Papers

012001

An exact formulation of $k$-distribution methods in non-uniform gaseous media and its approximate treatment within the Multi-Spectral framework Frédéric ANDRE, Longfeng HOU and Vladimir P. SOLOVJOV pg. 1

012002

Specular reflective boundary conditions for Discrete Ordinate Methods in Periodic or Symmetric Geometries Jian Cai and Michael F. Modest pg. 22

012003

Methodology for optical characterization of multi-scale morphologically complex heterogeneous media - Application to snow with soot impurities X Dai and S Haussener pg. 29

012004
Determination of space-dependent radiative properties in diffuse optical tomography using a wavelet multi-scale method F. Dubot, Y. Favennec, B. Rousseau and D. R. Rousse pag. 32

kspectrum: an open-source code for high-resolution molecular absorption spectra production V. Eymet, C. Coustet and B. Piaud pag. 35

Some speed-up strategies for solving inverse radiative transfer problems Y Favennec, D Le Hardy, F Dubot, B Rousseau and D R Rousse pag. 45

Radiative, conductive and convective heat-transfers in a single Monte Carlo algorithm Richard Fournier, Stéphane Blanco, Vincent Eymet, Mouna El Hafi and Christophe Spiesser pag. 48

Lab-scale study of radiative fluxes received from a fire front J Gérardin, A Marchand, N Trévisan, A Collin, Z Acem and P Boulet pag. 51

Towards the development of simple methods for determining normal absorptances of open-cell foams based on opaque materials Simon Guévelou, Benoit Rousseau, Gilberto Domingues and Jérôme Vicente pag. 54

Radiative characterization of ceramic foams with microporosity S Haussener and J. Randrianalisoa pag. 57

Iterative and FEM methods to solve the 2-D Radiative Transfer Equation with specular reflexion David Le Hardy, Yann Favennec and Benoît Rousseau pag. 60

Numerical modelling of transient heat and moisture transport in protective clothing P Łapka, P Furmański and T S Wisniewski pag. 63
Continuum radiative heat transfer modeling in multi-component anisotropic media in the limit of geometrical optics W. Lipiński, S. Haussener and J. Petrasch  pg. 77

Radiative modelling by the zonal method and WSGG model in inhomogeneous axisymmetric cylindrical enclosure Rachid Méchi, Habib Farhat and Rachid Said  pg. 81

An assessment of some non-gray global radiation models in enclosures J Meulemans  pg. 84

Study of a V-shape flame based on IR spectroscopy and IR imaging J. Pouplin, A. Collin, Z. Acem, G. Parent, P. Boulet, P. Vena, C. Galizzi, M. Kühni, F. André and D. Escudié  pg. 97

Infrared signature modelling of a rocket jet plume - comparison with flight measurements V Rialland, A Guy, D Gueyffier, P Perez, A Roblin and T Smithson  pg. 107

Experimental validation and modelling of a photobioreactor operating with diluted and controlled light flux V ROCHATTE, J DAUCHET and J-F CORNET  pg. 119

The Generalized SLW Model Vladimir P Solovjov, Frédéric Andre, Denis Lemonnier and Brent W Webb  pg. 122

Transition from the incoherent to the coherent regime for propagative-wave based thermal radiation Y Tsurimaki, P-O Chapuis, J Okajima, A Komiya, S Maruyama and R Vaillon  pg. 158
Meshless method for solving coupled radiative and conductive heat transfer in refractive index medium Cheng-An Wang, Hamou Sadat and Jian-Yu Tan  pg. 161
