2016 Second International Symposium on Stochastic Models in Reliability Engineering, Life Science and Operations Management (SMRLO 2016)

Beer Sheva, Israel
15 – 18 February 2016
The Second International Symposium on Stochastic Models in Reliability Engineering, Life Science and Operations Management

SMRLO 2016

Table of Contents

Message from the Symposium Chairs.................................................................xvi
Message from the Stochastic Models and Methods in Life Sciences Section Chair.........................................................xvii
Message from the Stochastic Models and Methods in Operations Management Section Chair..........................................................xviii
Message from the Stochastic Models and Methods in Reliability Engineering Section Chair...........................................................xix
Organizing Committee..........................................................................................xx
Scientific Program Committee..............................................................................xxi
Reviewers...............................................................................................................xxiii

Opening Session

Application of Extended Universal Generating Function Technique to Dynamic Reliability Analysis of a Multi-state System .............................................................1
Anatoly Lisnianski

In Memory of Professor Igor Ushakov: In Memory of Our Colleague and Friend ..................................................11
Mikhail A. Yastrebenetsky and Alexander V. Bochkov
Section: Stochastic Models and Methods in Reliability Engineering

Plenary Sessions

New First Passage Times and Their Distributions .................................................................20
  Lirong Cui, Jianhui Chen, Hongda Gao, and Jingyuan Shen

Closed and Mixed Type Queuing Systems as Mathematical Models of Reliability and Survivability .................................................................23
  Revaz Kakubava, Archil Prangishvili, and Grigol Sokhadze

Stochastic Systems with Reworking ................................................................................29
  Gregory Levitin and Liudong Xing

Phase-Type Models for Competing Risks ........................................................................37
  Bo H. Lindqvist

Asymptotic Expansions for Stationary Distributions of Perturbed Semi-Markov Processes .........................................................................................41
  Dmitrii Silvestrov and Sergei Silvestrov

Reliability and Safety of Nuclear Power Plant Instrumentation and Control Systems: New Challenges and Solutions .........................................................47
  Mikhail Yastrebenetsky and Vyacheslav Kharchenko

Parallel Sessions

Stochastic Modelling in Reliability of Multi-state Mechanical Systems

On Semi-Markov Modelling and Inference for Multi-state Systems ..................................56
  Vlad Stefan Barbu, Alex Karagrigoriou, and Andreas Makrides

Multi-state Deteriorating System Dependability with Maintenance Using Monte Carlo Simulation .........................................................................................61
  Sonia Malefaki, Vasilis P. Koutras, and Agapios N. Platis

Models in Quality Engineering and Diagnostic Testing

A New Approach to Simultaneous Latent Ability & Test Difficulty Estimation ..................71
  Emil Bashkansky and Vladimir Turetsky

A Combinatorial Approach for Analyzing Start-Up Demonstration Tests ..........................76
  Amos E. Gera

Prognostic and Health Management for Suspended Time-Series .....................................81
  Sergey Porotsky and Zigmund Bluvband

Applied Stochastic Models in Technological Systems

Probabilistic Models for Wind Actions ................................................................. 172
  Milan Holicky and Miroslav Sykora

Resource Availability Optimization for a Point-to-Point Connection on
a Telecommunication Network ........................................................................... 176
  Christoforos Salagaras, Vasilis Koutras, Agapios Platis, and Ioannis Tsokos

Markov Modeling of the Availability of a Wind Turbine Utilizing Failures
and Real Weather Data ....................................................................................... 186
  Theodoros V. Tzioiutzias, Agapios N. Platis, and Vasilis P. Koutras

Software Reliability and Clustering

Brain Inspired Automatic Directory ..................................................................... 197
  Itay Azaria, Shlomi Dolev, Ariel Hanemann, and Rami Puzis

Impact of Wind Power Scenario Reduction Techniques on Stochastic Unit
Commitment ........................................................................................................... 202
  Ershun Du, Ning Zhang, Chongqing Kang, Jianhua Bai, Lu Cheng, and Yi Ding

Combined Approach to Reliability of Great Software Complexes for Distributed
Computing with Big Data in Contemporary Physical Experiments ..................... 211
  Gennady Ososkov

Recent Advances in System Signatures and Their
Applications to System Reliability

D-Spectra for Networks with Binary and Ternary Components .............................. 217
  Ilya B. Gertsbakh, Yoseph Shpungin, and Radislav Vaisman

Distribution-Free Comparisons of Coherent Systems .......................................... 221
  Jorge Navarro

Maintenance Modelling

Towards an Efficient and Robust Maintenance Decision-Making .......................... 225
  Hajar Cherkaoui, Khac Tuan Huynh, and Antoine Grall

Optimal Imperfect Maintenance in a Multi-state System with Two Failure Types ........... 233
  Stephanie Dietrich and Waltraud Kahle

Adaptive Management System of Dependability and Safety of Railway
Infrastructure ........................................................................................................ 244
  Alexey Zamyshlyaev and Igor Shubinsky
Stochastic Processes and Continuous Time Random Walks

The Analytical Approach to Recurrent Markov Chains Alternative to the Splitting Method and Its Applications ................................................................. 251
Sergei Nagaev

Nonparametric Inference for Location Parameters via Fréchet Functions ......................................................... 254
Vic Patrangenaru, Ruite Guo, and K. David Yao

Game Theory and Applications

The Game on the Risk in Deviating from Nash Equilibrium ............................................................................. 263
Irit Nowik

Detecting the Maintenance Disruption in Competitive Queue ................................................................. 274
Krzysztof J. Szajowski

Stochastic Processes and Related Topics

Stochastic Models of Charge Transport in Disordered Media ........................................................................... 284
Tim Brereton and Volker Schmidt

A Weibull Model with Time-Varying Scale Parameter for Modeling Failure Processes of Repairable Systems ............................................................................. 292
R. Jiang

Approach for Inferring Fractiles of Future Time between Failures ............................................................. 296
R. Jiang

Some Inequalities for Distributions with Monotone Hazard Rate ..................................................................... 300
Nikolai Ushakov and Vladimir Ushakov

Statistical Models and Methods in Reliability Engineering

The Normalizing Flow Function Model to Reliability Analysis of the Renewal Objects ................................................................. 303
Alexander Antonov and Valery Chepurko

Stochastic Analysis of Systems Exposed to Very Unlikely Faults ....................................................................... 310
Dariusz Caban and Tomasz Walkowiak

Dependence Structures in Politics and in Reliability ......................................................................................... 318
Sahib Esa and Boyan Dimitrov

Effective Bandwidth Estimation in Highly Reliable Regenerative Networks .......................................................... 323
Ksenia Kalinina, Evsey Morozov, and Vladimir Rykov
Nuclear Power Plants Control Systems Reliability

Markov's Modeling of NPP I&C Reliability and Safety: Optimization of Tool-and-Technique Selection ..............................................................................................................328
Vyacheslav Kharchenko, Valentina Butenko, Oleg Odarushchenko, and Elena Odarushchenko

Automation of Quantitative Requirements Determination to Software Reliability of Safety Critical NPP I&C Systems .........................................................................................................337
Bohdan Volochiy, Oleksandr Mulyak, Leonid Ozirkovskyi, and Vyacheslav Kharchenko

Safety Estimation of Critical NPP I&C Systems via State Space Method .................................................................347
Bohdan Volochiy, Leonid Ozirkovskyy, Oleksandr Mulyak, and Sergiy Volochiy

Multi-state Systems Reliability (Students Session)

Availability and Unloading Capacity Assessment of Multi-state Material Handling System, Operate in a Stochastic Environment and Material Handling
Stochastic Demand .......................................................................................................................................................357
Sagi Finish, Marina Felsin, Ilia Frenkel, and Lev Khvatskin

On Availability Determination for MSS Cold Water Supply System by Lz-Transform: Case Study ..........................................................................................................................365
Pavel Lein, Ilia Frenkel, and Lev Khvatskin

On Markov Reward Approach to Failure Criticality Importance Assessment for Aging Multi-state System ..........................................................................................................................375
Shay Toledano, Inna Gartsman, Guy Avitan, Ilia Frenkel, and Lev Khvatskin

Section: Stochastic Models and Methods in Life Sciences

Plenary Sessions

On Remaining Lifetimes with Random Initial Age. A New Insight ...........................................................................380
Maxim Finkelstein

Mathematical Theory of Reliability and Aging: Teaching Comes from Kiev .................................................................386
Vitaly K. Koltover

Stochastic Modeling of Multi-state Disease Dynamics under Random Environments .................................................................................................................................................393
M. Manoharan and T. D. Xavier

Resistance to Stresses and Reliability of Biological Systems: Insights for Genetic Studies of Human Aging, Health, and Longevity .................................................................................403
Parallel Sessions

Statistical Methods in Genome Biology and Bioinformatics

Parallel Clustering of Protein Structures Generated via Stochastic Monte Carlo .................................................410
Simon Dexter, Gavriel Yarmish, and Philip Listowsky

Organizational Heterogeneity of the Human Genome: Significant Variation of Recombination Rate of 100 kbp Sequences within GC Ranges .................................................................414
Svetlana Frenkel, Valery Kirzhner, Zeev Frenkel, and Abraham B. Korol

Weak Signal Carried by Chromatin DNA Sequences: Zooming In and Sobering Surprises ..................................................421
Edward N Trifonov

Stochastic Methods and Models in Biological and Physical Problems

Stochastic Equations and Inclusions with Mean Derivatives and Their Applications to Mathematical Physics .........................................................426
Yuri Gliklikh

Some Processes and Models on Deformed Stochastic Bases ...................................................................................432
Igor Pavlov

Statistical Models and Methods in Medicine and Health Care

Markov Model of Disease Development and Recovery ............................................................................438
Michał Krzemiński

Assistance to Palliative Pediatric Patients: Simulation Model .................................................................443
Giorgio Romanin-Jacur, Giorgia Mondin, Arturo Liguori, and Francesca Menegazzo

Optimal Screening Interval for a Person Vulnerable to Venereal Disease ..................................................448
Qing Wei, Wenbin Wang, Rui Peng, and Yi Ding

Recent Developments in Divergent Measures

Frailty Modeling and Penalized Likelihood Methodology .................................................................451
Filia Vonta, Christos Koukouvinos, and Emmanouil Androulakis
Section: Stochastic Models and Methods in Operations Management

Plenary Sessions

Human Factor in Mining Machines Maintenance Operations ..................................................456
Ljubisa Papic and Srdja Kovacevic

Human Factor in Quality Function Deployment ......................................................................466
Yury Klochkov, Elena Klochkova, Anna Volgina, and Sergey Dementiev

Statistical Analysis in the DEA Context ..................................................................................469
Zilla Sinuany-Stern and Lea Friedman

About the Effectiveness of the Statistical Sequential Analysis in the Reliability Trials ........................................475
Grodzenskiy Sergey, Grodzenskiy Yakov, and Chesalin Alexander

Risk Management System on the Railway Transport ..............................................................481
Igor Shubinsky and Aleksey Zamyshlyaev

Parallel Sessions

Stochastic Models in Operation Management

Determining Manager's Load & Control Span by Modeling Management as a Service Activity ..................................................................................................................487
Yuval Cohen, Shai Rozenes, and Maurizio Faccio

Procurement from Global, Unreliable, All-or-Nothing Suppliers ........................................490
Yigal Gerchak

ABC Inventory Classification Using AHP and Ranking Methods via DEA ................................495
Baruch Keren and Yossi Hadad

Statistical Models and Methods in Ecological and Environmental Protection

Branching of Cracks That Spread in Rocks ........................................................................502
Sergey Kryzhevich and Maria Kryzhevich

Stochastic Models in Finance and Insurance

Estimation of the Present Values of Life Annuities for the Different Actuarial Models .................................................................506
Gennady M. Koshkin and Oxana V. Gubina

Small Business Valuation with Use of Cash Flow Stochastic Modeling ................................511
Ian Leifer and Leifer Lev
Modeling Asymmetry of Information for a Sample of the Chilean Companies Using Deterministic and Stochastic Methodologies ................................................................. 517
Hanns De La Fuente-Mella, David Cademartori-Rosso,
Berta Silva-Palavecinos, Ricardo Campos-Espinoza, and Alexander Paz

Herd Behaviour in the Pension Fund Administrators in Chile: A Correlation
and Cointegration Analysis .............................................................................. 524
Claudina Rubilar-Maturana, César Venegas-Piñeda,
Ana María Vallina-Hernández, and Hanns De La Fuente-Mella

Human Factor in Industrial Engineering
Assessment of Organization Development Speed Based on the Analysis
of Standards Efficiency ...................................................................................... 530
Yury Klochkov, Albina Gazizulina, and Nikita Golovin

Forecasting of Staff Resistance Level in the Process of Introduction of New
Standards ........................................................................................................ 533
Yury Klochkov, Elena Klochkova, and Irina Vasilieva

The Role of Young Engineering Graduates in Europe and Latin America .............. 536
Angela María Grisales Del Ríó, Andrés Carrión García, and José Ginés Mora Ruiz

Stochastic Models and Methods in Inventory and Chains of Supply
Bilevel Natural Gas Cash-Out Problems: Deterministic and Stochastic
Approaches ...................................................................................................... 544
Vyacheslav Kalashnikov, Nataliya Kalashnykova, and Felipe J. Castillo-Pérez

Obtaining the Optimal Order Quantities through Asymptotic Distributions of
the Stockout Duration and Demand ................................................................ 556
Anna V. Kitaeva and Natalia V. Stepanowa

How Does Supply Network Evolution and Its Topological Structure Impact
Supply Chain Performance? ........................................................................... 562
Penina Orenstein

Locally Optimal Inventory Control with Time Delay in Deliveries
and Incomplete Information on Demand .......................................................... 570
Valery I. Smagin, Gennady M. Koshkin, and Konstantin S. Kim

Application for Decision-Making in Transportation Logistics Function: Supply
Chain Colombian Green Coffee ....................................................................... 575
Johanna Trujillo Díaz, Javier Dario Vallejo Cubillos, and Holman Bolivar
Applications of Stochastic and Robust Optimization for Scheduling Problems
Stochastic Model for Project Performance Control ...............................................................583
Pavel Grabov and Amnon Sommer
Algorithmic Solutions for Optimal Switching Problems ..................................................586
Juri Hinz and Jeremy Yee
Solving Control Problems with Linear State Dynamics - A Practical User Guide ................591
Juri Hinz and Jeremy Yee

The Future of the Healthy Space
The Multifunctional Town - A Sustainable Development of the Town of Oswiecim ..........................................................597
Bartosz Janik
Health - Promoting Nature of the Urban Space ..................................................................605
Justyna Kobylarczyk
Adaptation of Small Towns to Urban Strengthening ..........................................................609
Krystyna Paprzyca

Information Systems Analysis and Design
An Algorithms for Solving Extended Bin Packing Problem for Efficient Storage of Digital Information ..................................................613
Svetlana Daichman and Boris Efros
Lempel-Ziv-Welch Compression Algorithm with Exponential Decay .................................616
Sergey Frenkel, Marina Kopeetsky, and Roman Molotkovski
Nonparametric Algorithms of Identification and Prediction in the ARX-Models ................620
Gennady M. Koshkin, Vadim Yu. Lukov, and Iosif G. Piven

Stochastic Models and Methods in Manufacturing
Distribution-Free Models for Machine Interference Problems .............................................624
Gregory Gurevich, Baruch Keren, and Yossi Hadad
An M/M/1-Type Queue with an Individual Deterministic Retrial Rate ...............................630
Yair Y. Shaki, Moshe Haviv, and Uri Yechiel

Statistical Models in Transport Systems
Portable Heat Exchanger to Purify Water ...........................................................................633
Gaurav Gupta, Sanjram Pk, and Devendra Deshmukh
Corridor Singe Window as an Innovative Instrument Ensuring Integrity of the Entire Supply Chain of the Transport Corridor ..........................................................................................638
   Algirdas Šakalys, Laima Greičiūnė, and Raimondas Šakalys

Holistic Approach to Passenger Terminal Risk Estimation .................................................................................................643
   Irina Yatskiv (Jackiva) and Vaira Gromule

**Risk Assessment and Risk Analysis in Engineering**

The Use of Discrete Rate Simulation Paradigm to Build Models of Inventory Control Systems ..........................................................................................................................650
   Aivars Muravjovs, Juris Tolujevs, and Irina Yatskiv

Bayesian Network Application for the Risk Assessment of Existing Energy Production Units .................................................................................................................................656
   Miroslav Sykora, Jana Markova, and Dimitris Diamantidis

**Author Index** ....................................................................................................................................................................665
