Sodium Guide Star Lasers for
Adaptive Optics in Astronomy and Space Situational Awareness ..............................................................597
  Celine d'Orgeville, Australian National University

Adaptive Optics for Satellite Imaging and Space Debris Ranging..............................................................614
  Francis Bennet, Research School of Astronomy and Astrophysics, Australian National University

A Comprehensive Comparison of COMBAT Data to Wave-Optics Simulations ......................................623
  Richard Holmes, Boeing LTS

Anisoplanatic Imaging Through Turbulence Using Principal Component Analysis ..................................632
  Roberto Baena-Gallé, Royal Academy of Sciences and Arts of Barcelona

Fundamental Constraints on Imaging Geosynchronous Satellites .............................................................645
  David Mozurkewich, Seabrook Engineering

Multiple-Baseline Detection of a Geostationary Satellite with the Navy Precision Optical Interferometer .656
  Henrique Schmitt, Naval Research Laboratory

POSTER PRESENTATIONS

Commercial Optics for Space Surveillance and Astronomy .................................................................662
  Mark Ackermann, Celestron

New Approach to Multiple Data Association Processing for Initial Orbit Determination using Optical Observations...674
  Dilmurat Azimov, Mechanical Engineering, University of Hawaii at Manoa

Comparison of BRDF-Predicted and Observed Light Curves of GEO Satellites.........................................695
  Angelica Ceniceros, University of Arizona

Architecture Design for the Space Situational Awareness System in the Preparedness Plan for Space Hazards of
Republic of Korea .........................................................................................................................................708
  Eun Jung Choi, Korea Astronomy and Space Science Institute

Adaptive Optics Testbed for the Visible High Resolution Imaging .........................................................713
  Young Soo Choi, Agency for Defence Development

Robust Wave-front Correction in a Small Scale Adaptive Optics System Using a Membrane Deformable Mirror ......718
  Young Soo Choi, Agency for Defence Development

Spectral Measurements of Geosynchronous Satellites during Glint Season .............................................727
  Francis Chun, U.S. Air Force Academy, Department of Physics

An Asteroid and its Moon Observed with LGS at the SOR........................................................................737
  Jack Drummond, Air Force Research Laboratory

Detecting GEO Debris via Cascading Numerical Evaluation for Lines in Image Sequence ......................744
  Koki Fujita, Kyushu University

Innovative Electrostatic Adhesion Technologies.........................................................................................751
  Larry Gagliano, NASA/MSFC
Small Orbital Stereo Tracking Camera Technology Development .............................................................759
Larry Gagliano, NASA/MSFC

Space Situational Awareness Data Processing Scalability Utilizing Google Cloud Services .....................763
Dave Greenly, SpaceNav

Efficient Photometry In-Frame Calibration (EPIC) Gaussian Corrections for Automated Background Normalization of Rate-Tracked Satellite Imagery .......................................................................................................................770
Jacob Griesbach, Applied Defense Solutions

10 Steps to Building an Architecture for Space Surveillance Projects .......................................................782
Eric Gyorko, Harris Corporation

Multi-sensor Observations of the SpinSat Satellite.......................................................................................................................791
Doyle Hall, Boeing – LTS

Changes of the Electrical and Optical Character of Polyimide Films Due to Exposure to High Energy GEO-like Electrons and the Chemistry that Drives it ..............................................................801
Ryan Hoffmann, Air Force Research Laboratory/RVB

Accurate Focus Correction for Large Telescope .......................................................................................................................809
Richard Holmes, Boeing LTS

Advantages of a Geographically Diverse Ground Based Architecture for SSA ..............................................817
Brendan Houlton, Analytical Graphics, Inc.

RSO Characterization from Photometric Data Using Machine Learning ....................................................818
Michael Howard, Charles River Analytics, Inc.

Treemap Visualizations for Space Situational Awareness .................................................................................828
John Ianni, Air Force Research Laboratory

The Joint Space Operations Center (JSpOC) Mission System (JMS) and the Advanced Research, Collaboration, and Application Development Environment (ARCADE) ...........................................................845
Kipp Johnson, Scitor Corporation

SSA Sensor Calibration Best Practices ......................................................................................................858
Thomas M. Johnson, Analytical Graphics Inc.

Multicolour Optical Photometry of Active Geostationary Satellites .............................................................869
Andrew Jolley, Royal Australian Air Force

Imaging of Stellar Surfaces with the Navy Precision Optical Interferometer ................................................888
Anders Jorgensen, New Mexico Institute of Mining and Technology, New Mexico Tech

An FPGA-based High Speed Parallel Signal Processing System for Adaptive Optics Testbed ................896
Hong Bong Kim, Hanwha Thales Co. Ltd.

Real-time Astrometry Using Phase Congruency .................................................................................................902
Andrew Lambert, UNSW Canberra

Reconstructing from Extended Imagery of Space Objects ..................................................................................907
Andrew Lambert, UNSW Canberra

Benefits of Applying Predictive Intelligence to the Space Situational Awareness (SSA) Mission ............911
Ben Lane, Northrop Grumman
