## TABLE OF CONTENTS

### VOLUME 1

(38a) Optimization Models and Algorithms for Water Supply Chain Network Design and Operations in Shale Gas Production .................................................................................................................. 1

Jiayo Gao, Fengqi You

(38b) Metrics Driven Systems Analysis for Water & Energy Sustainability .................................................................................................................................................................................. 2

Arunprakash T. Karunamathy, Jonathan Dubsky

(38c) An Industrial Ecology Approach for Managing Wastewater from Shale Gas Production .......................................................................................................................... 3

Sakineh Taravahidi, Radisson D. Yidic, Vikas Khamma

(38d) Integrated Optimization of Water Supply Systems Scheduling for Energy Efficient Operations ........................................................................................................................................ 4

Hanyu Shi, Fengqi You

(38e) Optimization of Complex Integrated Water and Membrane Network Systems .......................................................... 5

Musah Abass

(38f) An MINLP Model for the Water Management in Shale Gas Operations .......................................................................................................................... 13

Luis Fernando Lira-Barregán, José María Ponce-Ortega, Meadardo Serna-González, Mahmoud M. El-Halwagi

(60a) Overview of CAST Activities and Programming .......................................................................................................................... 14

Nick Sahinidis, Raymond A. Adomaitis

(60b) Systematic Computer-Aided Framework for Sustainable Chemical Product Design .................................................................................................................. 15

Stefano Cignitti, Lei Zhang, Sawitree Kalakul, Rajipal Gani

(60c) Multimetric Dynamic Programming – Recent Advances and Future Challenges ........................................................................................................................................ 16

Richard Oberdieck, Nikolaos A. Diangelakis, Efstratios N. Pistikopoulos

(60d) Mixed-Integer Model Predictive Control for Online Scheduling of HVAC Equipment in Commercial Buildings .................................................................................................................. 17

Zhaojia Lin, Abhay Athaley, Vladimiros Nikolakis, Marianti G. Ierapetritou

(60e) Dynamic Modeling of the Nitrogen Cycle in Biochar Amended Soils: A New Approach for Rapid Screening of Designer Biochars .................................................................................................................. 19

Kyriacos Zygourakis, Caroline A. Masiello, Hao Sun

(60f) Smart Grid: Opportunities for the Process Industries .......................................................................................................................... 21

Iro Harjunkoski, Lennart Merkert, Ernst Scholz, Xiaoming Feng

(91a) Novel Processes for the Production of Olefins and Aromatics from Methane Via Methanol: A Comprehensive Process Synthesis and Global Optimization Approach ........................................................................................................................................ 22

Alexander M. Niziolok, Onur Onel, Christodoulos A. Floudas

(91b) Process Design and Optimization of Chemicals’ Production from Biomass Feedstocks ........................................................................................................................................ 23

Zhaojia Lin, Abhay Athaley, Vladimiros Nikolakis, Marianti G. Ierapetritou

(91c) A Review on Life Cycle Assessments of Prioritized Renewable Chemicals and Their GHG Reduction Potential ........................................................................................................................................ 25

Mahdoolt Montazeri, George G. Zaimis, Vikas Khamma, Matthew J. Eckelman

(91d) Process Simulation Models Parameterizing Multi-Sector Technoeconomic Framework to Test Viability of Emerging Bioprocesses ........................................................................................................................................ 28

Sameek Sukamara

(91e) Biolubricant: Lignin in Choline/Amino Acid Ionic Liquids .................................................................................................................................................... 29

Lisen Mu, Jiahua Zhu

(156a) An Exposure Reconstruction MODEL for Environmental and Consumer Product Chemicals: Application on Bisphenol ........................................................................................................................................ 30

Anastasios Sarigiannis, Evangelos Handakas, Alberto Gotti, Spyros Karokitis

(156b) Synthesis of Networks of Reactors Featuring Multiple Residence Time Distribution ........................................................................................................................................ 32

Abdulrahman Alhassam, Vasiliis Manosotiouakis

(156c) Small-Scale Gtl Processes for Utilizing Stranded Gas: Model Identification, Process Synthesis, and Global Optimization ........................................................................................................................................ 33

Onur Onel, Alexander M. Nizioled, Holly Butcher, Benjamin Wilhite, Christodoulos A. Floudas

(156d) Transient Analysis of Gaseous Contamination Dispersion on Offshore Facilities ........................................................................................................................................ 34

Jiannin Lu, Andre Filippov, Fernando Marcineola, Victor Alcacer

(156e) Multi-Domain Modeling and Operation of a Steam Methane Reforming Furnace ........................................................................................................................................ 35

Liangfeng Luo, Andres Aguirre, Panagiotis D. Christofides

(156f) Integration of High-Fidelity CO2 Sorbent Models at the Process Scale Using Dynamic Discrepancy ........................................................................................................................................ 36

Kaijun Li, Priyadarshi Mahapatra, David Mebane

(156g) A Model-Based Approach for Predicting Gas Well Leaks from Cemnted Annulus and Identifying Well Construction Factors Responsible for Such Leaks ........................................................................................................................................ 37

Shohbat Mirza, Michael Nikolaou

(162a) Offset-Free Model Predictive Control with Explicit Performance Specification ........................................................................................................................................ 39

Matt Wallace, Prashant Bhaskar

(162b) Stiction Compensation through Economic Model Predictive Control ........................................................................................................................................ 40

Helen Durand, Panagiotis D. Christofides

(162c) Reformulating Nonrobust Nonlinear Model Predictive Control ........................................................................................................................................ 41

Devin Griffith

(180d) An Adjustable Robust Optimization Approach to Provision of Interruptible Load By Continuous Processes
Q. Zhang, Michael F. Morari, Ignacio E. Grossmann, Arul Sundaramoorthy, Jose M. Pinto
Donald J. Chmielewski

(180f) Energy Exchange in Autonomous Isolated Networks with Renewable Energy Sources Empowered by a
Multi-Agent Internet of Things (IoT) Architecture
Chrysosvaliantou Zgiou, Simira Papadopoulou, Spyros S. Voutetakis

(204a) Online Optimization for Grade Transitions in Polyethylene Solution Polymerization Process
Jun Shi, Intan Hamdan, Loren T. Biegler

(204b) Real-Time Estimation of Plasma Insulin Concentration in Patients with Type 1 Diabetes
Iman Hajizadeh, Kamuran Turksen, Sedahge Samadi, Jiangyuan Peng, Ali Cinar

(204c) Information Theory-Based Sequential Parameter Estimation of Bioreactor
Jung Hun Kim, Jong Min Lee

(204d) Moving Horizon Estimation Via Carleman Linearization and Stability Analysis
Nagar Hashemian, Antonios Armanou

(204e) Parameter Estimation and Nonlinear Model Predictive Control Using Meshless Modelling Framework
Chao Fu, Truls Gundersen

(204f) Stochastic Model Predictive Control with Bounded Inputs and Joint State Chance Constraints: Application
to a Continuous Acetone-Butanol-Ethanol Fermentation Process
Joel Paulson, Edward Buehler, Richard D. Braatz, Ali Mesbah

(204g) A New Approach to Solving Stochastic Optimal Control Problems
Pablo T. Rodriguez-Gonzalez, Vicente Rico-Ramirez, Urmila Das

(204h) Integrating Lyapunov-Based Offset-Free Model Predictive Control with Subspace Identification Methods
Nihar Sahay, Marianthi Ierapetritou

(229a) Computer Aided Molecular and Process Design Using Complex Process and Thermodynamic Models: A
Screening Based Approach
Smitha Gopinath, Amparo Galindo, George Jackson, Claire S. Adjiman

(229b) A Multi-Actor Multi-Objective Framework for the Design of Economically Optimal Processing Networks
Ana I. Torres, George Stephanopoulos

(229c) Incorporation of Inherent Safety and Environmental Aspects in Process Design and Supply Chain
Optimization
Chi Nguyen, Mahmoud M. El-Halwagi

(229d) Theoretical Analysis and Economic Evaluation of Draw Solution Assisted Reverse Osmosis Process
Keo Park, Do Yeon Kim, Dae Ryook Yang

(229e) New Insight for the Design of Networks with Heat Exchange,Compression and Expansion
Chao Fu, Truls Gundersen

(229f) Applications of Pinch Analysis and Mathematical Programming Methods for Synthesizing Non-Isothermal
Water Networks

(229g) Optimization of a Dividing Wall Batch and Semi-Batch Reactive Distillation Column for the Production of
Methyl Acetate: Potential for Energy Savings
Edna S. Lopez-Saucedo, Salvador Hernandez, Juan Gabriel Segovia, Ignacio E. Grossmann

(234a) A New Robust Scenario Approach to Supply Chain Optimization Under Uncertainty
Niaz Chowdhury, Xiang Li

(234b) Supply Chain Optimization Tools for the Strategic Planning of Biorefining Systems
Anna Pantei, Sara Giardini, Nitish Shah

(234c) Solution Approaches for Large-Scale Shale Gas Supply Chain Optimization Problems
Andris Joaquin Calderon Vergara, Omar J. Guerra, Lazaros G. Papageorgiou, Carl Laird, Gintaras Reklaitis

(234d) Exact Optimization Frameworks for Time-Consistent Distribution
Anirudh Subramanyam, Chrysanthos E. Gounaris

(234e) Multi-Criteria Decision Making Supplier Selection and Auction Based Procurement in Supply Chain
Management

(234f) Centralized Versus Distributed Manufacturing: A Continuous Location-Allocation Problem
Cristiana L. Lara, Ignacio E. Grossmann

(234g) Non-Cooperative Games for the Optimization of Multi-Enterprise Chemical Supply Chains under
Uncertainty
Krishna Hsia, José Miguel Latane, Luis Parigian, Antonio Espinola

(234h) Supply Chain Network Design Under Outsourced Transportation and Warehousing
Peter Brunnwalt, Ignacio E. Grossmann, John M. Wassick, Anshul Agarwal, Matt Basset

(242a) Numerical Simulation of Delayed Coking Reactor
Fabian A. Diaz

(242b) Sample Imbalance and Its Role in Understanding Drug Network Characteristics
Jason E. Shoemaker

(242c) Optimization of Primary Separation Rate of Magnesium Electrolysis Cell Based on Thermo-Electro-
Magneto-Hydrodynamics Coupling Model
Cheng-Lin Liu, Ze Sun, Mengjie Luo, Gui-Min Lu, Xing-Fu Song, Jian-Guo Yu
(244i) Modeling and Control of Reversible Addition-Fragmentation Chaintransfer (RAFT) Polymerization Reaction in a Batch Reactor ...................................................... 242
Arturo Ortiz-Jarabo

(244s) Fault Detection and Diagnosis in Batch and Fed-Batch Bioreactor System Using PCA, PCR, PLS with Glr Method ................................................................. 243
Chiranjivi Botre, Maria Stepania Anguita Gomez, Majdi Mansouri, Mohamed Nounou, Hazem Nounou, M. Nazmul Karim

(244j) Steam Load Shedding System Design Using Dynamic Simulation ........................................ 244
Yugesh Karle, Qiang Xu

(244e) Optimal Pump Network Reconfiguration Scheduling Considering Time-of-Use Electricity Prices ................................................................. 245
David Yang Shu, Nael H. El Farra, Amit Palazoglu

(244r) Modeling, Optimisation and Control of Solar Absorption Air-Conditioning System .................. 246
Simon Ochene

(244m) A Data-Knowledge Hybrid Framework for Process Monitoring and Fault Detection with the Combined Use of Big Data .................................................. 247
Sangchan Ahn, Dongil Shin

(244k) Condition-Based Cleaning of Refinery HEAT Exchangers Undergoing Crude Oil Fouling ............. 248
Emilio Diaz-Rejasano, Laura Lanchas, Francesco Coletti, Sandro Macchietto

(244g) Dynamic Manipulation of a SOFC/GT Hybrid Power Generation System Subject to Low Carbon Emissions ................................................................. 249
Wei Wu

(244p) Process Design and Optimization for Eterification of Glycerol with Isobutene ....................................................... 250
Jingjun Liu, Prodromos Daoutidis, Bolan Yang

(244s) Deriving Value from Integrating Operations Control and Optimization into Engineering Design .......... 251
Livia Wied

(244d) Use of Exergy in Energy-Efficient Process Design Methodology for Sub-Ambient Processes ............ 252
Danahe Marmolejo-Correa, Truls Gundersen

(244q) How Simulation Based Product Design in High-Pressure Polymerization Technology Leads Back to the Roots of Fundamental Science ........................................ 253
Markus Busch

(245i) Impact of Thermo-Physical Data on the Modelling of High Pressure Polymerizations .................. 254
Kristina Zentel, Markus Busch

(245a) Production of Bio-Butanol from Wheat Straw: A Proposal for Sustainable Design .................. 256
Dorothee Luise Kurz, Randi Neerup, Anders Lodberg, Anjan Kumar Tula

(245f) Sustainable Design for Production of Dimethyl Carbonate from Ethylenoxide, CO2 and Methanol ................................................................. 257
Erik Hastrup, Rishiha Chatterjee, Nipun Garg

(245c) Achieving a More Sustainable Design for the Production of Di-Methyl Carbonate Via CO2 Utilization ................................................................. 259
Spardha Jhum, Dane Harley, Pawel Sobczak, Amata Anantpinijwatana

(245l) Dynamic Simulation of a Cryogenic Air Separation Unit .................................................. 260
Tong Li

(245k) Modeling, Simulation and Optimization of Crude Distillation Unit ........................................ 261
Subhajit Majumder, Amanpreet Singh

(245b) Sustainable Design for Production of Styrene from Benzene and Ethylene .......................... 262
Matias Falk Bjerggaard, Jonas Richard Foelsby, Michael Roland Larsen

(245e) Achieving a More Sustainable Process Design for the Production of Methanol ......................... 264
Cristina Calveta Plaza, Maria Gonzalez Garcia

(245a) A Geometric Method to Calculate the Minimum Reflux of Complex Columns Using Enthalpy-Composition Diagram .................................................. 266
Angel Castro, Jose D. Olgin, Arturo Ortiz, Fernando Perez

(245o) Olefin Furnace System Scheduling with the Consideration of Relay Cracking of Recycled Ethane/Propane ................................................................. 267
Min Chen, Honglin Qu, Qiang Xu

(245g) Molecular Design of Reactants and Products - A Multi-Objective Approach ................................. 268
Vikrant Dev, Nishanth G. Chennamangattuvalappil, Mario Richard Eden

(245u) A Semi-Parametric Independent Component Analysis Method for Multivariate Process Monitoring ................................................................. 269
Ankur Chhabra, Prashant K. Agarwal

(245s) Design and Development of a High Temperature PEM Fuel Cell System for Charging of Li-Ion Battery Stacks ................................................................. 270
Chryssovalantou Ziogou, Damian Giaouris, Simira Papadopoulos, Spyros S. Voutetakis

(245f) Sustainable Production of Butanol – Evaluation of a Bio-Based Process ................................................ 271
Ana-Sofia Sanchez-Arcilla, Lorena Blanco, Jonas Biogaard, Anjan K Tula

(245c) Characterization of Microfluidic CO2 Absorption in Water By Computational Fluid Dynamics .......................... 272
Changwei Xiao, Harigaonsh Bhooma

(245a) Scheduling Optimization for Regeneration of Ion Exchange Resin in a Demineralized Water Treatment Facility ................................................................. 270
Brenno C. Menezes, Jeffrey D. Kelly, Marcel Joly

(246b) Scheduling and Optimization for Industrial Cogeneration Plants ........................................ 282
Rudolf Bindlish, Heidi Holmes

(246n) Maintaining Higher Efficiency of LPG Butane Boil-Off Gas Re-Liquefaction in LPG Butane Storage Tank Using Unsteady State Process Simulation .................................................. 284
Ronggo Ahmad Wikanswasto, Yazid Bindar, Hary Devianto

(246r) Optimal Design of Process Systems Under Uncertainty .................................................. 295
Guennadi Ostrovsky, Nadir Ziyadinnov, Lapteva Lapteva
VOLUME 2

(399d) The SEM Study and Molecular Dynamic Simulations of Nanosilica Grafted By Copolymer
Shanshan Dai ................................................................................................................................. 479
(399e) Plantwide Model-Based Optimization of a Large Scale Second Generation Biorefinery
Remus M. Prunescu, Mogens Blanke, Jon G. Jakobsen, Gürkan Sin .............................................. 482
(399f) Forward-Backward Contractor in Verified Simulation Using Interval Analysis for Dynamic Optimisation
Carlos Perez Galvan, I. David Bogle ............................................................................................... 484
(408a) Sensitivity Analysis of Molecular Design Problem for the Development of Novel Working Fluids for Power Cycles .............................................................................................................. 485
(408b) A Framework for the Preliminary Screening of Mixtures As Post-Combustion CO2 Capture Solvent Candidates
Theodoros Zarogiannis, Athanasios I. Papadopoulos, Panos Seferlis .............................................. 486
(408c) Computer-Aided Molecular Design of Water Compatible Dentin Adhesive System
Farhana Abedin, Qiang Ye, Paulette Spencer, Kyle Carmarda .......................................................... 487

(408e) Ontology Engineering Approach to Support Process Model Integration
Linsey Koo, Frans Jo Ceceljka, Nikolaos Trohanas ........................................................................ 499
(408f) Constructing Ontologies for Controlled Plants
A. Pretziger, Arne Tobias Elve ........................................................................................................... 501
(427a) Optimal Operation of an Austenitization Furnace
Vincent R. Heng, Michael Baldea .................................................................................................... 502
(427b) Run-to-run Control of PECVD of Thin Film Solar Cells
Marquis Crose, Joseph Sangil Kwon, Panagiotis D. Christofides ................................................... 503
(427c) Nonlinear Model Predictive Control of a Bubbling Fluidized Bed Adsorber for Post-Combustion Carbon Capture
............................................................................................................................................................ 504
(427d) Simultaneous Multi-Parametric Hybrid Model Predictive Control and Estimation with Application to the Intravenous Anaesthesia
Ioana Nascu, Richard Oberdieck, Efstratios N. Pistikopoulos ............................................................. 505
(427e) Model-Based Optimal Feedback Control of Colloidal Self-Assembly
Xun Tang, Bradley Rupp, Yuguang Yang, Michael A. Bevan, Marilyn A. Grover ............................... 508
(427f) Optimal Control of a Fed-Batch Bioreactor for Maximized Carotenoids Productivity
Jonathan P. Butterly, Maria Carolina Ordonez Franco, Tejaswi Jaladi, M. Nazmul Karim ............ 509
(427g) Glucose Control in the Intensive Care Unit: Controller Design and Alarm Layer Performance Evaluation in silico
Timothy Kuh, Gilles Clermont, Robert S. Parker ................................................................................ 510
(427h) Nonlinear Model Predictive Control of Managed Pressure Drilling Based on Hammerstein-Wiener Piecewise Linear Models
Junho Park, Seyed Mustafa Safdarnejad, Reza Asgharzadeh Shishavan, John D. Hedengren, Reza Rastegar, Adrian Smell .......................... 514
(449a) Closing the Gap Between Multiparametric Disaggregation and Piecewise McCormick Relaxations for Miqps
Pedro M. Castro ................................................................................................................................... 517
(449b) A New Portfolio of Relaxations for Global Optimization of NLPs and Minlps
Nick Sahinidis, Mustafa Kilinc ............................................................................................................ 525
(449c) Convex Envelopes of Product-Separable Edge-Concave Functions for Global Optimization
Yannis A. Guzman, Christodoulos A. Floudas ..................................................................................... 526
(449d) McCormick Relaxations: Extension to Multivariate Outer Function and Analysis of Convergence Rates
Jaromil Najman, Alexander Mitsos ...................................................................................................... 527
(449e) Convergence-Order Analysis of Branch-and-Bound Algorithms for Constrained Problems
Rohit Kannan, Paul I. Barton ............................................................................................................... 528
(449f) Enhancing the Performance of the Abb Algorithm through the Use of Interval and Convexity Tests
Nikolaos Kazazakis, Claire S. Adjiman ............................................................................................. 529
(449g) Modeling Abstractions and Frameworks for Optimization Problems with Differential Equations in Pyomo
Bethany Nicholson, Victor M. Zavala, John Siirola, Jean-Paul Watson, Lorenz T. Biegler ........ 530
(453a) Thin-Film Deposition Process Dynamics on Manifolds and Graphs
Raymond A. Adomaitis ....................................................................................................................... 531
(453b) Distributed Extremum-Seeking Control over Networks of Dynamically Coupled Unstable Dynamic Agents
Martin Guay ........................................................................................................................................... 533
(453c) Integrated Platform for System Design and Operation Based on Optimization
Rui Huang ............................................................................................................................................... 534
(453d) On Multiscale, Multidomain Modeling and Parallel Computation: Application to Crystal Shape Prediction in Crystalization
Joseph Sangil Kwon, G. Orkoulas, Panagiotis D. Christofides ...................................................... 549
(453e) Recent Advances in Uncertainty Analysis and Control in Multiscale Process Systems with an Application to Thin Film Deposition
Luis A. Ricardo Sanchez ..................................................................................................................... 550
(454a) Improved Performance Via the Inverted Classroom ................................................................................................................................. 552

(454b) A Collection of Virtual Experiments with Tracking of Student Interaction Data ................................................................. 553

Anthony Edward Butterfield, Kyle Branch

(454c) The Energy Sustainability Remote Laboratory (ESRL) .................................................................................................................... 554

Kerry M. Dooley, F. Carl Knopf, Robert Boehm, Jaren Lee, Franc S. Ehrenhauser

(454d) Use of Interactive Online Videos to Enhance Student Understanding of Thermodynamic Efficiency ........................................ 555

Fazan Zabair, Cynthia Brunce, Paul Lahinis

(454e) Scenario + Moodle = Self-Training Module for a Flipped Classroom in Distance Lifelong Learning or in Traditional Teaching ................................................................. 556

Marie Debaucq

(454f) Progress on the SMART-CN Education Modules for Engineering Curriculum ............................................................. 557

Alexandra R. Carveen, Yinlan Huang, Thomas F. Edgar, Mario Richard Eden, Clif Davidson, Mahmoud M. El-Halwagi

(463a) Multi-Scale Optimization Methods for Oxycombustion Power System Design .............................................................. 558

John F. Eason, Alexander W. Dowling, Jinliang Ma, David C. Miller, Lorenz T. Biegler

(463b) Wet Vs. Dry Cooling for the Operation of Concentrated Solar Plants ........................................................................ 559

Mariano Martin, Lidia Martin

(463c) Stochastic Scheduling for Microgrid Power Systems with Constrained External Power Exchange ............................................. 560

Michael Zachar, Prodromos Daoutidis

(463d) Optimization of Chemical-Looping Combustion Fixed-Bed Reactors in Natural Gas-Fired Combined Cycle Power Plants ............................................................................................................... 561

Lu Han, Chen Chen, Zhiquan Zhou, George M. Bollas

(463e) Integrated Process Design for Efficient Solar Thermal Hydrogen and Power Production ............................................................ 562

Enver Gençer, Mohit Tawarmalani, Rakesh Agrawal

Paschalis Mavron, Athanasios I. Papadopoulos, Panos Seferlis, Patrick Linke, Spyros S. Voutetakis
