## Contents

Preface ................................................................................................. 0.ix

Organization ................................................................................... 0.xi

External Reviewers ......................................................................... 0.xiii

List of Authors ................................................................................ 0.xv

ICDT 2016 Test of Time Award

The ICDT 2016 Test of Time Award Announcement
    Foto N. Afrati, Claire David, and Georg Gottlob ................................. 1:1–1:2

Invited Talks

Scale Independence: Using Small Data to Answer Queries on Big Data
    Floris Geerts ................................................................. 2:1–2:2

Top-k Indexes Made Small and Sweet
    Yufei Tao ................................................................. 3:1–3:1

New Algorithms for Heavy Hitters in Data Streams
    David P. Woodruff ....................................................... 4:1–4:12

Awards Session

Beyond Well-designed SPARQL
    Mark Kaminski and Egor V. Kostylev ........................................... 5:1–5:18

A Framework for Estimating Stream Expression Cardinalities
    Anirban Dasgupta, Kevin J. Lang, Lee Rhodes, and Justin Thaler ........ 6:1–6:17

(Regular Paper)
Declarative Probabilistic Programming with Datalog
    Vince Barany, Balder ten Cate, Benny Kimelfeld, Dan Olteanu,
    and Zografoula Vagena ............................................. 7:1–7:19

Distribution and Paralellism

Worst-Case Optimal Algorithms for Parallel Query Processing
    Paraschos Koutris, Paul Beame, and Dan Suciu ............................... 8:1–8:18

Parallel-Correctness and Containment for Conjunctive Queries with Union and
    Negation
    Gaetano Geck, Bas Ketsman, Frank Neven, and Thomas Schwentick .......... 9:1–9:17

19th International Conference on Database Theory (ICDT 2016).
Editors: Wim Martens and Thomas Zeume
Leibniz International Proceedings in Informatics
LIPICS Schloss Dagstuhl – Leibniz-Zentrum für Informatik, Dagstuhl Publishing, Germany
A Formal Study of Collaborative Access Control in Distributed Datalog
   Serge Abiteboul, Pierre Bourhis, and Victor Vianu ............................... 10:1–10:17

Optimization

It’s All a Matter of Degree: Using Degree Information to Optimize Multiway Joins
   Manas R. Joglekar and Christopher M. Ré ....................................... 11:1–11:17
Filtering With the Crowd: CrowdScreen Revisited
   Benoît Groz, Ezra Levin, Isaac Meilijson, and Tova Milo ....................... 12:1–12:18
Streaming Partitioning of Sequences and Trees

Evolving Data

Dynamic Graph Queries
   Pablo Muñoz, Nils Vortmeier, and Thomas Zeume ............................... 14:1–14:18
Verification of Evolving Graph-structured Data under Expressive Path Constraints
   Diego Calvanese, Magdalena Ortiz, and Mantas Šimkus ........................... 15:1–15:19
Query Stability in Monotonic Data-Aware Business Processes
   Ognjen Savković, Elisa Marengo, and Werner Nutt ............................... 16:1–16:18

Data Extraction and Analytics

Document Spanners: From Expressive Power to Decision Problems
   Dominik D. Freydenberger and Mario Holldack .................................. 17:1–17:17
Algorithms for Provisioning Queries and Analytics
   Sepehr Assadi, Sanjeev Khanna, Yang Li, and Val Tannen ....................... 18:1–18:18

Schemas and Consistency

Limits of Schema Mappings
   Phokion G. Kolaitis, Reinhard Pichler, Emanuel Sallinger, and Vadim Savenkov . 19:1–19:17
Reasoning About Integrity Constraints for Tree-structured Data
   Wojciech Czerwiński, Claire David, Filip Murlak, and Paweł Parys .............. 20:1–20:18
Complexity of Repair Checking and Consistent Query Answering
   Sebastian Arming, Reinhard Pichler, and Emanuel Sallinger ..................... 21:1–21:18

SPARQL and Graphs

On the Complexity of Enumerating the Answers to Well-designed Pattern Trees
