Acknowledgements ........................................................................................................................... lvix

3PGCIC 2015

Session 1: Cloud and Grid Computing Systems

Towards Virtual Machine Migration in Fog Computing ................................................................. 1
   Luiz Fernando Bittencourt, Márcio Moraes Lopes, Ioan Petri, and Omer F. Rana

A MapReduce Approach for Processing Student Data Activity in a Peer-to-Peer Networked Setting ......................................................................................................................... 9
   Jorge Miguel, Santi Caballé, and Fatos Xhafa

A Variable Payout Information Security Financial Instrument and Trading Mechanism to Address Information Security Risk .......................................................................................... 17
   Pankaj Pandey and Steven De Haes

Live Data Replication Approach from Relational Tables to Schema-Free Collections Using Stream Processing Framework ........................................................................................................ 26
   Kun Ma and Bo Yang

Design Patterns in Cloud Computing ............................................................................................. 32
   Viliam Malcher

A Public Cloud Storage Auditing Scheme with Lightweight Authenticator Generation ................................................................................................................................. 36
   Wenting Shen, Jia Yu, Rong Hao, and Xu an Wang
Session 2: P2P and eLearning Systems

Virtual Machine Allocation in P2P-cloud Live Video Streaming .......................................................... 40
  Mehdi Seydali Seyfabad and Behzad Akbari

Network Traffic Load Balancing in Hierarchical Peer-to-Peer Systems ............................................. 46
  Gianluca Moro, Tommaso Pirini, and Claudio Sartori

Combining eLearning and P2P File-Sharing Technologies ................................................................. 54
  Rajendra G. Singh and Margaret A. Bernard

Towards Adaptive Peer Assessment for MOOCs ................................................................................... 64
  Nicola Capuano and Santi Caballé

Towards a Notification System for Mobile Devices to Support Collaborative Learning ......................... 70
  Santi Caballé and Fatos Xhafa

Towards Efficient and Effective Distributed Discovery of SWs in P2P Overlay Networks .................... 77
  Adel Boukhadra, Karima Benatchba, and Amar Balla

Session 3: Big Data, Parallel Algorithms and Applications

A Parallel Algorithm for the Prediction of Protein Binding Sites ......................................................... 85
  Maria Mirto and Giovanni Aloisio

A Parallel Algorithm with the Search Space Partition for the Pickup and Delivery with Time Windows .......... 92
  Jakub Nalepa and Miroslaw Blocho

Development of the Big Data Management System on National Virtual Power Plant ................................ 100
  Mijeom Kim, Jungin Choi, and Jaeweon Yoon

Text Mining Terms and Condition to Provide a Confidence Factor for the Use of Cloud Services ........... 108
  Mak Sharma, Philip Davies, David Newell, Philip Moore, and Chander Sidhu

Uploading Deferrable Big Data to the Cloud by Improved Dynamic Self-Adaption Algorithm ............... 116
  Baojiang Cui, Peilin Shi, Jun Yang, and Yongle Hao

Two-Tier Model for Supporting Network Functions Virtualization with FoCES .............................. 121
  Ma Shicong, Wang Baosheng, Gao Xianming, and Zhang Xiaozhe
Session 4: Mobile Computing and Social Networking

Towards Reliable Mobile Cloud Computing ................................................................. 127
   Khaled O. Darwish, Islam El Madahh, Hoda K. Mohamed, and Hadia El Hennawy

A Performance Prediction Model for Google App Engine ............................................ 134
   Sachi Nishida and Yoshiyuki Shinkawa

P2P-based Mobile Social Networks ........................................................................... 141
   Sung Woo Cho

Research and Implementation on Visual Analysis of Geological Volume ................. 146
   Kunliang Liu, Dakun Zhang, Xu An Wang, Guozhi Song, and Shuxia Ren

Research on War Strategy Games on Mobile Phone Based on Cocos2d-JS ............. 151
   Guozhi Song, Shuxia Ren, Dakun Zhang, Kunliang Liu, Yumeng Sun,
   and Xu An Wang

Trade-Off between QoE and Operational Cost in Edge Resource Supported Video Streaming ................................................................. 156
   Valentin Burger, George Darzanos, Ioanna Papafili, and Michael Seufert

Session 5: Scheduling and Resource Management in Cloud and Grid Computing

A Virtual Market for Energy Negotiation and Brokering ........................................... 162
   Alba Amato, Beniamino Di Martino, Marco Scialdone, and Salvatore Venticinque

Experimental Evaluation of Memory Optimizations on an Embedded GPU Platform ........................................................................................................... 169
   Innocenzo Mungiello

Improving Rank of a Website in Search Results - An Experimental Approach .......... 175
   Michal Gregus and Jakub Zilincan

Practical Implementation of Private Cloud Based on Open Source
ownCloud for Small Teams - Case Study .................................................................... 183
   Michal Gregus and Vincent Karovic

Enhanced Reliability Scheduling Method for the Data in Register File ...................... 188
   Qingyu Chen, Longsheng Wu, Li Li, Xuhan Ma, and Xu An Wang

Software Data Plane and Flow Switching Plane Separation in Next-Generation Router Architecture ......................................................................................... 194
   Gao Xianming, Wang Baosheng, Zhang Xiaozhe, and Wang Xu'an
Session 6: High Performance and Scalable Computing

Performance Evaluation of a MapReduce Hadoop-Based Implementation for Processing Large Virtual Campus Log Files .................................................................200

Fatos Xhafa, Daniel Garcia, Daniel Ramirez, and Santi Caballé

A Hierarchical Model for the Analysis of Efficiency and Speed-Up of Multi-core Cluster-Computers ........................................................................................................207

Heinz Kredel, Hans Günther Kruse, and Sabine Richling

A New Parallel Symmetric Tridiagonal Eigensolver Based on Bisection and Inverse Iteration Algorithms for Shared-Memory Multi-core Processors ..................................216

Hiroyuki Ishigami, Kinji Kimura, and Yoshimasa Nakamura

Managing Control the Water Treatment Using the Electro-Flotation Technology That is Based on the Pervasive Computing with the Internet Connection ...........................................................................................................................................224

Anna Antonyová and Peter Antony

Efficient Numerical Simulation for the Quasilinear Elliptic Problems .................................................................................................................................231

Qingli Zhao, Jin Li, Juxin Chen, and Xu An Wang

Parallel Query on the In-Memory Database in a CUDA Platform .................................................................................................................................236

Yin-Fu Huang and Wei-Cheng Chen

Session 7: Distributed Computing

Analysis of Computational Models and Application Characteristics Suitable for Reconfigurable FPGAs ..................................................................................................................244

Darshika G. Perera and Kin Fun Li

UAV-based Aerial Monitoring: A Performance Evaluation of a Self-Organising Flocking Algorithm ........................................................................................................248

Massimiliano De Benedetti, Fabio D’Urso, Fabrizio Messina, Giuseppe Pappalardo, and Corrado Santoro

Implementation of an FFT Hardware Accelerator for Security Applications .................................................................................................................................256

Domenico Argenziano

Anonymous Communication in the Browser via Onion-Routing .................................................................................................................................260

Florian Burgstaller, Andreas Derler, Stefan Kern, Gabriel Schanner, and Andreas Reiter

Profile-Based Viable Service Level Agreement (SLA) Violation Prediction Model in the Cloud ........................................................................................................268

Walayat Hussain, Farookh Khadeer Hussain, Omar Hussain, and Elizabeth Chang

Face Detection Based on Multi-parts and Multi-features .................................................................................................................................273

Yang Hua-chun
Session 8: Next Generation Systems for Mobile and Cloud Computing (Special Track)

Basic Internet Foundation and Cloud Computing .................................................................278
George Suciu, Cristina Butca, Victor Suciu, Alin Geaba, Alexandru Stancu,
and Stefan Arseni

Filters for Wi-Fi Generated Crowd Movement Data ............................................................285
Cristian Chilipirea, Andreea-Cristina Petre, Ciprian Dobre, and Maarten van Steen

SPIDER: A Bio-inspired Structured Peer-to-Peer Overlay for Data Dissemination ......................291
Bogdan Mocanu, Florin Pop, Alexandra Mihaita Mocanu, Ciprian Dobre,
and Valentin Cristea

Real-Time Alert Service for Cyber-Infrastructure Environments ..............................................296
Ionut-Gabriel Raducu, Valentina-Camelia Bojan, Florin Pop, Mariana Mocanu,
and Valentin Cristea

Analysis of Security Approaches for Vehicular Ad-Hoc Networks .......................................304
Alexandra Mihaita, Ciprian Dobre, Bogdan Mocanu, Florin Pop,
and Valentin Cristea

Proximity Graphs for Crowd Movement Sensors ........................................................................310
Cristian Chilipirea, Andreea-Cristina Petre, Ciprian Dobre, and Maarten van Steen

Session 9: High Performance Algorithms and Applications

Accelerating Physical Simulations from a Multicomponent Lattice Boltzmann Method on a Single-Node Multi-GPU Architecture .................................................................315
Julien Duchateau, François Rousselle, Nicolas Maquignon, Gilles Roussel,
and Christophe Renaud

A Study of Memory Consumption and Execution Performance of the cuFFT Library ................323
Jose Luis Jodra, Ibai Gurrutxaga, and Javier Muguerza

Efficient Lava Flows Simulations with OpenCL: A Preliminary Application for Civil Defence Purposes ................................................................................................................328
Maurizio Macri, Alessio De Rango, Davide Spataro, Donato D'Ambrosio,
and William Spataro

Performance Increase by Software Decomposition with Characteristics of Combinational Logic .................................................................................................................................336
Nils Potthoff, Carsten Gremzow, Christoph Brandau, and Dietmar Tutsch

A4SDN - Adaptive Alienated Ant Algorithm for Software-Defined Networking ........................344
Antonella Di Stefano, Giovanni Cammarata, Giovanni Morana, and Daniele Zito
Format-Independent Protection of DNA Microarray Images ................................................................. 351
   Raffaele Pizzolante, Arcangelo Castiglione, Bruno Carpentieri,
   Alfredo De Santis, Francesco Palmieri, and Aniello Castiglione

Session 10: BioInspired Computing and eHealth Applications

Learning from Annotated Video: An Initial Study Based on Oyama Karate Tournament Recordings ................................................................. 358
   Tomasz Hachaj, Marek R. Ogiela, and Katarzyna Koptyra

Usability of the Fuzzy Vault Scheme Applied to Predetermined Palm-Based Gestures as a Secure Behavioral Lock ................................................................. 363
   Marcin Piekarczyk and Marek R. Ogiela

Bio-inspired Algorithms in Data Management Processes ................................................................. 368
   Lidia Ogiela and Marek R. Ogiela

Machine Cognition and the Integration of Emotional Response in the Monitoring of Mental Disorders ................................................................. 372
   Philip Moore, Hai Van Pham, Bin Hu, Hong Liu, and Tarik Qaseem

Statistical Challenges for Quality Assessment of Smart Medical Devices ................................................................. 380
   Jan Sliwa

Interpretation of New ECG Signal Shapes for Diagnostics of Cardio-Vascular System ................................................................. 386
   Jiri Bila and Martina Mironovova

Multiport Single Mode Fiber Coupler Technique for Mechanical Microactuator to Damped Blood Flow ................................................................. 392
   Toto Saktioto, Dedi Irawan, Sofia Anita, and Jalil Ali

Session 11: Security and Authentication Algorithms

Fast and Secure Elliptic Curve Scalar Multiplication Algorithm Based on a Kind of Deformed Fibonacci-Type Series ................................................................. 398
   Shuanggen Liu, Guanglu Qi, and Xu An Wang

Analyze Network Protocol's Hidden Behavior ..................................................................................... 403
   Yanjing Hu, Liaojun Pang, Qingqi Pei, and Xu An Wang

Improvement of GGH Multilinear Map ..................................................................................... 407
   Chunsheng Gu, Zhimin Yu, Zhengjun Jing, Peizhong Shi, and Jin Qian

Full Secure Identity-Based Encryption Scheme over Lattices in the Standard Model ..................................................................................... 412
   Wang Jizhong and Wang Chunxiao

Study on Security Protocol Analysis and Design Technology for RFID System ......................... 416
   Pengpeng Yang, Baojiang Cui, Ziyue Wang, Xiaobing Liang, and Yilun Fu
Performance Analysis of an Improved Signal Detection Based on SDQR Decomposition Algorithm .................................................................420  
Xiaoyan Deng, Xiaohui Song, and Yunlong Ge

Session 12: Data Storage and Software Security
Another Look at Ciphertext Updating Algorithms for Cloud Storage ..........................................................424  
Xu An Wang, Jianfeng Ma, and Fatos Xhafa
Dynamic Binary Instrumentation Based Defense Solution against Virtual Function Table Hijacking Attacks at C++ Binary Programs ..........................................................430  
Yong Wang, Ming Li, Hailin Yan, Zhenyan Liu, Jingfeng Xue, and Changzhen Hu
Efficient Cryptology-Specific Instructions Generation with Algebra Primitives ........................................435  
Lei Liu, Guijie Han, Zixin Zhou, and Sikun Li
Quantum Secure Direct Communication Protocol Based on Cluster Entangled State ..........................................................440  
Huang Hong-Mei
Outsourcing Decryption of Attribute Based Encryption with Energy Efficiency ................................444  
Xu An Wang, Jianfeng Ma, and Fatos Xhafa
Fully Secure Hierarchical Inner Product Encryption for Privacy Preserving Keyword Searching in Cloud ..........................................................449  
Leyou Zhang, Zhuanning Wang, Yi Mu, and Yupu Hu

Session 13: Data Encryption and Privacy
Joint DWT and Integral Imaging for a Three-Dimensional Watermarking System ..........................................................454  
Liu Yiqun, Zhang Jianqi, Luo Peng, and Wang Xiaorui
Method for Eliminating the Black Zone of Integral Imaging ..........................................................458  
Zhang Jianlei, Liu Yiqun, and Wang Xiaorui
An Efficient VoIP Steganography Based on Random Binary Matrix ..........................................................462  
Jie Qin, Hui Tian, Yongfeng Huang, Jin Liu, Yonghong Chen, Tian Wang, Yiqiao Cai, and Xu An Wang
Exposing Blurred Image Forgeries through Blind Image Restoration ..........................................................466  
Feng Zeng, Wei Wang, Min Tang, and Zhanghua Cao
Identity-Based One Round Key Agreement Protocol without Bilinear Pairings ................................470  
Wenhao Liu, Shengbao Wang, Xiao Tan, Qi Xie, and Qizhen Wang
Efficient Numerical Simulation for the Nonlinear Laplacian Problem ..........................................................474  
Qingli Zhao, Shengxiang Xia, and Zongcheng Li
BIDS 2015 Workshop

Session 1: Decision Support and Services
Related-Item Display Support Based on Customer Queries in a Store ..................................................478
Minami Suzuki, Shu Li, Toshiya Iiba, and Kosuke Takano

Simulation and Re-engineering of Industrial Services: A Case Study from an Industrial Equipment Manufacturer ........................................................................................................................................484
Marcel Dix, Lennart Merkert, Zied Ouertani, Markus Aleksy, and Reinhard Bauer

C2C Web Transaction Reliability ..............................................................................................................490
Gulnar Ali and Kin Fun Li

The Entity-Attribute-Value Data Model in a Multi-tenant Shared Data Environment ........................................................................................................................................................................494
Torben Jastrow and Thomas Preuss

CADSA 2015 Workshop

Session 1: Cloud Computing Applications
A Cloud Federation Architecture ..........................................................................................................................498
Gianluca Zangara, Diego Terrana, Pietro Paolo Corso, Marco Ughetti, and Guido Montalbano

A Hybrid Model for Ranking Cloud Services ..................................................................................................504
Massimiliano De Benedetti, Fabio D’Urso, Fabrizio Messina, Giuseppe Pappalardo, and Corrado Santoro

The HtComp Research Project: An Overview ..................................................................................................................510
Alessandro Cilardo

An Architecture to Process Massive Vehicular Traffic Data ..............................................................................515
Simon Kwoczek, Sergio Di Martino, Thomas Rustemeyer, and Wolfgang Nejdl

A Cloud Based Architecture for Massive Sensor Data Analysis in Health Monitoring Systems ...............................................................521
Mario Barbareschi, Sara Romano, and Antonino Mazzeo

Session 2: Distributed Computing for Smart Cities
Model-Based Water Quality Assurance in Ground and Surface Provisioning Systems .............................................................527
Ugo Gentile, Stefano Marrone, Francesco De Paola, Roberto Nardone, Nicola Mazzocca, and Maurizio Giugni
### Session 3: Technologies for Distributed Applications

<table>

Designing a Subscription Service for Earthquake Big Data Analysis from Multiple Sources

Oladotun Omosebi, Stelios Sotiriadis, Eleana Asimakopoulou, Nik Bessis, Marcelo Trovati, and Richart Hill

DEM 2015 Workshop

Session 1: Distributed Embedded Software and Hardware

Soft Error Protection in Safety Critical Embedded Applications: An Overview

Jens Vankeirsbilck, Hans Hallez, and Jeroen Boydens

Hierarchical Real-Time Multi-core Scheduling through Virtualization: A Survey

Yorick De Bock, Jan Broeckhove, and Peter Hellinckx

Managing Heterogeneity in Model-Based Systems Engineering of Cyber-Physical Systems

Bert Van Acker, Joachim Denil, Hans Vangheluwe, and Paul De Meulenaere

DASH7 Alliance Protocol in Monitoring Applications

Glenn Ergeerts, Maciej Nikodem, Dragan Subotic, Tomasz Surmacz, Bartosz Wojciechowski, Paul De Meulenaere, and Maarten Weyn

Large Scale Distributed Localization Based on RSS and Mass-Spring Model

Bart Praats, Rafael Berkvens, Glenn Ergeerts, and Maarten Weyn

MWVRSTA 2015 Workshop

Session 1: Multimedia Systems and Applications

A Three-Dimensional Optical Image Cryptosystem Based on Integral Imaging

Liu Yiqun

A Real-Time Video Information Hiding Method Based on CAVLC Encoding

Yixiao Sun, Renjun Zhan, Gengrui Wu, and Yang Wu

Proposal of Information Acquisition Method Utilizing CCN in a Time of Large Scale Natural Disaster

Masaya Yamazaki, Kazuhiro Takahagi, Tomoyuki Ishida, Kaoru Sugita, Noriki Uchida, and Yoshitaka Shibata

A Preliminary Evaluation of Web Based Communication Services for Reducing Power Consumption

Ken Nishimura and Kaoru Sugita

Evaluation of Power Consumption for Multimedia Contents Considering Difference in Computer Skill and Devices

Kaoru Sugita, Ken Nishimura, and Masao Yokota
Fundamental Study on Simultaneous Display of Enormous Multimedia
Contents in Ultra-Resolution Display Environment ..................................................661
Yasuo Ebara

SecureSysComm 2015 Workshop

Session 1: Security in Cloud, Systems and Communication Networks

A Business Analysis of Cloud Computing: Data Security and Contract Lock-In
Issues ..........................................................................................................................665
Justice Opara-Martins, Reza Sahandi, and Feng Tian

Security in Cloud-Based Cyber-Physical Systems .....................................................671
Juha Puttonen, Samuel Olaifa Afolaranmi, Luis Gonzalez Moctezuma,
Andrei Lobov, and Jose L. Martinez Lastra

DoS Protection in the Cloud through the SPECS Services ........................................677
Valentina Casola, Alessandra De Benedictis, Massimiliano Rak,
and Umberto Villano

Sampling UAV Most Informative Diagnostic Signals .................................................683
Roberto Pietrantuono, Massimo Ficco, Stefano Russo, and Gabriella Gigante

On the Feasibility of Moderating a Peer-to-Peer CDN System: A
Proof-of-Concept Implementation ............................................................................689
Mauro Migliardi, Alessio Merlo, and Andrea Passaglia

The OFIDIA Fire Danger Rating System ................................................................695
M. Mirto, A. Mariello, A. Nuzzo, M. Mancini, A. Raolil, O. Marra, S. Fiore,
C. Sirca, M. Salis, V. Bacciu, D. Spano, and G. Aloisio

Session 2: Cyber-Physical Threats, Countermeasures and Security Tools

An Artificial Intelligence-Based Trust Model for Pervasive Computing ..................701
Gianni D’Angelo, Salvatore Rampone, and Francesco Palmieri

Reversible Copyright Protection for DNA Microarray Images .................................707
Raffaele Pizzolante, Arcangelo Castiglione, Bruno Carpentieri,
Alfredo De Santis, and Aniello Castiglione

Direct Debit Transactions: A Comprehensive Analysis of Emerging Attack
Patterns .......................................................................................................................713
Luigi Coppolino, Salvatore D’Antonio, Luigi Romano, Gaetano Papale,
Luigi Sgaglione, and Ferdinando Campanile

Lockup: A Software Tool to Harden iOS by Disabling Default Lockdown
Services .....................................................................................................................718
Luis Gómez-Miralles and Joan Arnedo-Moreno
Adapting an Ensemble of One-Class Classifiers for a Web-Layer Anomaly Detection System .......................................................... 724
Rafał Kozik and Michał Choraś

**SMDMS 2015 Workshop**

### Session 1: Stream Media Delivery and Management Systems

A Scheduling Method to Reduce Waiting Time for Close-Range Delivery ........................................ 730
Yusuke Gotoh and Tomoki Yoshihisa

A Radio Interference Aware Dynamic Channel Utilization Method on Software Defined WMN ............................................. 736
Yuzo Taenaka and Kazuya Tsukamoto

A P2P Sensor Data Stream Delivery System to Accommodate Heterogeneous Cycles Using Skip Graphs .................................................. 742
Tomoya Kawakami, Yoshimasa Ishi, Tomoki Yoshihisa, and Yuuichi Teranishi

A Sensor Data Stream Delivery System with Different Delivery Cycles for IoT Environments ............................................................ 748
Tomoki Yoshihisa, Yoshimasa Ishi, Kodai Mako, Tomoya Kawakami, and Yuuichi Teranishi

Dynamic Modification of Continuous Queries by Using RDF Metadata of Information Sources .......................................................... 754
Yousuke Watanabe and Haruo Yokota

**SMECS 2015 Workshop**

### Session 1: Modelling for Information Security

A Watermark Algorithm for Image Content Authentication and Correcting Errors in Terms of Pixels ........................................................ 760
Yixiao Sun, Renjun Zhan, Zhexin Han, and Qixiang Lin

Cascade Face Detection Based on Histograms of Oriented Gradients and Support Vector Machine .................................................. 766
Hua-chun Yang and Xu An Wang

Extensional Schemes of Multipartite Non-interactive Key Exchange from Multilinear Maps .......................................................... 771
Huiwen Jia, Yupu Hu, Xu An Wang, Zheliang Liu, and Wei Xiong

Survival Continuity on Intrusion Detection System of Wireless Sensor Networks ............................................................ 775
Zixin Zhou, Lei Liu, and Guijie Han
An Additively Homomorphic Encryption from Ideal Lattices .................................................................780
    Hu Chen, Yupu Hu, and Huiwen Jia
SPA Resistant Scalar Multiplication Based on Addition and Tripling
Indistinguishable on Elliptic Curve Cryptosystem ..............................................................................785
    Shuanggen Liu, Huatong Yao, and Xu An Wang

**Session 2: Networking Modelling and Simulation**

Instruction Clustering Analysis for Network Protocol’s Abnormal Behavior ........................................791
    Yanjing Hu, Liaojun Pang, Qingqi Pei, and Xu An Wang
Research on Web Intelligent Robot Based on Virtual Reality ..............................................................795
    Shuxia Ren, Dakun Zhang, Kunliang Liu, Tianyu Lu, and Guozhi Song
Deployment Method of Virtual Machine Cluster Based on Energy Minimization and Graph Cuts Theory ..........................................................................................................................800
    Zhiping Peng, Bo Xu, Delong Cui, Weiwei Lin, and XuAn Wang
A Content-Based Adaptive Event Routing Algorithm ..........................................................................804
    Liming Zheng and Xiaodong Li
Research on Identification and Addressing of the Internet of Things .................................................810
    Rui Ma, Yue Liu, Chun Shan, Xiaolin Zhao, and Xu An Wang
An Authentication Key Agreement Scheme for Heterogeneous Sensor Network Based on Improved Counting Bloom Filter ........................................................................................................815
    Jiuru Wang, Haifeng Wang, Xu An Wang, and Yunpeng Cao

**Session 3: Data Security Modelling and Performance**

Replacement Strategy of Web Cache Based on Data Mining .................................................................821
    Jing Zhang
FPGA-based Acceleration of Deep Neural Networks Using High Level Method .................................824
    Lei Liu, Jianlu Luo, Xiaoyan Deng, and Sikun Li
DOA Estimation Method Based on Neural Network .............................................................................828
    Zhang Ping
On Cloud Computing Middleware Architecture .......................................................................................832
    Jihua Yang, Longjun Zhang, and Xu An Wang
A Novel Privacy Preserving Keyword Search Scheme over Encrypted Cloud Data ..........................836
    Xiuxiu Jiang, Jia Yu, Fanyu Kong, Xiangguo Cheng, and Rong Hao
Analysis and Improvement of a Verifiable Phrase Search over Encrypted Data in a Single Phrase ..........................840
    Fanyu Kong, Jie Wang, Jia Yu, and Xuan Wang
Session 4: Encryption and Authentication Techniques

Proxy Re-signature Supporting Conditional Delegation ...............................................................844
  Xu An Wang

Design and Analysis of the Secure Scheme for Quantum Positioning Based
on Entangled Photon Pair ...........................................................................................................849
  Huang Hong-Mei and Xu Lu-Ping

Lattice-Based Dynamical and Anonymous Broadcast Encryption Scheme ........................853
  Wang Fenghe, Wang Xuan, and Wang Chunxiao

Ring Signature Scheme from Multilinear Maps in the Standard Model .................................859
  Xiangsong Zhang, Zhenhua Liu, and Xu’an Wang

A Tentative Study on MOOC-based Strategies of College Students’
Self-Learning Ability ..................................................................................................................865
  Liu Fang

A Zero-Knowledge Identification Scheme Based on Matrix Power Problem .......................868
  Huawei Huang, Lunzhi Deng, Yunyun Qu, and Chunhua Li

Author Index ................................................................................................................................872
